Today

THRIFTS & MORTGAGES

Three East Coast thrifts, having established a beachhead in California, are eagerly awaiting a further shakeout in the financial services industry in that state. Each of the three is profiled. 6

Buyers have been scarce for thrift stocks since the market crash. 8

Industry turmoil over the past year has significantly reduced the growth in the number of active thrift holding companies, an *American Banker* survey finds. 9

Neworld Bank for Savings is restructuring its 23 branches into six regions, or "community banks." 12

INSIDE

Congressman Doug Barnard Jr. plans to introduce legislation calling for the creation of a federal agency to write real estate appraisal standards for commercial banks, thrifts, credit unions, and federal mortgage agencies. 2

James Tozer Jr., one of Marine Midland Bank's top five executives, will resign next month. 2

Bank of New York Co. told federal regulators that it wants to keep its effort to acquire Irving Bank Corp. "on a high plane" but will consider mounting a proxy fight to replace Irving's directors if they continue treating its $1.4 billion offer as hostile. 2

A proposed federal agency that would oversee a secondary market in farm real estate loans cleared an important hurdle as the Senate Agriculture Committee unanimously reported out a Farm Credit System rescue package. 2

Insurance companies have become ready sources of funds for private companies looking for fixed-rate loans. 3

Union National Corp. of Pittsburgh and Pennbancorp of Titusville, Pa., signed a definitive agreement to merge in what officials are calling a merger of equals. 36

COMMENT

Bankers frequently overlook the use of factoring as a financial tool in their quest to structure increasingly complex lending arrangements, writes Francis X. Basile. 4

Some Rural Banks Burned by Bond Trading

Bad Gambles on Interest Rates Cited in 4 Failures and Several 'Near Misses'

By ANDREA BENNETT
Midwest Bureau

CHICAGO — When regulators closed a small rural bank in Wilmont, Minn., earlier this year, it was not just another agricultural bank failure.

The First National Bank of Wilmont's downfall came not from problem loans, but speculative bond trading. The $12.9 million-asset bank's capital was wiped out after the interest-rate spike in April battered the bond market.

And regulators say what happened to the Minnesota bank is not an isolated incident.

Some rural bankers, looking for ways to boost earnings and pressured by aggressive brokers, have turned from conservative investment strategies to gambling on interest rates. The result in some cases has been disaster.

Since May, the failure of four rural banks in Kansas and Minnesota has been attributed to speculative bond trading. Regulators in Iowa and Kansas say they have also had several "near misses" because of heavy securities losses.

Other failures could follow. "It wouldn't surprise me," said Michael Hatch, Minnesota commerce commissioner.

Rural banks are not the only ones to get burned by the tumble in bond prices. The $27.5 billion-asset First Bank System Inc. of Minneapolis recently announced that rising interest rates had led to an unrealized loss of $640 million on its $8 billion bond portfolio at Sept. 30.

But rural banks are especially attracted to the securities market because the long downward slide in earnings through most of the decade has made them scramble to get profit margins up again. Some banks found they could make more in the booming bond market than from agricultural loans.

Hostile Takeovers

I COULD BE WRONG — yes, truly, it has happened — but I've always felt that hostile takeovers in the banking business occur only when the regulators want them to occur.

If T. Boone Pickens wants to buy a pharmaceutical company to assure himself a supply of aspirin, he can have his lawyers do a little mumbo-jumbo with Hart-Scott-Rodino and the Williams Act, and go out and buy stock until the party of the second part cries uncle.

The scary look of the people who will jump on his bandwagon may even make it easier for him to convince reluctant targets that their best course is to roll over and enjoy it. And if it turns out he's made a mistake and picks up a company that ought to have been left lying there, he loses money and begins looking around for ways to cut his losses. *Tant pis,* as they say in France: that's capitalism.

But if Mr. Pickens wishes to buy a bank, he has to make a sale to bureaucrats. Worse, he must convince them that he is a good guy, and that this is a good deal not only for him and the proprietors of the acquired bank, but also for the bank's customers and for the Community in which this bank must Reinvest.

If need be, a regulator wishing to bar an acquisition still has the splendid excuse of the "potential competition" doctrine, which holds that a bank barred from acquisition can enter a market by starting a branch or subsidiary de novo, and thus that any acquisition could over time reduce service to the public. Moreover, the

Regulator Clears Insurance Powers For Citibank Unit

By JED HOROWITZ

NEW YORK — The New York State Banking Board unanimously approved Citibank (New York State) NA's application to create a capital markets insurance corporation called CapMac Holdings Inc.

As previously reported, the unit will focus initially on selling guarantees to issuers of commercial paper and other corporate debt.

But insuring corporate securities is only a first step for CapMac, according to banking and insurance sources. Citicorp reportedly is seeking regulatory approval for CapMac to purchase a New York property and casualty company indirectly owned by H.F. Ahmanson & Co.

LENDER'S CORNER

Bankers Continue to Overlook Factoring as a Financing Tool

By FRANCIS X. BASILE

WHEN ASKED to speak or write about factoring, industry executives frequently seem to seek a defensive position from which to begin. This reaction stems from what I perceive to be a general misunderstanding of our industry, the services we provide, and the client base we serve.

Unfortunately, this lack of understanding comes not only from the businesses unaccustomed to factoring, but also from the banking world at large. Bankers frequently overlook factors in their quest to structure increasingly complex lending arrangements, forgetting that factoring has often been the catalyst in making such potential transactions work.

Nevertheless, interest in factoring by the banking industry has a long, although sometimes tumultuous, history.

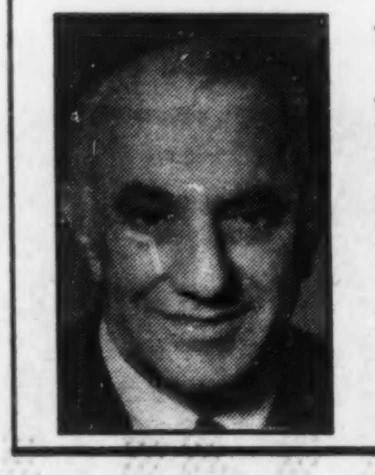
Banks first recognized the value of factors in the early 1900s, occasionally serving as referral sources to companies desiring the service. But a major milestone was reached in 1937 when the Bank of America began a factoring division followed two years later by what was then a small southern bank, Trust Company of Georgia.

In 1946, The First National Bank of Boston began its factoring unit, which along with Trust Company, continues to exert strong influence today.

The mid-1960s brought banking and factoring even closer. Over a period of six years, 16 major banks bought 18 independent factoring companies. One acquisition was the purchase by Manufacturers Hanover of Iselin Jefferson Financial Co., with which I was associated.

It is my general impression that bank officers thought they could build market share through rate cutting, aggressive credit policies, "professional" management, and cross-industry expansion.

For the most part, the banks did not achieve the desired effect.Rate cutting merely lowered margins, and some of the highly aggressive credit policies instituted to build market share resulted in writeoffs that caused some banks to rethink their position.



> **F**actors have an unparalleled ability to help a business grow to its potential — as well as provide assistance to troubled accounts — because of industry specialization and the discipline inherent in formula lending..
>
> — Francis X. Basile

By the 1980s several major banks left factoring, their former units consolidating with others. In 1981 there were 35 major factors. Today there are 23, of which 75% are owned by banks.

The large have become larger. The top five factoring organizations controlled more than 50% of the industry volume in 1986.

More important than the history is the state of factoring today and how factoring and banking industries can work together to develop, expand, and strengthen mutual interests.

To begin, perhaps a clarification of factoring might be in order. Factoring is really two separate businesses in one, breeding a major misconception. First and foremost, factoring remains a service industry providing an important link between our contract partner, or the client, and his customer.

It is from the customer that orders are placed with the client and credit evaluated and approved by the factor. Then the product is shipped by the client to the customer.

Accounts receivable bookkeeping, collection, and cash application rest with the factor. Of course, the services rendered, including the credit guarantee concept, are the cornerstone of the relationship, with the factor removing the potential of bad debts.

As data processing capabilities have increased, a myriad of management reports are generated out of the system for the client's use, allowing complete understanding of the receivables status at any time — but without the expense of in-house staff.

For these services the factor charges a commission. If lending is not involved, the commission becomes the only fee the client pays.

While contracts vary by industry, customer distribution, and the amount of paper handling involved, a typical charge for a client generating annual sales of $5 million runs about 1%, or $50,000 a year.

The second aspect of factoring is lending. In its most common form, the factor advances funds to its client against the receivables it has purchased, providing instant working capital and cash flow. This allows the client to control borrowing on an "as needed" basis.

As our clients' businesses have become more complex, so have our lending accommodations. In addition to advances against accounts receivable, factors provide clients with a complete menu of financial accommodations.

We provide advances for seasonal inventory buildups, letters of credit for importers, term financing for machinery or real estate expansion, and funding of foreign exchange purchases and export factoring.

In addition, factoring has become an important tool in leveraged buyouts, at times individually and at other times in participation with other forms of lending. It has provided funds, industry expertise, and the management tools to make transactions that could not have been structured otherwise.

The interest rates charged by reputable "old line" factors are competitive with other conventional lenders.

Today, even Wall Street uses factoring on occasion — or at least techniques that look suspiciously like it.

In 1985, Coca-Cola Co. and Salomon Brothers Inc. sold the receivables of Columbia Pictures to free $630 million tied to syndication sales. Coca-Cola was able to bypass traditional borrowing routes, save an estimated $5 million, and eliminate the expense of collections.

Recently, *The Wall Street Journal* reported a new twist to the practice of factoring. Mattel Inc., Michelin Tire Corp., and Union Carbide Corp. sold receivables to a third party that used them to back a securities offering. Union Carbide alone estimated after-tax savings of $1.25 million per year over other types of available financing.

This may not be the normal concept of factoring, but it is, surprisingly, quite similar. Some of you have probably been involved in factoring for years without knowing it. The popular credit card programs sponsored by the banking industry are factoring, although at the consumer level and at rates considerably above those of the traditional factoring community.

This brings up the future of factoring and the industry's ability to provide new or different services to an expanding client base. History and tradition have wedded factoring to the textile industry. But consolidations and change in domestic textiles indicate future growth is limited.

The expansion of factoring in recent years has been in the so-called retail area. This encompasses distribution from companies to the retailer or mass merchandiser, rather than the traditional manufacturer-to-manufacturer distribution from which factoring evolved.

Factoring apparel was a natural outgrowth of the domestic textile industry. Factoring has also received wide acceptance in home furnishings, footwear, furniture, and carpets and to a lesser extent in sporting goods, hardware, and frozen foods.

The rapidly expanding service economy in this country could be the next growth area for factoring. European counterparts have found ways to tailor their product to the needs of service businesses and have built substantial portfolios with good profit margins.

While we continue to look for additional areas of growth, it appears that substantial expansion can be achieved in our traditional areas. A study done a few years ago showed factoring had a penetration rate of less than 20% in the industries we supposedly "own."

Many of the industries recently penetrated by factors were first entered with the help of the banking community, which recognized a need for our expertise and introduced us as part of the transaction.

We continue to look for the opportunity to participate with banks in either structuring a transaction from the beginning or coming into an existing relationship to make the lender more comfortable and often more secure.

Factors have an unparalleled ability to help a business grow to its potential — as well as provide assistance to troubled accounts — because of industry specialization and the discipline inherent in formula lending.

Working with the banking community, we can provide excellent service and flexible financing programs from the simplest startup operation to the most complex leveraged buyout. This can result in relationships from which all can gain; the factor, the bank, and, most importantly, our clients. ■

Mr. Basile is president and chief executive officer of the CIT Group/Factoring, which is a subsidiary of Manufacturers Hanover Corp. He also is vice president of the National Commercial Finance Association.

LETTERS TO THE EDITOR

FDIC Official Clarifies Small-Bank-Aid Policy

To the Editor:

Bob Sablatura's Oct. 7 report from Houston ["Investors Fault FDIC for Hindering Takeovers of Small Banks," p. 22] may have left the *American Banker* readers with the impression that the Federal Deposit Insurance Corp. employs a double standard under which only large banks are helped by our open-bank-assistance program. We would like to correct that misimpression.

All open-bank-assistance requests are subject to the approval qualifications set forth in section 13(c) of the Federal Deposit Insurance Act. Of the seven assistance agreements consummated this year, only two have involved banking systems larger than $100 million in assets — the $1.2 billion Syracuse Savings Bank and the 11 institutions of the $1.3 billion Banc-Texas Group Inc. The five remaining agreements involved banks ranging in size from $10.3 million to $28.3 million.

We also would like to correct the assertion that a bank that has been unsuccessful in obtaining assistance in acquiring a troubled bank is barred from bidding on that same bank if it eventually fails. The banker to whom this comment was attributed is misinformed. It is not and never has been the FDIC's policy to bar banks which have submitted assistance requests from bidding if they are otherwise qualified.

In many instances, banks that have requested FDIC assistance to acquire a failing bank are not considered either financially or managerially qualified to bid. Perhaps this fact has led some banks to believe they were not allowed to bid because they had requested assistance.

Director, Corporate Communications
Federal Deposit Insurance Corp.

Thrift Formation Rate Slows in '87

By L. MICHAEL CACACE

NEW YORK

THE TURMOIL in the thrift industry over the past year has reduced significantly the growth in the number of active thrift holding companies, an *American Banker* survey finds. Growth this year is a quarter of the growth rate for 1986 and one-eighth of the growth rate over the past five years.

The significant slowdown in the growth of thrift holding companies this year was attributable to the sizable number of unhealthy thrifts in the Oil and Farm belts — especially in Texas — and the resultant insolvency of the Federal Savings and Loan Insurance Corp. As a result of these factors, a large number of Texas thrift holding companies ceased operations, and diversified nonthrift companies were discouraged from entering the thrift industry.

Thrift Holding Company Tables
Page 24

These are some of the findings of the *American Banker's* annual survey of thrift holding companies. This study lists all 303 active holding companies geographically, and it ranks the top 50 thrift holding companies by their total assets on Dec. 31, 1986.

The number of active thrift holding companies rose from 293 on Dec. 31, 1986, to 303 as of October 1987. On an annual basis, the growth rate is only 4.1%. In 1986, thrift holding companies' growth was 15.4%, and over the five-year period of 1981-86, the number of thrift holding companies grew at an annual rate of 32.4% per year.

The survey finds that from September 1986 to October 1987, 23 new thrift holding companies were formed. Of the 23, one was Texas-based. Over the same period, 16 holding companies ceased operations. Of the 16, nine were located in Texas.

Of the 23 thrift holding companies formed since September 1986, only two are classified as diversified companies. A diversified thrift holding company is a company whose thrift-related activities constitute less than 50% of the company's consolidated net worth. As of October 1987, 36 of the 303 thrift holding companies, or 11.8%, were diversified companies. As of September 1986 — the date of the previous survey — diversified companies accounted for 12.1% of the holding company total.

Although holding company growth was dampened by market factors this year, analysts are bullish on the formation of new thrift holding companies in the near future. Analysts believe that the Federal Reserve Board will permit bank holding companies to acquire healthy FSLIC-insured thrifts. Currently, bank holding companies can only acquire FDIC-insured thrifts and ailing FSLIC-insured thrifts.

In addition, a sizable number of capital-rich stock thrifts in New England are in the process of forming holding companies to enable them to buy back some of their own stock. In addition, it will enable them to acquire another thrift, retain its name, and maintain customer identification with the acquired institution. ■

If she were your mother, would you suggest a high-risk investment for her savings?

You wouldn't on purpose. You might, unintentionally.

Since deregulation, banks and thrifts can offer a wide variety of investment products. And quality and risk vary all over the lot.

So your due diligence responsibility is greater than ever. You need to know the details of the products you offer. The quality of your vendor, their financial underpinnings, their investment philosophy.

Here are some facts about GNA.

Our consolidated life insurance companies are "A" rated by A.M. Best. We tailor quality products for your customers — annuities, high interest insurance and securities. We respect the integrity of your customer relationships and work to strengthen them.

We're conservative in our investment policies, investing your customers' savings in government-backed securities, investment grade corporate bonds and adjustable rate commercial mortgages. No common or preferred stocks. No construction loans. No second mortgages.

Weyerhaeuser Company, our corporate parent, is a Fortune 100 firm.

For a copy of our Due Diligence Checklist, call Hans Carstensen at 1-800-426-5520 (in Washington state, 1-800-732-1231). It's a good way for you to examine and compare vendors. We'll also send a current financial statement.

The best in the business.

Big E Plots Growth In California Soil

➵ **Continued from Page 6**

tors to approve Empire's ambitious plans. These could be constrained under the higher capital standards being required of thrifts.

"If we're limited to growth within the regulatory requirements, we would not be able to double or triple our size within the next three or four years," concedes Mr. Carr.

Regulators also can help in other ways, he said.

"We would be hopeful that, if they make an attempt to dispose of some of the more troubled institutions [in California], that we be favorably looked at as a potential acquirer," he said.

Empire entered the state in 1984, when it purchased Woodland Hills-based Pacific Thrift and Loan Co. for $19.3 million in cash. Last year, with assistance from the Federal Savings and Loan Insurance Corp., it acquired San Francisco-based Atlas Savings and Loan Association and Windsor-based Golden Pacific Savings and Loan Association.

All three were merged to form Empire of America-California Federal Savings Bank. This thrift is now concentrating on strengthening its presence in Southern California, where 15 of its 19 offices are located.

Nevertheless, Mr. Carr said: "We will continue to look for opportunities in the San Francisco Bay area and along the coast down to San Diego."

Empire is using price as a means of obtaining market share. For example, its Visa card carries an interest rate of 13.75%. For a time, Empire's six-month and one-year certificates of deposit offered a 50-basis-point premium over rates offered by others. Pricing varies from market to market, Mr. Carr said.

Product diversification also is used to increase business and boost profitabili-

A Listing of Thrift Holding Companies in Operation on Dec. 31. 1986. **Thrift Holding Company** is a company controlling an insured savings and loan or savings bank. Control is defined as owning, controlling, holding with power to vote, or having control of proxies representing more than 25% of the voting shares of an insured insitution. Direct control means that there is only one holding company in the organizational structure of the company. Indirect control means that the holding company at the apex of the organization controls the thrift institution through one or more other holding companies. **Total Assets** are consolidated assets for the parent company and all its subsidiaries, whenever possible. However, some companies at the apex of an indirect holding company system do not report consolidated assets including their thrift subsidiaries. In these cases, the assets of a member of the indirect holding company system are used. **Thrift Deposits Controlled** are the total deposits of holding company's thrift subsidiary. For multiple thrift holding companies, coimbined total deposits for all of these subsidiaries are used, whenever possible. **Net Income:** income after taxes and loan loss provisions, but before extraordinary items is used. If a company has more than one thrift subsidiary, the combined net income for all of these institutions is used, whenever possible. **(a)— Types: D**—Diversified, **N**—Non-Diversified. **(b)**— If a holding company owns more than one savings institution, as indicated in the last column, the name of the largest institution is reported below the name of the company. **(‡)**— A middle-tier holding company in an indirect holding company system. **(c)**— Holding company data are for fiscal year ended June 30, 1987. **(d)**— MCO Holdings Federated Development Co., Houston, is at the apex of the holding company system. **(e)**— FGI Voting Trust, Miami, is at the apex of the holding company system. **(f)**— Holding company data for 1986 are for fiscal year ended Oct. 31, and for 1985 the data are for fiscal year ended July 31. Assets are for the company and its significant majority-owned affiliates other than its finance subsidiary. Associates First Capital Corp., the finance subsidiary and immediate parent of the thrift, had $9.27 billion in assets on 10/31/86 and net income of $176.6 million for the year ended 10/31/86. **(g)**— Dana Corp., Toledo, is at the apex of the holding company system. **(h)** — Landmark Subco, Inc., Wilmington, Del, is at the apex of the holding company system. **( )** — Indicates a net loss. **(N.A.)** — Not available.

Active Thrift Holding Companies

THRIFTS & MORTGAGES

The servicing portfolios of the top 300 mortgage companies grew 11.9% in the year ended June 30. There were few changes in the rankings, with GMAC Mortgage Co. remaining in the top slot. ____ 18

Theo H. Pitt Jr., chairman of the U.S. League of Savings Institutions, denies that his group lobbied for a smaller recapitalization of the FSLIC than it believed would eventually be needed. Edwin J. Gray, former Bank Board chairman, has said the group sought a small bond issue so that public money would be used when the money was depleted. ____ 18

East River Savings Bank has solved its interest-rate-sensitivity problems by balance sheet changes, says the chief financial officer of the New York thrift. ____ 19

INSIDE

Citicorp plans to be entrenched in California by 1991, with 400 to 500 savings and loan branches, so that it will not need to take advantage of the state's new law permitting out-of-state banks to buy commercial banks. __ 2

Citizens and Southern Corp., Atlanta, agreed to buy Chemical Bank's factoring division, which had revenues of $1.7 billion in 1986. ____ 2

Borrowing on the international credit markets has shifted markedly away from bond issues and toward bank syndicated loans, reports the Organization for Economic Co-operation and Development, Paris. ____ 2

Secondary market prices for Mexican bank debt retreated from their October gains, as the government said its debt-equity swap program was "under review" because of inflation. ____ 2

Credit lines: Although volatile capital markets sank some deals, Rosenkranz & Co.'s $220 million purchase of Reliance Standard Life Insurance Co. sailed through the storm, helped by the bond market rally that followed the stock crash. ____ 3

Fannie Mae announced it will begin cash purchases of adjustable-rate mortgages tied to the Federal Home Loan Bank of San Francisco's cost of funds. ____ 9

Shearson Lehman Brothers hopes to file an SEC registration statement within a month for a package of boat-loan-backed securities. ____ 26

An American Banker Special Report

Top Farm Banks Credit Success To Knowing Customers, Industry

By RICHARD RINGER

Were it not for its stellar farm loan portfolio, City National Bank of Kankakee, Ill., would be as average an agricultural bank as can be found in the nation.

Agricultural Lending

Going into this year's spring planting season, City National's $24.2 million farm loan portfolio was flawless. According to City National's federal regulatory report of condition for the first quarter, there were no bad loans. None of its farm loans was past due 90 days or more; none was on a nonaccruing basis.

City National's farm borrowers are harvesting the crops that were planted with loans received last spring. A good harvest is predicted, and Paul F. Blanke, president of City National, expects his farm-loan portfolio to remain in good shape.

Iowa Bankers' Expectations
Page 31

The financial squeeze in agriculture during most of the 1980s has made a clean farm-loan portfolio rare for a farm bank, which regulators define as a bank with at least 25% of its loans tied to agriculture. Of the top 100 agricultural banks, only five on the *American*

S&L Executives Talk Publicly Of US Bailout

In Switch, They Suggest Taxpayer Help Needed

By JIM McTAGUE
Washington Bureau

News Analysis

WASHINGTON — The thrift industry is beginning to own up publicly to what it has long been saying behind closed doors: John Q. Taxpayer may have to ride to its rescue.

Statements to this effect by officials of the U.S. League of Savings Institutions at their annual convention this week in New Orleans resulted in a spate of news stories around the country.

Theo H. Pitt Jr., the league's new chairman, said there is a limited amount of money that healthy thrifts can contribute to help the Federal Savings and Loan Insurance Corp. liquidate the 20% of the industry that is dragging everyone else down.

The industry currently is paying special assessments to fund $10.8 billion in bonds to be raised for the FSLIC over the next three years.

"We have to make it abundantly clear to Congress that a lot of our problems were not created by us and that there has to be a sharing of responsibility," Mr. Pitt was quoted as saying at a U.S. League convention press conference.

Mr. Pitt's sentiments were echoed by former league chairman Gerald Levy.

"We're going to pay our fair share but it's impossible for us to pay the whole bill," he said.

When the league was fighting a proposed $15-billion industry bailout earlier this year, it was singing a very different tune. It claimed then that Federal Home Loan Bank Board Chair-

MARTIN MAYER

Real Estate Powers for Banks

WHEN the bank lobbyists talk about the outmoded laws of the 1930s that must be removed so that our big banks can roam the earth like the giants of old, they never utter the words "deposit insurance."

But the banking legislation of the 1930s is not a Chinese menu that permits choices from column A and column B. It is a relatively unified body of law, more tightly written and more directly expressive of its intentions than most of what gets written these days.

Now, political action committees, lobbyists and other conspirators against plain speaking get their claws into legislation in the committees and then on the floor and then again when the executive branch advises the conference at the end. And, as the environmentalist Garret Hardin wrote some years ago, "You never can change just one thing."

Garn-St Germain, with its preposterous maintenance of insurance on principal *and interest*, while eliminating interest rate ceilings, can stand as the horrible example of what happens when you try to change just one thing. The costs of that provision in ultimate bailouts of the Federal Savings and Loan Insurance Corp. and, probably, the Federal Deposit Insurance Corp. will be greater than the Stealth bomber and the Trident submarine programs put together.

Put deposit insurance together with the abdication of control on the assets of depositories, and you're talking about costs to rival those of President Reagan's

Would you feel more secure with a credit card program that offers very little risk?

If you have some good reasons to have a credit card program and also some good reasons not to want the full risk of running one, talk to Franklinton Financial Services.

Franklinton offers the perfect solution, and takes on the responsibility for conducting the program from beginning to end. Or, if you have a program now and want to convert, Franklinton may be interested in purchasing your portfolio. What could be easier? You benefit, and have the advantage of security, too.

It's just another way Franklinton takes a personal interest in your needs. And another reason why Franklinton is one of America's most popular credit card processors.

Call Joette Kuharic at 614/863-8222 for more information. You'll find her very helpful.

Talk to Franklinton... America's personal favorite.

Real Estate Powers for Banks

Continued from Page 1

Strategic Defense Initiative. For sure, the country can't afford both the SDI and the repeal of the Glass-Steagall Act without at least some modification of deposit insurance.

The fact that you can't seriously consider awarding securities powers to banks without modifying deposit insurance has begun to strike home at the big banks.

Testifying before the Senate Banking Committee the other day, Roberto G. Mendoza, executive vice president of Morgan Guaranty Trust Co., suggested that if you gave the money center banks a little time they might be able to convert to private insurance.

Or perhaps there might be a compromise, with New York State writing the insurance — its banking department is gung ho these days to give banks all sorts of powers. There are a number of experienced people in Ohio and Maryland, some currently unemployed, who could help the New Yorkers set up a state insurance fund.

Two significant proposals to relax controls on bank asset powers while maintaining deposit insurance have surfaced this year. One comes from Robert Litan of the Brookings Institution. His proposal suggests an abyssal break, not just a Chinese wall, between an insured "narrow bank" that could invest in nothing but short-term Treasuries and top-rated commercial paper, and the financial services sector of what might be any holding company, which could do pretty much what it pleased with its own money and uninsured borrowings in deposit form or otherwise.

Not to put too fine a point on the matter, the FDIC's venture to legitimize direct investment in real estate by nonmember banks couldn't be more wrongheaded.

A spokesman for the Federal Reserve Bank of New York, committed to a more wide-ranging deregulation program proposed by its president, E. Gerald Corrigan, complains that nobody would wish to own Mr. Litan's narrow bank. But Mr. Corrigan's proposal, which would leave the Fed in charge, conceals the deposit insurance issue behind verbiage that assumes the regulators can handle whatever comes up.

One notes in passing that it was in a market supervised by Mr. Corrigan's bank (not then under his direction) that the Brazilians were permitted to build up $4 billion or $5 billion of nightly Fed funds purchases until it failed at the New York clearing house on Dec. 9, 1982.

"We noticed what was happening," said the man in charge a few months later, while the creditors were sorting through the rubble, "but nobody thought through what it meant."

The other interesting proposal comes from Bert Ely and George Kaufman. It suggests a very wide range of premiums that could be assessed for deposit insurance according to the risk descriptors of the portfolio.

Banks with junk bonds, loans to lesser developed countries, second mortgages, heavy exposure in swaps or foreign exchange, or long-dated securities might have to pay as much as 125 basis points a year, while banks with Mr. Litan's inventory of assets might pay only 5 basis points. These premiums would vary continuously according to information digitally transmitted to the FDIC every night.

This is of course much more serious than the FDIC's own risk-related premium proposals, which would permit a maximum additional assessment of no more than 12.5 basis points on the riskiest portfolio imaginable. These proposals would assume that existing FDIC examiners could make adequate judgments on the relative safety of every bank's loans and investments in their annual or, at best, semiannual visits.

For Mr. Ely's and Mr. Kaufman's system to work, all holdings would have to be continuously marked to market, like the portfolios of the investment banks, the margin accounts at the brokerage houses, and the positions of the hedgers and speculators on the Chicago markets.

There is a precedent for this sort of close monitoring of depositories in the office of the National Credit Union Administration, whose computer is hooked into the books of all the credit unions the operation insures. Frequency of examination by the insurer would be a function of the volatility of the portfolio.

This proposal, I think, solves the problem. Couple this sort of high-profile, properly audited risk-related deposit insurance premium with a required liquidity ratio, and I'll support the total elimination of Glass-Steagall constraints on depository institutions.

It is against the background of this proposal that one should look at the FDIC's effort to legitimize direct investment in real estate by nonmember banks. Not to put too fine a point on the matter, the FDIC's venture couldn't be more wrongheaded.

It would reduce the liquidity of the banks' portfolios, put them into situations where entire investments can easily be lost (much harder to do when you're a lender and you have the investor's cushion to protect you from bad judgment or bad luck), and make it virtually impossible for the insurance corporation to mark to market a significant portion of the holdings of insured institutions.

If adopted and carried into effect, it would add greatly to the difficulty of proceeding along what may be the only plausible path to giving banks the continued benefit of insured deposits and the new opportunities of merchant banking.

For me, the action the FDIC has announced it will take in the next few days on its real estate proposal will be a litmus test of whether the incumbent leaders of this agency wish to make a contribution to the dialogue on the reform of banking legislation or wish to use their brief authority to make an ideological statement.

In fact, of course, a vote to authorize expanded powers can be for the time being no more than such a statement, for Congress has imposed a moratorium on the actual extension of new powers. The moratorium is scheduled to expire in March, and the banking associations have declared that the defeat of any extension of the moratorium is their prime goal before Congress right now.

The question of whether the moratorium should be extended is at bottom a question of whether the regulators and their counsel will employ their considerable and growing powers of casuistry to gut the legislation they are supposed to enforce. Such actions would make it more difficult for Congress to write new legislation that serves public as distinct from industry purposes.

If the FDIC votes to give insured state-chartered nonmember banks power to make direct investments in real estate, I think it quite clear that Congress has no choice but to extend the moratorium until a new President and Congress can take up these matters. ■

ACCOUNTING RULES: Financial Accounting Standards Board rules on accounting for nonrefundable fees and costs of originating loans go into effect today. The changes include expanding the types of costs that are eligible for capitalization, taking prepayment estimates into account in determining the life of the loan, and allowing some refinanced loans to be treated as new loans. Lenders have the option of applying the new accounting procedures prospectively — from the time the changes take effect — or restating the earnings of prior years to reflect the changes.

LETTER TO THE EDITOR

Many Support Tax-Exempt Status for Credit Unions

To the Editor:

In essence, your Nov. 2 article titled "Taxation Inevitable for Credit Unions, Experts Say" [page 9] is misleading. Not to detract from the professional reputations of the two individuals quoted in support of your conclusion (who are no doubt very knowledgeable in their own fields), it is worth noting that Sen. Jake Garn, R-Utah, the only expert cited on the views of Congress, asserted his belief that the nation's credit unions "will always be able to maintain" their tax-exempt status.

Sen. Garn's views are not insignificant in this matter, since Congress alone can legislate changes affecting the credit union exemption. He is not alone in this belief, either. The chairmen and ranking minority members of both the House and Senate banking committees as well as a considerable portion of the members of these committees stand firm in their support for maintaining the tax-exempt status of credit unions as member-owned, nonprofit organizations.

Moreover, proposals to alter this status have been considered a number of times by both the House Ways and Means and Senate Finance committees and have been, in each instance, summarily rejected.

For these reasons, the National Association of Federal Credit Unions believes that its efforts in the future will challenge the accuracy of your publication's headline, as the "inevitability" of credit union taxation is nowhere near as apparent to those in the know.

Robert A. Hess
Chairman
National Association of
Federal Credit Unions
Washington

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reasons of space and clarity.

Remember, we need your views to be a true community newspaper.

Listing of the top 25 firms in the mortgage industry based on the dollar volume of mortgages serviced for others. The listing includes mortgage companies, commercial banks, and thrifts. For firms with more than one subsidiary engaged in mortgage servicing, a **combined** servicing figure is used for all of these subsidiaries and the name of the parent company is shown in bold type. All data— except data for thrifts— are from American Banker questionnaires sent directly to the mortgage firms. Thrift data are from the report of condition submitted by FSLIC-insured institutions to the Federal Home Loan Bank Board. Source of these data is **ADP Data Services Division, New York.** **(a)**— The five mortgage servicing subsidiaries are: Citicorp Howeowners Services, Inc., St. Louis; Citicorp Savings of Illinois, FS&LA, Chicago; Citicorp Savings, FS&LA, San Francisco; Citicorp Savings of Florida, FS&LA, Miami; and Citibank NA, New York. **(†)**— Includes mortgages owned by Citicorp, **and therefore substantially overstates the servicing (for others) volume**. Citicorp would not provide data on mortgages serviced for others only. Also, Citicorp would not provide data for Citicorp Howeowners Services, Inc., and Citicorp Real Estate, Inc., New York. Citicorp Homeowners ranked 3rd among the top 100 mortgage companies on 12/31/86 with $19.8 billion in servicing for investors, and Citicorp Real Estate ranked 85th with $2.1 billion. **(b)**— The three mortgage servicing subsidiaries are: Fleet Real Estate Funding Corp., Florence, S.C.; Fleet Mortgage Corp., Milwaukee, Wis.; and Union Bank & Trust Co., Hartford, Conn. **(c)**— The two mortgage company subsidiaries are: Metmor Financial Inc., Los Angeles, and MetFirst Financial Co., Overland Park, Kansas. **(d)**— The two mortgage servicing subsidiaries are: Kissell Co., Springfield, Mo., and City Federal Savings Bank, Elizabeth, N.J. The latter does its servicing business through a division of the bank called CityFed Mortgage Co. **(e)**— The two mortgage company subsidiaries are: Sears Mortgage Corp., Lincolnshire, Ill., and Coldwell Banker Real Estate Financial Services, El Segundo, Calif. **(f)**— In the latter half of 1986, three Bank of Boston Corp. mortgage company subsidiaries— Mortgage Corporation of the South, Birmingham, Ala.; Stockton, Whatley, Davin & Co., Jacksonville, Fla.; and BancBoston Mortgage Corp., Wellesley Hills, Mass.— merged into one entity called BancBoston Mortgage Companies, Inc. Since yearend 1986, the firm changed title and merged RIHT Mortgage Corp., Charlotte, N.C., another Bank of Boston subsidiary. **(g)**— The eight mortgage servicing subsidiaries are: First Interstate Mortgage Co., Pasadena, Calif.; First Interstate Bank of Oregon NA, Portland; First Interstate Bank of Washington NA, Seattle; First Interstate Bank of Casper NA, Wyoming; First Interstate Bank of Alaska, Anchorage; First Interstate Bank of Arizona NA, Phoenix; First Interstate Bank of Nevada NA, Reno; and First Interstate Bank of Englewood NA, Colo.. **(h)**— The three mortgage company subsidiaries are: Mellon Financial Services Corp. #8, Cleveland; Mortgage & Trust, Inc., Houston; and Mellon Financial Services Corp. #7, New Orleans. **(i)**— Formerly known as Cameron-Brown Co. **(j)**— The three mortgage servicing subsidiaries are: Bank of America NT&SA, San Francisco; Seafirst Mortgage Corp., Seattle; and BA Mortgage & International Realty Corp., San Francisco. **(k)**— The three mortgage company subsidiaries together are called "Meritor Mortgage Group" and consist of: Meritor Mortgage Corp- West, Orange, Calif.; Meritor Mortgage Corp- East, Philadelphia; and Meritor Mortgage Corp- Central, St. Paul, Minn. **(r)**— The 12/31/86 rank and servicing volume were revised to include MetFirst Financial Co. **(R)**— Revised. **(‡)**— Non-comparable data, no percentage change calculated.

10 Largest Gainers in Servicing Among Top 300 Mortgage Companies

	(Dollar Amounts in Millions)	Servicing 6/30/87	Servicing 6/30/86	Percent Increase	Serv. Rank

Volume of Mortgages Serviced— the dollar volume of permanent mortgages serviced for investors. Mortgages owned by an institution, as well as foward commitments, home improvement loans, and all temporary financing such as construction loans and development loans are excluded. (a)— Sold its servicing portfolio to 36th-ranked Chase Home Mortgage Corp., Montvale, N.J., 11/2/87. (b)— Acquired 219th-ranked Valley Mortgage Corp., Salt Lake City, Utah, 7/87. (c)— Formerly known as IntraWest Mortgage Co. (d)— On 10/6/87, Cobb Partners, Inc., Miami— a company formed by 13 former Arvida executives— acquired Arvida from The Walt Disney Company and changed its name to Cobb Partners Fiancial, Inc. (e)— Formerly known as Pine State Securities Corp. (f)— Changed title from United Bankers Mortgage Corp. when Dixie S& L Assn., New Orleans acquired the company from United Oklahoma Bank. N.A.— Not available.

Top 300 Mortgage Companies

Based on Volume of Permanent Mortgages Serviced on June 30, 1987

All data are from the Quarterly Financial Report to the Federal Home Loan Bank Board for FSLIC-insured institutions and were provided by **ADP Data Services Division, New York**, from their data base of FHLBB data. **Mortgage Loans Serviced for Others** are the total of all unpaid principal balances of all whole loans and participating interests in loans serviced by an institution but owned by others at the close of the period, whether or not originated by the institution. **Loan Servicing Fees** are the fees earned— as a result of the servicing for others of loans or participations therein— **during the 12-month periods ending on June 30, 1987, and June 30, 1986, respectively**. The 12-month servicing fees are calculated by summing the fees earned in each of the four quarters of the period. **N.A.**— Not available.

THRIFTS & MORTGAGES

AN AMERICAN BANKER WEEKLY FEATURE

Five of the top 25 companies will not be in existence as presently constituted 18 months from now.

— Lawrence J. Trautman, director of mortgage services, Donaldson, Lufkin & Jenrette Securities Corp.

Newswatch

Thrift Groups Link

The Foundation for Savings Institutions will become an affiliate of the U.S. League of Savings Institutions.

The foundation — a trade organization of 900 savings institutions — was formed 35 years ago to promote home ownership and the thrift business.

At its annual convention this week in New Orleans, outgoing league chairman Joe C. Morris announced a $6 million promotional campaign concerning the affiliation.

The program will be financed with $3.5 million from the foundation, $1 million from the U.S. League's reserves, and $1.5 million raised by a one-year, 10% surcharge on league members.

Asset Growth Declines

Assets of federally insured thrift institutions grew at a 3.6% annual rate in September, down sharply from the 9.3% rate in August, the Federal Home Loan Bank Board reported.

Net acquisitions of mortgage-backed securities increased to $6.4 billion in September from $4 billion in August, while the $20 billion of mortgage loans closed by thrifts in September was about the same as in August.

The slower asset growth reflected a record $6.6 billion reduction in cash and investment security holdings during the month — compared with a $600 million decline in the previous month — and a decline in net non-mortgage loan acquisitions from $1 billion to virtually zero, the Bank Board said.

Florida Thrift In FSLIC Pact

Financial Security Savings and Loan Association, Delray Beach, Fla., has entered into a consent agreement with the Federal Savings and Loan Insurance Corp. and the State of Florida.

Certain business decisions must be approved by the FSLIC, and the agency may find a merger partner for the thrift. The agreement authorizes the FSLIC to negotiate a merger, consolidation, asset-liability transfer, or management services agreement.

Financial Security also is restricted from certain business activities without prior approval of its supervisory agent, according to filings at the FSLIC.

Imperial Bank Eyes Thrift

Imperial Bank, Los Angeles, with $1.5 billion in assets, plans to become the majority owner of a $22 million-asset thrift in Sacramento, Calif.

Under terms of the agreement, Imperial will acquire a controlling interest in Countryside Thrift and Loan, a unit of Countryside Bancshares, in exchange for Imperial's $4.9 million-asset Southern Pacific Thrift and Loan, Beverly Hills, Calif. In addition, Imperial will inject $5 million in capital into Countryside.

Boston Bancorp Plans Buyback

Boston Bancorp, the holding company for South Boston Savings Bank, said it plans to repurchase up to 4.9% of its outstanding stock, or 400,000 shares, over the next six months.

A company official said the stock was "an attractive investment at this time," adding the move is designed to increase earnings per share for outstanding stock.

Carteret Sets Home Vote.

Carteret Bancorp., parent of Morristown, N.J.-based Carteret Savings Bank, said its shareholders will meet Jan. 20 to vote on the proposed acquisition of Carteret by Home Group Inc., New York. Carteret said last month that Home Group had requested a mutual termination or postponement of the deal, but Carteret is seeking to enforce the agreement.

Mortgage Servicing Volume Up

GMAC Remains Leader Among Mortgage Firms With $23.9 Billion Total

By PHIL ROOSEVELT

NEW YORK

THE SERVICING portfolios of the top 300 mortgage companies grew 11.9% in the year that ended June 30, but there was little change in the rankings of leading companies, according to a survey by the *American Banker.*

GMAC Mortgage Co., the Elkins Park, Pa.-based unit of General Motors Acceptance Corp., retained the top spot, servicing $23.9 billion of mortgages at midyear, the survey shows.

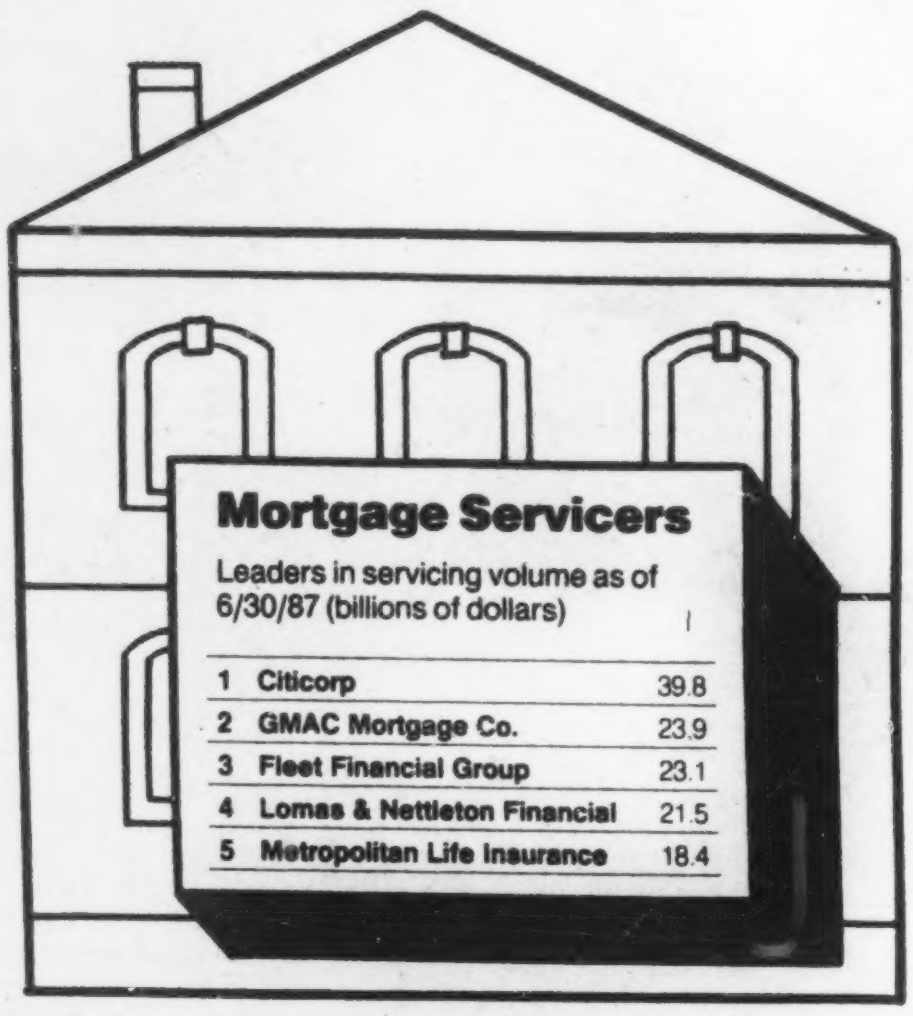
Counting banks and thrifts, as well as mortgage companies, New York-based Citicorp — which overtook GMAC as the leader at yearend 1986 — maintained its top ranking. GMAC remained in second place, but Fleet Financial Group, Providence, R.I., grabbed the No. 3 spot from Lomas & Nettleton Financial Corp., Dallas.

Despite the lack of dramatic shifts, the rankings "may change profoundly over the next 18 months, more so than at any other time in history," said Lawrence J. Trautman, director of mortgage services at Donaldson, Lufkin & Jenrette Securities Corp., New York.

Top Mortgage Companies
Tables Begin on Page 6

He predicted a spate of sales of servicing and whole companies as a result of the "treacherous" interest rate environment of the past six months. "Five of the top 25 companies will not be in existence as presently constituted 18 months from now," Mr. Trautman asserted.

Mortgage servicing, long the most profitable part of mortgage banking, includes the collection of payments, bookkeeping, insurance, loan analysis, and pursuit of delinquent loans. For performing these functions, the servicer of a mortgage typically receives an annual fee of about 0.50% of the outstanding balance.



Mortgage Servicers

Leaders in servicing volume as of 6/30/87 (billions of dollars)

1	Citicorp	39.8
2	GMAC Mortgage Co.	23.9
3	Fleet Financial Group	23.1
4	Lomas & Nettleton Financial	21.5
5	Metropolitan Life Insurance	18.4

In the survey, the 300 largest mortgage companies had a combined servicing portfolio of $615.5 billion on June 30, up from $549.8 billion reported by the top 300 a year earlier.

That gain might seem small compared with the spectacular growth in mortgage originations during the same period. According to SMR Research, Budd Lake, N.J., total originations of residential mortgages shot up 61% in the 12 months ended this June, to $515.7 billion.

Analysts point out, however, that many of the originations were refinancings, which produce no net gain in total servicing.

Mortgage companies that managed to post big gains often did so through affiliations with other companies.

Irvine, Calif.-based GlenFed Mortgage Corp., for example, saw its servicing portfolio grow by a whop-

Savings League's Pitt Denies Group Lobbied To Maximize Public Funds for FSLIC Bailout

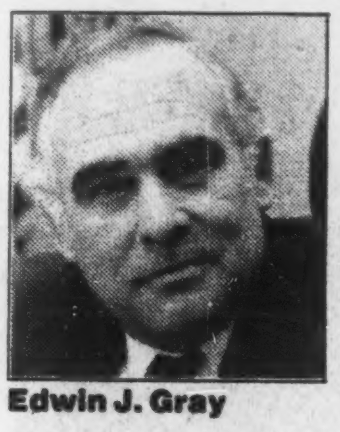
By LINDA ELLIS

NEW ORLEANS

DID the U.S. League of Savings Institutions deliberately lobby Congress for less money than eventually would be needed to bail out the Federal Savings and Loan Insurance Corp.?

Yes, said Edwin J. Gray, former chairman of the Federal Home Loan Bank Board in Dallas during an interview with *The Dallas Morning News.*

Absolutely not, countered Theo H. Pitt Jr., the new chairman of the U.S. League, at its convention here this week.



Edwin J. Gray

Mr. Gray said the thrift industry's largest trade group sought a small recapitalization bond issue because when the funds run out, more public money will be used.

"While it is true that this industry, the healthy part of the industry, will not be brought to its knees by the 20% of the thrift industry that is sick," Mr. Pitt said, "that statement by the former chairman is not true."

The league lobbied strenuously last summer for a $5 billion limit on the industry-funded FSLIC bailout. Congress voted a $10.8 billion bond issue. Many industry analysts and spokesmen say that will not be enough.

Several observers attending the league's convention, including Gerald Levy, a former chairman of the group, said the thrift industry might need an infusion of taxpayers' money.

Mr. Pitt acknowledged that possibility. He said there is a limit to the amount of money healthy thrifts should be required to contribute to sick thrifts.

"It must be made clear that a lot of the problems were not created by us as an industry. The problems were not of our doing, and the solution to the problems should be shared," he said.

Theo H. Pitt Jr.

"No one is able to determine what the needs are at this point, and until we know the magnitude of the problem, it is not appropriate to say that other funds, public funds, will not be necessary."

The U.S. League is starting studies of the deposit insurance system and developing strategies for the thrift business. A task force will seek ways to insulate the deposit insurance agencies from "excessive and irresponsible" risk-taking, Mr. Pitt said.

"Clearly, we have a more volatile economy in many respects since deregulation," Mr. Pitt told the group's delegates. "There are great risks and unpredictable factors that can trigger wild fluctuations. Our business is adapting to these conditions, and it has become more apparent that the deposit insurance agencies must adapt too."

A task force on the industry's future will examine the role of new technologies in the marketplace, he said.

"It will look at alternative lending and investment

East River Finds Beauty in Liquidity

By LINDA ELLIS

NEW ORLEANS

THE CHIEF FINANCIAL officer of the East River Savings Bank, New Rochelle, N.Y., stands happily accused of being insensitive. East River, a privately held, $2.6 billion-asset thrift, has solved its interest rate sensitivity problems by balance sheet changes, said Nelson L. Stephenson.

"We disposed of $500 million of long-term, fixed-rate assets, and raised $350 million of low-cost funds in the capital markets," Mr. Stephenson said at the convention of the U.S. League of Savings Institutions. "We did that with securities appropriate for our asset-liability posture."

Nelson Stephenson

Sounds easy, right? But it didn't happen overnight, according to Mr. Stephenson.

He said that East River increased production of floating-rate real estate loans and put additional liquid investments on the books.

East River's gap position — the relative pricing maturity dates of assets and liabilities — was just below 15% last September. Two years ago, it had been more than 70%.

"After all our restructuring activity, our balance sheet is split one-third in a commercial real estate portfolio, roughly one-third in a liquid investment portfolio, and one-third in a residential loan portfolio," Mr. Stephenson said. "About 80% of our funding is deposit related, and about 20% is from the capital markets."

Mr. Stephenson said East River's current investment program is based on risk-weighted return. "What that means," he said, "is that we are looking at the risks and asking if the return is acceptable. We ask if, on a worst-case basis, it's no worse than a relatively liquid, low-yield alternative investment. That helps with the decision on structure.

"A key phrase for us is volume and values. We try to make sure our decision-makers understand that you never confuse the two. The objective is to make money, not volume, and that's a tough concept for people who have been in a business that was volume driven with guaranteed spreads," he said.

The East River executive sees a problem for many savings institutions, because deregulation has permanently changed the business. East River's response, he said, is a diversification strategy that creates revenue without totally relying on spread banking.

"Commercial real estate financing and something we call real estate merchant banking give us the ability to participate in transactions on an equity basis."

For years, he said, thrifts and banks profited from lucrative interest rate spreads. Loans were illiquid, there were few alternative sources of capital for real estate investors, and banks were able to price loans at rates higher than their market value.

"Now, borrowers are more sophisticated, capital markets make money available, and spreads are under competitive attack. As an example, Japanese banks have a materially lower cost of funds than their American counterparts. It's not uncommon for Japanese banks to borrow routinely at levels less than Libor [London interbank offered rate], and a result of that is a competitive cost advantage in the lending marketplace," he explained.

The basic cost structure in the banking industry, he noted, is expanding. It is harder and harder to keep the personnel necessary to participate in an increasingly competitive environment. The convergence of declining spreads and increasing costs means banks are under pressure to redefine themselves and their profit centers.

East River, he said, looks to be profitable not necessarily from the use of capital, but from the use of expertise to create new instruments.

He predicts that more savings institutions will remove themselves from the portfolio lending process and turn to being servicers and originators.

Portfolio diversification should be encouraged, Mr. Stephenson said, but the institution needs to recognize the credit risk that stems from diversity.

"Through buying an asset-backed security that has collateral or credit enhancements, though, you can partially reduce credit exposure," he said. "Such enhancements also mean that a portfolio manager who isn't a seasoned commercial lender won't be exposing an institution to the same type of credit risk incurred before with direct whole loan originations."

Mr. Stephenson said East River uses options in managing the balance sheet.

"As an example, when a lender originates a real estate loan, the loan conveys the right to prepay, damaging the ability to manage that financial asset. The borrower has a no-cost option to prepay that mortgage without penalty. As an alternative, to give the lender the option, the lender may require a yield maintenance provision in the mortgage," he said.

"What that means is, if the borrower prepays, he must give the lender the present value difference between rates available at prepayment and the rate on the mortgage to compensate the lender for the loss of what was originally priced as a long-term fixed-rate loan. That's one example of one option," Mr. Stephenson said. ■

Mortgage Firms' Servicing Portfolios Up 11.9%

➸ Continued from Page 18

ping 452% from last year, chiefly the result of acquiring Merrill Lynch Mortgage Corp., Stamford, Conn., which ranked 44th in servicing last year, with $3.18 billion on June 30, 1986.

Seven other mortgage companies in the top 300 in June 1986 were acquired. After Merrill, the largest was Security Pacific Mortgage Corp., Denver, which was 57th in servicing last year with $2.48 billion. It was acquired by Fleet Real Estate Funding Corp., Columbia, S.C.

Some 28 mortgage companies, far more than usual, refused to respond to the *American Banker* survey. Among those that declined were St. Louis-based Citicorp Homeowners Services Inc., which ranked No. 3 a year earlier, and Citicorp Real Estate Inc., which was No. 64 a year earlier.

The two companies said their parent, Citicorp, would not allow them to participate. Citicorp, which last month consolidated some of its mortgage operations, only furnished the total servicing volume of all subsidiaries, including the servicing of mortgages owned by Citicorp.

Many others choosing not to participate gave no reason, prompting one industry observer to quip, "It's funny how people get quiet when business turns down."

Other survey highlights:

- Great Western Bank FSB, Beverly Hills, Calif., and Knutson Mortgage Corp., Bloomington, Minn., moved into the top 25 servicers among banks, thrifts, and mortgage companies. Anchor Mortgage Services Inc., Wayne, N.J., and Alliance Mortgage Co., Jacksonville, Fla., dropped out.
- Among thrifts servicing mortgages for investors, City Federal Savings Bank, Bedminster, N.J., led the pack, followed by Home Savings of America, Los Angeles, and American Savings & Loan Association, Stockton, Calif.
- Among banks, excluding their mortgage subsidiaries, Marine Midland Bank, Buffalo, rocketed from No. 13 to No. 3. Bank of America, San Francisco, retained the No. 1 spot and Security Pacific National Bank, Los Angeles, remained No. 2. ■

Pitt Denies Group Sought to Maximize Public Funds

➸ Continued from Page 18

powers in the event that the mortgage market becomes so crowded that it is impossible to maintain appropriate profit margins," Mr. Pitt said. "And it will look at incentives that might be devised to maintain appropriate margins even in the face of growing competition in the mortgage market."

Savers are becoming increasingly sophisticated about new investment opportunities, said the savings league chairman, and thrifts can seize the opportunity to expand their deposit bases.

"An especially troubling factor facing us in the immediate future is the threat of a new rise in interest rates if the administration and Congress fail to put together an adequate program to reduce the federal deficit," Mr. Pitt said. "We understand how harmful these deficits are and how vulnerable they make us and the nation to another round of interest rate extremes." ■

6-Month Treasury Bills	6.24%
1-Year Treasury Bills	6.87%
3-Year Treasury Notes	7.96%
5-Year Treasury Notes	8.32%

Average rates for the week ended Nov. 6 compiled by the Federal Reserve Board.

McNichol to Chair PMI Mortgage

NEW YORK — J. Allan McNichol has been named chairman and chief executive officer of PMI Mortgage Insurance, one of the nation's largest private mortgage insurers.

Mr. McNichol, president of the San Francisco-based concern since 1984, succeeds C. Earl Corkett, who resigned to pursue other interests, a PMI spokeswoman said.

In an interview, Mr. McNichol said one of his priorities is to expand a program of offering discounts on premiums to lenders with records of making good loans.

The program, begun early this year, is patterned after good driving discounts typical in auto insurance and has yet to be imitated by other mortgage insurers, he said. Most insurers' premiums are based more strictly on the type of mortgage and the size of the loan relative to the home's value.

Mr. McNichol, 56, has spent 28 years working within PMI's parent, Allstate Insurance Co. He was executive vice president of Allstate Life Insurance Co. and vice president of marketing for all affiliates.

Succeeding him as PMI president is W. Randolph Leathers, executive vice president of field operations since 1984. ■

Fed Gives Nod to Fleet Merger

PROVIDENCE, R.I. — The Federal Reserve Board has approved the merger between Fleet Financial Group and Norstar Bancorp, Albany, N.Y.

The merger, expected to be completed in early January, still awaits other regulatory approvals, although difficulties are not expected. Fleet Financial, a diversified financial services firm based here, has more than 475 offices in 38 states and three foreign locations. ■

The top 100 banks listed in order of domestic agricultural loans outstanding on 3/31/87. The banks were drawn from the universe of all insured commercial banks in the U.S. **Data Source:** The federal regulatory report of condition for all insured commercial banks. These data were provided to American Banker by **ADP's Data Services Division, New York.** Please note that 1986 data are restated for mergers occurring in 1987. **Total Agricultural Loans** are the sum of loans secured by farmland plus loans to finance agricultural production and other loans to farmers. (Schedule RC-C, Column B—Domestic Offices, items 1.b. and 3, respectively. **Loans secured by farmland** include loans secured by farmland and improvements thereon, as evidenced by mortgages or other liens. **Loans to finance agricultural production and other loans to farmers** are loans for the purpose of financing agricultural production. Included are both secured (by other than real estate) and unsecured loans made to farm and ranch owners and operators (including tenants) or to nonfarmers. **Total Loans** are total loans and leases net of unearned income that are booked in a bank's domestic offices only. (Schedule RC-C, item 12, Column B). **Bad farm loans** are domestic farm loans to finance agricultural production that are past due 90 days or more and still accruing plus nonaccruing loans. (Schedule RC-N, item 2, Columns B and C). **Total bad loans** are loans made to domestic customers that are past due 90 days or more and still accruing plus nonaccruing loans. (Schedule N, item 7, Columns B and C) minus (Schedule N, items 1b, 3b, and 6b, Columns B and C). **Bad Farm Loan Ratio** is calculated by dividing bad farm loans by total (domestic) bad loans, expressed as a percent. **N.A.**— Not available.

Top 100 Banks in Agricultural Loans

Income from Farm Loans, Total Interest Income, Chargeoffs on Farm Loans, and Chargeoffs on All Loans First Quarter of 1987, Compared with First Quarter of 1986 (Thousands of Dollars)

The top 100 banks in domestic agricultural loans outstanding on 3/31/87, listed in order of agricultural loans outstanding on 3/31/87. (See page xx.) **Data Source:** The federal regulatory report of income from **ADP's Data Services Division, New York.** Please note that 1986 data are restated for mergers occurring in 1987. **Interest income from farm loans** is gross interest and fee income on loans to finance agricultural production, booked in domestic offices. Data are for the first quarter of 1987 and 1986, respectively, and are from Schedule RI-Report of Income, item 1.a.(1):(c). **Total interest income** is total gross interest income for the bank from all of its operations both domestic and foreign. It is taken from Schedule RI, item 1.g. **Charge-offs on Farm Loans** are net charge-offs (charge-offs minus recoveries) on loans to finance agricultural production. These data are for the first quarter of 1987 and 1986, respectively, and are from Schedule RI-B, item 3. **Charge-offs on all loans** are net charge-offs (charge-offs minus recoveries) on all loans both domestic and foreign. These data are for the first quarter of 1987 and 1986, respectively, and are from Schedule RI-B, item 9. **N.A.**— Not available.

Top 100 Agricultural Banks

Based on Domestic Agricultural Loans Outstanding March 31, 1987, Compared with March 31, 1986
For Banks with 25% or More of Loans in Agriculture (Thousands of Dollars)

Compiled by American Banker Copyright 1987

Agricultural banks are banks with 25% or more of their loans in agricultural lending. **Data Source:** All data were taken from the federal regulatory report of condition for all insured commercial banks from **ADP's Data Services Division, New York.** Please note that 1986 data are restated for mergers occurring in 1967. **Total Agricultural Loans** are domestically-booked: (1) loans secured by farmland plus (2) loans to finance agricultural production and other loans to farmers. (Schedule RC-C, Column B—Domestic Offices, items 1.b. and 3, respectively.) **Farm Loans as a % of Total Loans** is the ratio of total agricultural loans to total domestic loans, expressed as a percentage. **Bad farm loans** are domestic farm loans to finance agricultural production that are past due 90 days or more and still accruing plus non-accruing loans. (Schedule RC-N, item 2, Columns B and C). **Bad Farm Loans as a % of Equity** is the ratio of bad farm loans to total equity capital (Schedule RC-Balance Sheet item 28), expressed as a percentage. **N.A.**— Not available.

An American Banker Special Report

Five Farm Banks that Stayed in Clover

Leading Agricultural Lenders Say They Know Their Customers and the Industry

➛ Continued from Page 1

Banker listing published today had no bad farm loans at the end of the first quarter of 1987.

Those institutions, in addition to City National, are three Texas banks — Sulphur Springs State Bank, Sulphur Springs; Citizens State Bank, Dalhart; and First State Bank, Uvalde — and Stockgrowers State Bank, Ashland, Kan. (Tables on farm lending begin on page 20.)

The five banks share some traits that their executives say contribute to a healthy farm-loan portfolio: a lengthy history of agricultural lending; lending to a specialized segment of the industry; a board of directors that includes farmers or individuals who work in the industry; board review of loan decisions; and a personal knowledge of each customer that enables the bank to assess a borrower's "character."

Character is an intangible quality, but it is no less important a consideration in a loan review than a borrower's cash flow and balance sheet. "It takes all kinds of information to make a good credit decision," said Bill Williams, executive vice president at Sulphur Springs State Bank.

Most of City National's farm lending goes to finance production, the planting of another year's crop. It is among the riskier types of farm lending because a variety of noncredit factors, notably the weather, can turn what was thought to be a good loan into a bad loan. That is one of the reasons why assessing the character of a borrower is important, the bankers said.

Mr. Blanke and his bank have managed to overcome the risks, he said, because of "our level of expertise, our time in the business, and the quality of our customers."

Top Farm Lenders
Page 20

Kankakee, which is about 100 miles south of Chicago, is in a grain belt that stretches through the Midwest. City National has been making farm loans there since it was founded in 1890. The bank's farm loans at the end of March had increased almost $3 million from the same time last year, accounting for 25.58% of all loans.

By the end of the first quarter, most farmers typically have arranged loan commitments for another year of planting. Many analysts say City National's increase in lending indicates mounting confidence among farm banks in a borrower's ability to repay.

There is a concensus among farmers, lenders, and analysts that the farm economy is on a rebound from the previous six years, when many farmers and their lenders were forced out of business.

City National also shows that farm banks are attractive acquisition candidates. The $170 million-asset bank, which forecasts earnings of at least $2.2 million next year, was acquired in June by First of America Bank Corp., Kalamazoo, Mich. (Earnings for this year will be distorted because of the merger.)

Small Size an Advantage

Clark County, located in south central Kansas, is the fourth-least-populated county in the state. That plays to the advantage of Stockgrowers State Bank in Ashland, the county seat.

"We enjoy a luxury that most city bankers don't have," said John T. Fellers, the bank's president. "We know all of our customers.

"We know where they live. Our customers don't get lost in the crowds and in the numbers."

This affinity with borrowers, Mr. Fetters said, is one reason Stockgrowers managed to have no bad loans in its farm portfolio at the end of the first quarter.

The quality of Stockgrowers' farm-loan portfolio is evident even though the bank had the highest percentage of farm loans to total loans of the top 100 agricultural banks. At the end of the first quarter, 85.35% of the bank's loans were agricultural. The bank's farm loans of $18.6 million, ranked 72d in total farm loans.

Stockgrowers specializes in livestock loans, mainly cattle. It is one of the safer kinds of agricultural lending, Mr. Fellers said, because the collateral — livestock — can be counted. Livestock farming is also less capital-intensive than planting crops.

The farm financial crisis, though, has forced banks — including the 102-year-old Stockgrowers — to take new approaches to helping their borrowers and limiting losses.

Among the changes at Stockgrowers: obtaining tax returns of borrowers to get a measure of income; obtaining cash flow analyses of borrowers; biannual inspections of collateral; and working with borrowers to avoid lengthy and costly bankruptcy proceedings.

In Dalhart, Tex., farm loan officers at the $62 million-asset Citizens State Bank use computers to help construct cash flow statements for farm borrowers. The computers allow officers to "play 'what if?' with the farmers to determine the best business plan," Mr. Hambury said.

A solid business plan is essential in Dalhart. The town is located in the Texas Panhandle, where annual rainfall is about 17 inches. Crops must be irrigated from well water 300 feet to 500 feet underground. When the cost of irrigation is added to other expenses — buying seed, plowing and fertilizing the soil — farming can be considerably more expensive than in other parts of the country.

Mr. Hambury admits the bank is a conservative lender, but says the posture pays off handsomely. With its clean loan portfolio, the bank is not only profitable, but also one that regulators are looking to as a merger partner for a problem bank in the state, Mr. Hambury said. ■

S&L Industry Now Talking of a Taxpayer Bailout

➛ Continued from Page 1

man Edwin Gray was exaggerating the woes of the industry to stampede Congress into enacting a bill, and that $5 billion would be sufficient to address the problems in the short run.

The League's tone changed at its New Orleans annual meeting this week. "Industry Balking on S&L Bailout," said a front-page headline Thursday in the *Dallas Morning News.* "Top thrift officials said they've done enough," the story stated.

The Washington Post ran with a smaller story on the same matter on Thursday, but placed it prominently in the Roundup column on the cover page of its business section.

On Capitol Hill, the reaction to Mr. Pitt and Mr. Levy was subdued. Staffers said Congress has known all along that the League wants "a handout" from the Treasury.

The Federal Home Loan Bank Board has the authority to borrow $4 billion from the Treasury.

A Treasury spokesman said his agency has always resisted the idea of any taxpayer bailout for the thrift industry.

"It was my recollection that the League wanted an even smaller recapitalization than the $10.8 billion voted by Congress," said a House Banking Committee staffer. "Their sentiment all along was that the taxpayers would eventually have to bail out the industry, so why should they pay more?"

"It's impolitic for them to say they need a bailout now, even if they do," said a staffer on the Senate Banking Committee.

He said he doubted, however, that many members of Congress would be focusing on the issue now, especially in light of the fact that the $10.8 billion had not been raised and spent.

"We're trying to get the members to focus on Glass-Steagall," he said, referring to the 1933 law that separates commercial and investment banking. "The FSLIC fund would be merged with the Federal Deposit Insurance Corp. fund before there was a taxpayer bailout anyway," he said.

Congressman Gerald D. Kleczka, D-Wis., already is working on legislation aimed at merging the two funds. So far he has garnered little support for the proposal, which is also unpopular among the commercial banking community and resisted by federal regulators. The congressman works on because he feels the merger is inevitable, said his spokesman, Brian Doherty.

> 'We have to make it abundantly clear to Congress that a lot of our problems were not created by us and that there has to be a sharing of responsibility.'
>
> — *Theo H. Pitt Jr.*
> *Chairman*
> *U.S. League*

Mr. Doherty said that Mr. Kleczka is laying the groundwork for the merger now "so there won't be a shotgun wedding at the last minute."

Under the legislation, the Federal Home Loan Bank Board first would be merged with the FDIC. Next, the FSLIC fund would be merged with the FDIC fund. And finally, there would be a reconciliation of the two agencies' regulations, he said.

M. Danny Wall, the Bank Board's current chairman, repeated last week what he and the League have agreed on all along: $10.8 billion is about all the money his agency can spend effectively during the next three years.

Mr. Pitt, who is also president of Pioneer Savings Bank, Rocky Mount, N.C., said Thursday that no one knows how big a problem will face the industry when the funds are exhausted.

If it is large enough, the healthy part of the industry would reach a point where it would be unable to contribute any more money to FSLIC, he said.

Mr. Pitt said that a League task force headed by Mr. Levy is attempting to estimate the industry's breaking point and that the study would continue for several months.

"The best minds in the country will be helping us," he said. ■

Fresno Bancorp Plans Common Stock Offering

WASHINGTON — Fresno Bancorp, Fresno, Calif., will sell up to 1.2 million common shares in an initial public offering worth as much as $6.9 million, according to a filing with the Securities and Exchange Commission.

The bank holding company will sell the shares through Sutro & Co. at $4.75 to $5.75 a share.

Fresno Bancorp said it will use the proceeds from the offering for general corporate purposes.

The company, which operates the Bank of Fresno, has $176.98 million in assets and $163.2 million in deposits. It had $4.8 million in interest income at the end of fiscal 1987 on Sept. 30. ■

Bank Groups in Crucial States To Renew Push on Insurance

By PHILIP T. SUDO

NEW YORK — If at first — make that second — you don't succeed . . .

"You just keep plugging away and keep coming at it," said Philip S. Corwin, senior federal legislative counsel for the American Bankers Association. "Sometimes you're going to win."

And so it is with dogged determination that banking groups in several key states say they will redouble their efforts for insurance powers in the coming legislative session. After years of getting nowhere, the state associations in New York, California, Illinois, Pennsylvania, and Florida have once again put underwriting and selling insurance at the top of their legislative agendas.

The focus has shifted to the states because on the federal level, the fight is dead — for now. The Treasury Department recently indicated it was abandoning five years of trying to get banks into insurance and real estate in order to concentrate on securities powers.

"We're basically in a defensive mode for this Congress," Mr. Corwin said.

On the state level, though, bankers may have reason to hope. Oregon

THIRD ANNUAL CASH MANAGEMENT SURVEY

Top Concern: Profitability of Services

By YVETTE D. KANTROW

Last of Three Parts

Profitability once again is the most important issue facing bankers who sell cash management services, according to an *American Banker* survey.

As in previous surveys, profitability was ranked by most respondents ahead of such other concerns as payment-system risk and electronic data interchange.

Some bankers expressed particularly strong opinions on this topic.

"Bank profitability — not product development — derived from the sale and delivery of cash management services, will continue to be the most important issue," wrote one northeastern banker.

"The vast majority of service providers — banks — are still fairly timid about charging fairly for what they do," he said. This will be the case until

Citibank to Cut 1,000 Positions In NY Branches

1988 Restructuring Plan Will Not Close Offices

By JED HOROWITZ

NEW YORK — Citibank will eliminate about 1,000 jobs from its New York City branch system, about 10% of the bank's retail work force in the region, as part of a reorganization to be phased in by the end of 1988.

The cuts are a by-product of a plan to revise a 10-year-old branch system put in place by Citicorp chairman John S. Reed when he headed Citibank's retail sector. But unlike several major New York banks that recently announced retail staff reductions, Citicorp will not close any of its 253 Citibank branches in New York, said Susan Weeks, a bank spokeswoman.

Analysts applauded the Citicorp move while marveling at the numbers.

"It's sort of mind-blowing that they can take 1,000 jobs out of pure overhead just in the New York branch system," said Lawrence Cohn, a senior banking analyst with Merrill Lynch Capital Markets. "It obviously says there was room for tightening up."

Citibank's payroll includes 10,000 branch employees in New York City, Long Island, and Westchester County. Ms. Weeks estimated that about 300 jobs will be lost through attrition. The layoffs will range from vice presidents to assistant managers but will not include clerical staff, she added. The nation's largest banking organization will attempt to find jobs for about 700 other workers within the company, she said, but is making no guarantees.

The retail banking sector — dubbed the "individual bank" in Citicorp jargon — will restructure in New York along functional lines. Currently, New York City is divided into four regions

MARKETING MANAGEMENT

Existing Customers Are 'Money in the Bank'

By LEONARD L. BERRY

FINANCIAL INSTITUTIONS can increase market share three ways. One way is to attract more new customers, another is to do more business with existing customers, and a third is to reduce the loss of customers.

The smart marketer pursues all three avenues aggressively. Attracting new customers is merely an intermediate step in the marketing cycle. The real challenge is to create true customers. An institution's true customers are those who are glad they have selected the institution, customers who feel they are receiving value and who feel valued. True customers are more satisfied than other customers and, as a result, are more likely to buy additional services from the institution and less likely to leave it for a competitor.

A rising trend in financial services marketing — one that will continue to build for years to come — is existing-customer marketing. Existing customers are, as the saying goes, money in the bank. They are already started with the institution, already familiar with its procedures and special quirks. To the extent that existing customers can be turned into true customers, they represent the very best opportunity to increase market share.

Existing-customer marketing is not a substitute phrase for relationship banking. Relationship banking can be done at various levels and in its purest form is a subset of existing-customer marketing. Pure relationship banking is pursued with carefully selected market segments and built on the foundations of core service packages, account representatives, and relationship pricing. "Client" is the essential watchword. Existing-customer marketing is a broader concept than relationship banking, one that can be applied to all customers. Among its key ideas are the following:

Berry Says:

To the extent that existing customers can be turned into true customers, they represent the very best opportunity to increase market share.

- Woo existing customers as though there were brand new prospects. All customers have had the disappointing experience of being wooed before the sale and then forgotten after they sign on the dotted line. Smart bankers will continue to woo customers after the sale. They will contact customers by telephone or letter soon after a new account is opened or a service purchased to thank them for the business. They will monitor — informally and formally — customer satisfaction levels with the service mix available and the quality of service provided. These bankers also will find ways to stay in touch with customers over time, periodically reselling the benefits of the relationship.
- Treat existing customers as family. They should enjoy the special status of family member. Big institutions will have larger families than smaller institutions, but the principles remain the same: information, communication, and loyalty.

Information about individual customers is needed to serve them as if they are family. Institutions that have not yet built customer information systems that provide relevant information to bankers, where and when they need it, are behind the marketing eight ball and had better get on with the job of eliminating such a serious handicap.

Good communication is also central in family life. Just as savvy retailers alert customers to upcoming sales or hold pre-sales just for them, bankers should send their customers advance notices of grand openings, new service introductions, policy shifts, and other meaningful developments. Bank newsletters, magazines, and seminars also can be used to efficiently convey information to customers, educate them, and in general, make them feel special. The telephone remains a marvelous method of reaching customers to inform them of an important new service tailored to their specific requirements, to tell them that their account is overdrawn but that quick action can avert a service charge, or to simply ask if there is any way the bank can be of additional service.

A third characteristic of strong families is that members stand by one another in times of need. Similarly, existing-customer marketing is bolstered to the extent that a financial institution's people always try to find a way to help customers within the confines of sound banking practice. Banks earn loyalty from customers by being loyal; by insisting on "you win, we win" rather than "you lose, we win" transactions; by helping customers find just the right financial solutions, even if that means not selling the local service; by pulling the plug on delinquent borrowers only after all other options have been tried.

It will always be so: a family's or a bank's long-term success is built on the fundamentals of commitment and integrity.

- Be great at problem resolution. The most important dimension of service quality is reliability, which means keeping the service promise. A reliable bank is one that does for customers what it said directly — or implied — it would do. Accuracy and meeting deadlines are important values in a reliable institution.

Bank managements should strive for totally reliable service. The No. 1 goal should always be zero defects. After all, anything other than zero defects by definition means that some customers are receiving a defective service.

Realistically, some bank customers will receive defective service even in the best managed institutions. Banks are human institutions, and human beings are imperfect. Thus, the No. 2 goal should be to respond to broken service promises — when they arise — with speed, competence, and courtesy. Banks that are great at problem resolution are far more likely to repair the damage done than are institutions that lack a sense of urgency about customer problems.

Coming through for customers when something goes awry can be very impressive because customers are so used to being treated as though they have a disease when they contact a company to get a problem solved. In effect, since customers are used to having problems, solving problems provides a rich opportunity to exceed their expectations.

Being great at problem resolution is simpler in concept than in execution. It requires educating the customer on what to do when a problem occurs. It requires having enough staff to handle the load and having special staff who are talented, resilient, and well trained. It requires pushing authority downward, so the problem can get fixed on the first contact with the customer. Greatness in problem resolution requires that management take the long view toward building a business, rather than the short view of maximizing profits next quarter.

Existing-customer marketing is a formal step. It requires research, creativity, planning, and execution — just as marketing to new customer prospects requires these elements.

Is existing-customer marketing expensive? It depends on one's perspective. If one thinks of marketing as an expense, the answer is yes. If one thinks of marketing as an investment in building tomorrow's business, the answer is no. I particularly like the way Alexander "Sandy" Berry of Signet Banking Corp. in Richmond, Va., answers the question. He states that excellent marketing to existing customers involves "heart, not things." Sandy Berry is a smart banker. He understands the simple essence of existing customer marketing: love your customers and they will love you back. ■

Dr. Berry is Foley's/Federated Professor of Retailing and Marketing Studies at Texas A&M University and director of the Center for Retailing Studies. He is a past president of the American Marketing Association.

ECONOMIC PERSPECTIVE

Dollar's Drop Has Not Led to Import Decline

By ROBERT J. SAMUELSON

THE RHETORIC AND reality of the U.S. trade deficit are sharply at odds. Listen to the rhetoric, and the United States is slowly becoming an economic has-been.

Slipping technological prowess and a poor work force are making us an oversized Paraguay. Look at the reality, and another story emerges. The trade deficit doesn't reflect lack of competitiveness so much as the huge pulling power of the U.S. market. It's the world's richest, most accessible market: an enormous global bazaar where everyone wants to sell.

If the United States were so uncompetitive, then U.S. exports would be faring poorly in world markets. They aren't. Since late 1985, the volume of U.S. exports has risen by more than 20%. That's impressive, especially because economic growth abroad has been slow. Once the dollar began to depreciate from the extraordinary heights of the early 1980s, U.S. exports responded smartly. But imports are a different matter. The trade deficit persists because, despite the dollar's depreciation since early 1985, imports haven't declined.

Go to a well-stocked toy store, and you can see what's happening. There are jigsaw puzzles from Germany and Britain. The import surge doesn't stem only from foreign companies invading the United States. U.S. companies are also buying and manufacturing products abroad to defend their traditional markets. Fisher Price sells plastic roller skates made in Taiwan. Another U.S. firm offers a 24-piece tool set with tools made in Hong Kong and Poland.

Little wonder that everyone so covets the U.S. market. In 1985, consumer spending was three times higher in the United States than in Japan and 25% higher than in the European Community. Total investment spending was 86% higher in the United States than in Japan and 14% higher than in the European community. The U.S. market is also more open. Europe is a jumble of national markets with separate languages and customs; Japan has a cumbersome and closed distribution system. By contrast, the United States offers a genuine national market with a single language and an efficient distribution system.

The dollar's 60% appreciation between 1980 and 1985 was a competitive windfall for foreign exporters. They could either cut prices or fatten profit margins. They did a bit of both. Economist Richard Baldwin of Columbia University makes an important point: Fatter profit margins enabled many foreign firms to establish a beachhead in the U.S. market. The higher profit margins covered heavy start-up expenses for advertising and distribution networks. Strong U.S. economic growth further expanded the demand for imports.

Half a Theory

But the dollar's subsequent drop isn't quickly reversing the flood of imports, precisely because the U.S. market is so big and important. In theory, a depreciating dollar makes U.S. exports more competitive while imports be-

TECHNOLOGY TODAY

Bankers Cast Their Votes on Cash Management Issues

Cash Management

Seventy-six of the nation's 100 largest banks responded to the *American Banker*'s third annual cash management survey, which was mailed in September. The tabular results are printed below.

Among the participants were 20 of the largest 25 institutions, based on deposits, and seven of the top 10. The respondents were instructed to include the value of bank-retained float and compensating balances in determining the profitability of services. Percentages do not always add up to 100% because of rounding.

The responses have been listed in several categories: overall (all respondents), top 25 banks, banks ranked 26 to 100, and regionally — Northeast (NE), Southeast (SE), Midwest (MW), and West (W).

Here is how the states are grouped:

Northeast: Connecticut, Massachusetts, Maine, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Southeast: Alabama, Arkansas, Delaware, Florida, Georgia, Louisiana, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia, and Washington, D.C.

Midwest: Iowa, Illinois, Indiana, Kansas, Kentucky, Michigan, Minnesota, Missouri, North Dakota, Nebraska, Ohio, Oklahoma, South Dakota, and Wisconsin.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Nevada, Oregon, Texas, Utah, Washington, and Wyoming. ■

1. For accounting and reporting purposes, how is your cash management department regarded within the bank?

	Total (%)	Top 25 (%)	26-100 (%)	NE Reg (%)	SE Reg (%)	MW Reg (%)	W Reg (%)
Cost center	48	35	53	42	64	50	33
Profit center	16	40	7	17	5	19	27
"Shadow" profit center	36	25	40	42	32	31	40
Sample	**76**	**20**	**56**	**24**	**21**	**16**	**15**

2. If run as a profit center, is the value of bank-retained float and compensating balances included in the department's profits?

	Total (%)	Top 25 (%)	26-100 (%)	NE Reg (%)	SE Reg (%)	MW Reg (%)	W Reg (%)
Yes	57	82	41	75	50	57	43

Profitability Is the Big Question In Evaluating Cash Management

→ Continued from Page 1

senior bank managers recognize that they have "a highly viable and potentially profitable group of products that is a source of continual, ongoing annuity-type income," he said.

This banker called cash management income the ideal offset for shrinking loan profits.

As foreign-bank competition, loan losses, and commercial paper continue to undercut interest profits, bankers have acknowledged the need to tap new sources of noninterest income. Many are looking to their cash management departments to fill the gap.

The *American Banker*'s third annual survey on cash management focused on profitability, as well as on emerging issues that can change the industry's future.

Questionnaires were mailed to the nation's 100 largest banks with cash management departments, and 76 banks responded. The respondents include 20 of the top 25 banks and 7 of the top 10. (Other results were published Monday and Tuesday. The full tabular results appear on page 18 today.)

68% Track Profits

Evidence that banks are trying to get a handle on costs and revenues comes from the survey finding that 68% have systems in place that track the profitability of individual cash management offerings, up slightly from 66% last year.

Among the top 25 banks, 95% track individual profitability — as was the case last year. For banks ranked 26 to 100, 59% track specific products, up from 55% last year.

While these banks track product revenue, trying to sell cash management services on a strict product-profitability basis can pose difficulties.

"Profitability came into play because of competition and a view that [cash

Profitability: Page 20 →

Is Ownership Worth the Cost?

Bankers consider ownership of balance-reporting systems to be a viable option for their cash management operations, according to an *American Banker* survey.

While most banks today do not own the computer systems that provide account balance information to their corporate customers, many would consider purchasing such a system over the next two years, the survey finds.

Balance-reporting systems are owned by 44% of the top 100 banks, while 56% use services such as Automatic Data Processing, GE Information Services Co., Bank-Link, and others to supply balance data.

But an overwhelming 88% of third-party users would consider purchasing their own systems over the next two years, the survey finds. Only 7% would not.

"Cost control is the real reason banks go in-house," says Stephen Holahan, a vice president at Connecticut National Bank, Hartford. "It also gives you more control over the products you offer as well as day-to-day reliability."

Connecticut National is now in the midst of transferring its cash management information and initiation services from an outside party to an in-house system.

The largest banks are more likely to own their balance-reporting systems, the survey finds: 75% of the top 25 already own these systems. Of those that do not, almost two-thirds will consider purchasing such a system over the next two years.

Now Plus System® ATMs Will Be Among The Most Popular Attractions In New Orleans.

New Orleans' renowned French Quarter offers a unique experience for millions of tourists each year. Amidst this old world charm and throughout New Orleans, visitors will soon be able to access PLUS SYSTEM Automated Teller Machines (ATMs). Mr. Joseph V. Wilson III, executive vice president of First National Bank of Commerce, was instrumental in bringing First NBC into the internationally shared PLUS SYSTEM ATM network.

"Our decision was driven by the exceptional leadership we saw within the PLUS SYSTEM organization," cited Mr. Wilson. "Other factors included the recent Visa affiliation and the PLUS SYSTEM network's strong geographic coverage. We wanted to give our customers the high level of service and convenience they now have through our tie with the GulfNet regional network, but on an international basis. The PLUS SYSTEM network's broad coverage and continued rapid growth coupled with its excellent service record satisfied our objectives extremely well."

Isn't it time your financial institution joined the leading ATM network as a PLUS SYSTEM member? For complete details on all the options available, call Ron Reed at Plus System, Inc., (303) 620-7318.

Profitability Is the Big Question In Evaluating Cash Management

Customers want to pay one price for everything. That's somewhat at odds with the way we want to sell.

➻ **Continued from Page 19**

management products] are both commodity-oriented and part of a customer relationship," explained Charles Stebbens, a vice president at Chemical Bank.

"We at Chemical are arranged on a product basis and we have to identify profits for each product. But customers want to pay one price for everything. That's somewhat at odds with the way we want to sell."

The less-than-stellar performance of treasury workstations exemplifies what can happen when banks overemphasize product profitability, he adds. When marketing the workstations, banks sought to profit directly from the product's revenues rather than from the bank transactions the workstations enabled corporations to initiate.

"We are reevaluating from the customer-access side the type of electronic products we give to our customers," he said. "We are now looking to profit from the underlying transaction — not the product itself." The bank is preparing to sell more application-specific microcomputer-based products, Mr. Stebbens added.

Once again, bankers at the top 100 have identified the same three cash management services as the most profitable.

Controlled disbursement generated the highest net profits at 29% of the banks, wire transfer at 22%, and account reconciliation at 16%. In the past two surveys, the same services headed the most profitable list.

This year, the *American Banker* also asked how banks prefer to be compensated for cash management services — through fees, compensating balances, or a combination of the two. Fees may be preferred by banks because they are direct and easily measurable.

If interest rates are low, compensating balances — keeping noninterest-bearing funds on deposit at the bank providing the service — may be preferable because net compensation is greater than with fees. Generally, it is believed that balances provide more compensation for banks.

The survey results backed this up: 63% of the top 100 preferred compensating balances, while only 9% preferred fees; 25% picked a combination of the two.

Fees were slightly more popular at the top 25 than they were overall: 15% of this group preferred fees, but 70% preferred compensating balances. Another 15% chose a combination of the two.

Charges for Deposit Float

Banks that clear checks for corporate customers may soon be compensated for the large amounts of deposit float they can incur. Reserves must be set aside and federal deposit insurance fees must be paid for items in the process of collection. As was the case last year, 51% of the respondents agreed that in the next few years, banks will start charging their customers for deposit float. This year 16% strongly agreed, up from 6% last year.

The survey also found that few institutions have changed their formal accounting structures. Almost half of the top 100 still run their cash management departments as cost centers, which focus on tracing and accumulating expenses, but not direct revenues. Last year, 54% were structured this

Citicorp, Western Union Escalate War of the Wires

➸ Continued from Page 6

rassment, Citicorp said.

"By requiring that an independent outlet which wishes to offer Western Union's electronic message services must refrain from offering Citicorp's public money transfer service, Western Union is abusing its marketing power . . . to enhance and maintain its monopoly power in the public money transfer market," said the antitrust complaint.

The federal lawsuit filed in New Jersey does not specifically mention Citicorp's attempt to recruit Supermail, the largest Western Union money transfer agent in California, to act as a Citicorp agent.

On Oct. 30 Western Union obtained a restraining order from the U.S. District Court for the Northern District of California, San Francisco, preventing the defection of the Supermail agents. "We had a contract with Supermail, as we do with all of our agents, for the exclusive provision of our money transfer services," said Warren Bechtel, spokesman for Western Union. ■

Profitability . . .

➸ Continued from Page 20

way. For the top 25, 35% operated their departments as cost centers, as was the case last year.

Some banks organized as cost centers can track product profitability, however. "We manage our customer relationships in terms of customer profitability," explained Michael W. Paulette, a senior vice president at Sovran Bank in Richmond, Va.

"We can take that data and slice it to show individual products, and then we have a product profitability system. If relationship management is not paramount at your bank, I can see organizing into a profit center," he continued. "But the size we are, relationship management serves us well."

Only 16% of the top 100 banks run their cash management departments as profit centers, where direct profitability is a key goal and an important consideration in operating decisions. This is a slight decrease from last year's 17%.

Cash management profit centers are more popular at the top 25 banks: 40% of this group are structured as profit centers, up from 30% last year.

But one northeastern banker pointed out that this group does not necessarily do a better job tracking profitability. "Profit centers don't automatically imply that banks have a good handle on profitability," he said. "What you choose to call yourself just doesn't matter."

Another 35% of the top 100 banks do track their revenues and costs, but to a lesser degree than those set up as profit centers. These banks have organized their cash management departments into "shadow" profit centers — a hybrid category in which revenues and expenses are monitored, but only on a pro forma basis for illustrative purposes. Last year, 29% were organized this way. ■

IBM and The Kirchman Corporation invite you to a special live television broadcast —

"Banker to Banker: A User's Perspective on the Advantages of In-House Automation."

DATE: *Tuesday, December 8*
TIME: *2:30–5:00*
PLACE: *200 IBM Customer Centers*
RSVP: *Call your local IBM representative or Woody Woodall at The Kirchman Corporation, 1-800-TKC-IMAP.*

If you are a growing, independent community bank and are considering — or would like to hear first-hand — the advantages and difficulties of going to in-house automation, don't miss this presentation.

IBM and The Kirchman Corporation — the industry leaders — have assembled a panel of bankers like you who have recently gone through a conversion to in-house information management. You'll hear everything they went through to get there. IBM Customer Centers around the country will be carrying this live broadcast. They have made special arrangements for you and your staff to attend as our guests. You'll be treated to refreshments, a full question and answer session and new IBM product previews. There's never been a better way to get the real story on in-house automation from those who recently went through it — from both the hardware and software perspective.

Don't miss this milestone broadcast. Reserve your places now by calling your IBM representative or Woody Woodall at The Kirchman Corporation at 1-800-TKC-IMAP. The knowledge you and your staff will gain is invaluable. Call today.

"Banker to Banker: A user's perspective on the advantages of in-house automation."

'Less Volatile' Mortgage Gains in Popularity

California Lenders Pioneer Use of Adjustable Home Loan Tied to Longer Index

By PHIL ROOSEVELT

NEW YORK — A type of adjustable-rate mortgage that has swept California appears to be gaining favor with lenders in other parts of the country.

The loans, with interest rates tied to the Federal Home Loan Bank of San Francisco's cost of funds index, are touted as less volatile than other ARMs. They already account for an estimated 75% of all California ARMs.

The loans received a further boost earlier this week when the Federal National Mortgage Association, or Fannie Mae, began a program of purchasing the loans for its portfolio.

Citing that program, First Union Mortgage Co. said it will start originating the loans from its 32-state retail network next week. First Union, based in Charlotte, N.C., is one of the nation's largest mortgage companies.

"We're going to offer it nationally," said Larry M. Dew Jr., senior vice president of First Union's residential division. "It's mainly for our California market, but we're hoping it will catch on back East, too."

Some other eastern lenders have been considering offering the loan to meet competition from western-based lenders operating in their markets.

THRIFTS & MORTGAGES

"It's kind of a new animal in this area," said Robert J. Rocklein, senior vice president of production at Commonwealth Mortgage Co., Wellesley Hills, Mass. He added, however, that at least one California lender in New England "seems to be doing very well with it" and that Commonwealth is plotting a response.

The broadening interest in loans tied to the cost of funds index at the 11th Federal Home Loan Bank District comes as adjustable mortgages are overtaking fixed-rate loans in popularity. Some 54% of all new mortgages in September were ARMs, up from just 22% in March.

Most of the adjustable mortgages outside California, however, have been linked to indexes of U.S. Treasury securities.

The mortgage tied to the 11th district index, which was pioneered in 1981, features relatively stable interest rates, or less "payment shock"

A VIEW FROM OUTSIDE

MARTIN MAYER

Exporting Money

THE MOST recent report from the Bank for International Settlements came to this country during the week the dollar teetered on the edge of the cliff. It made rather melancholy reading for those of us who believe that U.S. banks should to some degree serve American national interests — or at least not disserve them — in their international activities.

This is not the first time around for this problem. In the late 1970s, one very large U.S. bank — which I've left nameless before and will leave nameless again — added somewhat to its earnings by selling the dollar down in Hong Kong and Bahrain (there was no Tokyo market in those days), and then restoring the book to a more or less balanced condition in London and New York.

As the dollar was under pressure anyway, this daily drop at the opening tended to bring in additional sellers, so that the task of replenishment was easy.

The result, however, was a steady tendency for the dollar to close the day below the opening. Then as now, there were fools in the U.S. government who placed a higher value on flows than on stocks and thought well of a declining dollar.

But eventually even the regulators grew tired of this behavior. The Federal Reserve Board organized a couple of effective squeezes on some stretched shorts, and the Office of the Comptroller of the Currency outlined for the top management of this large New York bank just what it might mean for them over time to have the boss of the national bank examiners eager to find something wrong in their

Key Senators Compromise On Bank Bill

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Legislation repealing key sections of the Glass-Steagall Act was introduced in the Senate on Thursday, following a compromise between Senate Banking Committee Chairman William Proxmire, D-Wis., and Sen. Jake Garn of Utah, the panel's ranking Republican.

Mr. Garn's willingness to cosponsor the measure was a key strategic victory for Mr. Proxmire, who appears to lack sufficient support among Democratic committee members to report out a bill. With Mr. Garn and other Republicans who would be expected to follow, Mr. Proxmire has moved a sizeable step closer to assembling the 11 votes he needs to bring the bill to the Senate floor.

"The fact that Senator Garn and Senator Proxmire have gotten together gives the bill real momentum going into early 1988," said J. Denis O'Toole, the American Bankers Association's senior Capitol Hill lobbyist. While Mr. Garn's support does not assure the bill's passage, it permits it to begin life as a bipartisan effort.

"It's too early to begin counting noses," said Karen Shaw, who follows banking legislation for the Institute for Strategy Development. "But this is now a realistic bill."

The Senate Banking Committee is expected to hold hearings Dec. 1, 2, 3, and again on Dec. 8 and 9 on the Proxmire-Garn compromise bill and others that have been introduced. The panel is not expected to begin a mark up, or vote, on the bill until next year.

While the legislation is being given reasonable odds of prevailing in the Senate, it is expected to run into a number of roadblocks on the House side. House Banking Committee Chairman Fernand J. St Germain, D-R.I., is generally thought to be hostile to a Glass-Steagall overhaul, as is Energy and Commerce Committee Chairman John D. Dingell, D-Mich.

Mr. St Germain has already begun hearings on financial services industry restructuring, as has Rep. Edward J. Markey, D-Mass., chairman of the Energy and Commerce subcommittee on telecommunications and finance.

Proxmire: Page 30 ➻

Corrections

A listing on Nov. 13 of the top 300 mortgage firms contained several errors.

California Mortgage Service, Santa Ana, understated its servicing business. The firm should have ranked as the 120th largest mortgage company, with $1.408 billion in mortgages serviced for investors on June 30, up 0.4% from a year earlier. The firm should not have been listed among those companies with the largest losses in servicing business.

Huntington Mortgage Co., Columbus, Ohio, was servicing $854.1 million for others as of June 30 and should have ranked as the 164th largest mortgage company in the nation. The company, an affiliate of Huntington Bancshares Inc., was inadvertently omitted from the listing.

BancOhio Mortgage Co., Columbus, had $721.1 million in servicing, which made it the 179th largest mortgage company at midyear. The company inadvertently omitted servicing for affiliate banks from its servicing total. This year's servicing is 7.7% higher than a year ago. Thus, the company should not have ranked among firms with the largest servicing losses. ■

CREDIT LINES

Western Union's Lenders Turn Off Spigot

By PHILIP T. SUDO

NEW YORK — The lending consortium for **Western Union Corp.** has refused to extend the company's loan commitments, citing the firm's precarious financial condition.

The commitments, which expired last week, involve a group of 31 banks, led by the Chase Manhattan Bank, Bank of America, and National Westminster Bank PLC.

The banks may now demand immediate repayment of all of Western Union's outstanding loans, approximately $227 million as of Sept. 30. Should the banks press for repayment, Western Union indicated it may file for protection under Chapter 11 of the bankruptcy code.

It was the first time the banks rejected Western Union, which has suffered losses since 1983. The expired commitment, originally an override agreement reached in January 1985, consisted of three lines of credit totaling $335 million, with an additional loan of $12 million. The agreements were regularly extended every three to five months, until Nov. 13, when the last one expired.

AN **American Banker**
WEEKLY FEATURE

Western Union, based in Upper Saddle River, N.J., is hopeful that the banks will accept, as part of its currently pending restructuring plan, a settlement of the debt at a substantial discount. The complex proposal calls for a merger of Western Union into its subsidiary, Western Union Telegraph Co. New York investor Bennett S. LeBow, who is seeking to acquire ITT World Communications Inc., would then fold ITT into Western Union Telegraph — if and when his acquisition is complet-

Analysts Say Foreign Banks Lag in Bonus Plans

Bank Executives at Conference Also Urged to Keep Eye on Legislative Activity

By JAMES R. KRAUS

NEW YORK — Foreign banks operating in the United States should examine incentive payments, developments in Washington, and changes in interstate banking if they want to develop a successful growth strategy, consultants advised foreign bankers at a symposium here.

Wednesday's event was organized by Peat Marwick Main & Co., the Big Eight accounting and consulting firm. Executives for the company noted that incentive payments are lagging at foreign banks and are hampering their efforts to recruit qualified personnel.

They predicted that modifications of the Glass-Steagall Act — which have now been introduced in the Senate — are likely to be limited. They warned that choosing the wrong state in which to obtain a banking charter could hamper foreign banks as interstate banking expands.

"New York's a tough place to find and retain talented people," said Daniel R. Gattis, a principal at Peat Marwick specializing in executive recruiting. The problem, said Edward R. Freher, another principal at the firm, is acute for foreign banks because their incentives lag behind those of U.S. banks. Opportunities they offer for professional advancement are also more limited.

Mr. Freher said special incentive plans are growing rapidly at U.S. banks as they expand, and these banks place a higher emphasis on profitability and cost control.

In contrast to U.S.-owned banks where estimated salary increases will average only 6.4% but incentive pay will increase, increases at foreign banks will average 7.2% but incentive pay will lag.

Peat Marwick conducted a survey on incentive pay last spring at 70 New York-based foreign banks. It indicated that only 54% of their chief lending officers were eligible for incentive pay,

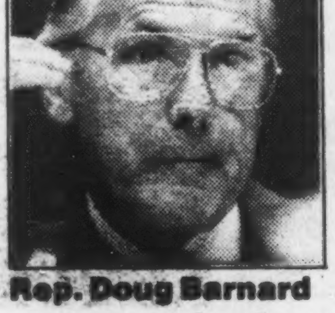
St Germain Outlines Plan to Fight Insider Abuse

By JIM McTAGUE
Washington Bureau

WASHINGTON — If banks get more powers, the agencies that regulate them should get more people to combat fraud, House Banking Committee Chairman Fernand J. St Germain, D-R.I., testified Thursday.

Rep. St Germain also said that bank privacy rights have to give way to law enforcement when a breach of trust is strongly indicated.



Rep. Doug Barnard

The House Banking Committee will draft a bill addressing the problem of privacy and insider abuse, he said. Most likely, the proposal would facilitate the transfer of customer data between banks and law enforcement officials. Now, law enforcement agencies cannot obtain any bank records without first issuing subpoenas to customers.

Mr. St Germain was one of several witnesses who discussed bank fraud before the subcommittee on commerce, consumer, and monetary affairs of the House Government Operations Committee.

Regulators Downplay Problem

Subcommittee Chairman Doug Barnard Jr., D-Ga., says bank fraud has reached "epidemic proportions." But the heads of the major banking agencies strongly disputed his claim.

"The majority of banks fail the old-fashioned way, because of a combination of poor management and economic conditions," said Robert L. Clarke, comptroller of the currency.

"We should not lose sight of the fact that most national banks are free of insider abuse. To say that insider abuse at banks is widespread or of epidemic proportions is unfair to the vast majority of men and women who routinely perform their banking functions in a safe and lawful manner," Mr. Clarke stated.

H. Robert Heller, a member of the Board of Governors of the Federal Reserve System, said most cases of criminal conduct that are referred to the Justice Department "involved relatively small sums of money that did not, in any material manner, affect the safety and soundness of financial institutions."

He noted, however, that the incidence of such crimes seems to be growing and that fraud is playing a significant role in the failure of some state banks.

L. William Seidman, chairman of the Federal Deposit Insurance Corp., said the impact of fraud on his agency has declined somewhat since 1985.

Mr. Barnard said preliminary numbers point to at least a $4.5 billion price tag for fraud at the deposit insurance funds.

St Germain Cites Failures

And Mr. St Germain said that insider abuse has played a part in one-third of the bank failures and half the collapses of savings and loans. He said he could not accept the conclusion that these cases "do not pose a threat to the stability of the system."

Other suggestions likely to come out of the hearing:

- Increased use of outside audits by commercial banks. The banking agencies are close to an agreement that would regulate the use of annual independent audits for banks with assets from $100 million to $150 million.
- Greater responsibilities for outside auditors. Mr. St Germain said he will hold hearings on independent bank auditors to explore fraud and abuse by some of those professionals.
- Greater emphasis on exchanges of criminal-investigation information between the Justice Department, the Internal Revenue Service, and the banking agencies.
- More manpower for the Justice Department to combat financial fraud.
- More judges to hear the cases.
- More use of enforcement actions by the banking agencies. In 1985 and 1986, the number of enforcement actions declined at banking agencies with the exception of the Federal Home Loan Bank Board, the subcommittee said.
- Stiffer sentencing guidelines for those convicted of bank fraud. Law enforcement officials said the robber who holds up a bank for $1,500 is likely to draw considerably more prison time than the insider who steals $15 million.

"They're back on the golf course in no time," said Anton R. Valukas, United States Attorney for the Northern District of Illinois. ■

A VIEW FROM OUTSIDE

Continued from Page 1

operations.

Now, following some years of responsible behavior, the boys would seem to be at it again, en masse. After 1983, when our current account deficit began spiraling out of control, American banks became net takers of funds in the international markets. They helped the U.S. government pay the nation's bills much as the Brazilian banks helped Brazil finance its rapidly accumulating international debt until the markets closed on them in late fall 1982.

From mid-1986 to April 1987, for example, U.S. banks reduced their net creditor position — repatriated capital — by a total of $35 billion, which probably took care of a third of our current account deficit.

In the second quarter of 1987, however, American banks became again, as they had been in the dear departed years of our trade surplus, net suppliers of dollars to the world. They expanded their external assets by $8.2 billion more than the growth of their external liabilities.

This multiplied the quantity of dollars available to private parties for the purchase of marks, yen, and other foreign currencies, and thus added to the policy problems of the German, Japanese, and other central banks. In order to keep the dollar from falling through the floor in spring 1987, the central banks of Japan, the Common Market countries and, to a lesser extent, the new tigers of Asia, had to buy at least $70 billion of U.S. government paper and add it to what was already a heavy load of official holdings.

Paul Volcker's Fed had similar problems in the early 1980s, when foreign money was pouring into America. But we then refused to print new dollars and acquire instruments denominated in marks, yen, or pounds.

Instead, the Fed sterilized the inflow of funds from foreigners by reducing its own holdings of Treasury paper to hold down the money supply, keeping interest rates high enough to chloroform our inflation. After all, as the rest of the world remembers and we seem to have forgotten, we were creditors in those days, and when interest rates went up our current account improved.

It is still as true as it was in George Washington's day . . . that nations do not have permanent friends or enemies, only permanent interests.

IN THE SECOND quarter of 1987, the Germans and Japanese decided by contrast that they would permit the inflow of funds from America to enlarge their money supply, keeping their interest rates well below U.S rates, at least for the time being. By inflating their currencies, they made it possible for the Fed to hold down the growth of M-1 in the United States, which had been clearly excessive for the preceding year.

It is still as true as it was in George Washington's day, of course — especially in the economic sphere — that nations do not have permanent friends or enemies, only permanent interests. Our trading partners were giving us this assistance in large part because they were hooked on exporting to us, and we could not import unless they lent us the money to do so.

Still, they were being helpful, and they certainly deserved better thanks than the denunciation they got from Treasury Secretary James A. Baker 3d. He insisted that they had failed to live up to their obligations under the Louvre agreement because they were not stimulating their economies.

But most economic theories — including those espoused by the present chairman of the Council of Economic Advisors — argue that what our trading partners did with their money supply in the second quarter was highly, indeed dangerously stimulative of their own economies.

The last time these countries permitted the United States to cast them in the role of "locomotive," in 1978-79, we saw a worldwide inflation that was very painful to extinguish.

The Germans and Japanese are not necessarily wrong to remember experiences less than 10 years old, and we are not necessarily right to forget them. And we are certainly wrong to hector these people about the need to keep interest rates low only five years after our Federal Reserve drove the short-term rates the world pays on its debt to 14%-15%.

Such disputes have been with us a while, and it has not been entirely clear what brought them to a head this summer and early fall. The data from the Bank for International Settlements may provide an explanation.

LIKE WATER RUNNING uphill, private money in the second quarter moved from a high-interest-rate to a low-interest-rate environment. The activities of the U.S. banks turned up on the wrong side of the balance sheet.

Americans, unfortunately, still don't see that what they call "diversifying abroad" — when they do it — is indistinguishable from what they call "capital flight" — when it is done by people whose native language is not English.

Because they could see the proceeds of official loans to this country returning to their shores in the form of private acquisitions of their assets, Japan and the Common Market countries became increasingly reluctant to maintain the patterns of their lending to us. As they began to sterilize the inflow of funds, their interest rates began to rise. Ours had to follow, with the results we have seen.

Ways to handle this problem are not easy to find. Even if we wished to impose exchange controls, we couldn't make them work.

And what foreign exchange business our banks didn't do if we kept them from exporting money, other people's banks would pick up soon enough. Still, we will have to find some way to discourage the sort of thing that happened in 1978-79 and again in the second quarter of 1987.

Perhaps our old friend disclosure could help. Why not include in the call reports, and make the information publicly available, a quarterly statement of the net import or export of dollars by each bank?

Then customers who have reason to fear a whirlpool of decline in the dollar will be able to exert a little private-sector suasion on their banks. And the Treasury, which now has this jug-eared, toothy, what-me-worry look whenever anyone talks about the dollar, might learn what's going on. ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reasons of space and clarity.

Remember, we need your views to be a true community newspaper.

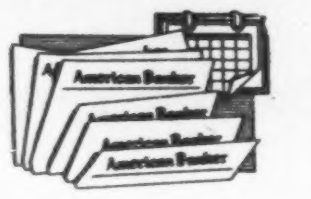
FLASHBACKS

What made news in the *American Banker* this week...



50 Years Ago

- A coin purported to be a 1913 Liberty Head nickel, found by a 13-year-old Texas boy, was called a probable forgery by coin experts. Although a die was cast for a 1913 Liberty Head nickel and several trial coins were later struck and sold to collectors, the Buffalo nickel was designed and distributed that year. Experts speculated the coin found in Texas was a forgery of a 1903 nickel, done by skilled engravers.
- J.P. Morgan returned to New York aboard the Queen Mary following his annual goose-hunting vacation at his lodge in Scotland. Upon his arrival, he declined to answer questions about the stock market, taxes, or politics. "I have nothing to say and I am going to say it," he told reporters.
- An adviser for the World's Fair in New York told New Jersey banks that the show would open, on schedule, on April 30, 1939. Kenneth M. Murchison, formerly the vice president of the Central Savings Bank of New York, said "a lot of visitors may not like the so-called functionalism of the architectural style and may sigh for the grandeur of Chicago's 1983 Columbian Exposition, but I am sure that New Yorkers are going to be proud of their 'World of Tomorrow.' "

20 Years Ago

- A tighter monetary policy was expected from the Federal Reserve Board after the weekend devaluation of the British pound. Eli Shapiro, professor of finance at Harvard University, said the Fed no longer had to worry about the effect a tighter monetary policy would have on the pound. "Instead," he told bankers in Chicago, "they are more concerned with protecting the dollar now that the pound has been devalued."

10 Years Ago

- New York State Lieutenant Gov. Mary Anne Krupsak told a Savings Bank Association conference, "If you're interest in getting more savings from people, you yourselves should start to pay women salaries equal to what you pay men for comparable work." Citing recent class-action suits, Ms. Krupsak said, "It will be cheaper for you to raise salaries and start training programs voluntarily."
- President Carter signed legislation extending for one year deposit rate ceilings that had been in effect since 1966. Regulation Q, as the statute was known, was due to expire Dec. 15. It was used by federal agencies to limit savings rate and to give thrifts a competitive advantage in attracting deposits.

5 Years Ago

- President Reagan became the first President to address the U.S. League of Savings Institutions. "Your industry faced chaos in 1980," he told thrift executives meeting in New Orleans, but said his economic program was "beginning to do exactly what it was intended to do. The sun is shining on thrifts again."
- In an unprecedented meeting held on short notice, officials of the International Monetary Fund urged representatives of 18 international banks to maintain or increase their lending to Mexico and Argentina to tide them over credit difficulties.
- C.T. Conover, the comptroller of the currency, told the American Bankers Association's conference of chief financial officers that country lending limits might be placed on banks in light of concern over loans to lesser-developed nations. He said that while his agency was not developing such limits, he expected Congress would act on the matter.

1 Year Ago

- United Oklahoma Bankshares Inc. applied for open-bank assistance from the Federal Deposit Insurance Corp. for its Oklahoma City subsidiary. The application sought assistance for the United Oklahoma Bank, Oklahoma City, according to the holding company's quarterly public disclosure report submitted to the Securities and Exchange Commission.

Banks are getting closer and closer to bailing out of the program.

Craig Ulrich, general counsel for the Consumer Bankers Association, on the guaranteed student loan program. [Page 1]

Random Thoughts

By SANFORD ROSE

The following consists of excerpts from a talk on the "Implications of Interest Rate Movements on Bank Profitability," delivered by the author at the fall executive seminar of Golembe Associates Inc. on Nov. 19, 1987.

Let us postulate a model of economic behavior that has prevailed in the past and may, unfortunately, continue to prevail in the future. Despite considerable tinkering, fiscal policy does not turn sufficiently restrictive to moderate overconsumption, and monetary policy is not equal to the task of taking up the slack. Monetary policy, attuned to the exigencies of election-time politics, stays easy.

Then the job of curbing overconsumption remains with the foreign sector. Foreigners continue to bid down the value of the dollar, which raises interest rates.

More precisely, as the fall in the value of the dollar pushes up the prices of imports and import substitutes, the real value of the public's cash balances declines. To rebuild the worth of their holdings, people add to their bank balances, even if that means reducing goods pur-

Deficit Reduction Law Makes Loans To Students Less Profitable for Banks

By ROBERT M. GARSSON

Washington Bureau

WASHINGTON — The spending cuts ordered on Friday by President Reagan under the Gramm-Rudman-Hollings deficit reduction law make guaranteed student loans a little less profitable for banks.

Already, the spreads guaranteed banks had been reduced by 25 basis points, or a quarter of a percentage point, in last year's budget. Now, they have been cut again by a quarter point.

"Banks are getting closer and closer to bailing out of the program," said Craig Ulrich, general counsel for the Consumer Bankers Association, a trade group for banks and thrifts involved in retail lending. Now, the process is likely to accelerate.

"There's been some fallout already," he said. "Marine Midland has significantly reduced its marketing efforts by about 60% and transferred the savings to other departments."

The across-the-board Gramm-Rudman cuts, or sequestration, as it is known, would be rescinded if the deficit reduction package that congressional and White House negotiators agreed to on Friday is enacted.

But the student loan cuts, which took effect last month under guidelines issued by the Department of Education in anticipation of the sequestration order, are likely to be accepted in the deficit reduction package, Mr. Ulrich warned.

On Friday, the White House and congressional leadership agreed to a two-year, $76 billion package of tax hikes and spending cuts. Although a number of details were not spelled out, particularly on the revenue side, it is widely expected that any tax package Congress approves will contain a number of provisions affecting banks.

Gramm-Rudman: Page 31 ➔

S&L Deposits At US Banks Drop by 9%

Thrifts Increasingly Use Fees to Pay for Services

By L. MICHAEL CACACE

NEW YORK — Thrift correspondent balances at commercial banks — which grew by almost 60% from 1984 to 1986 — fell by 9% this year, according to a survey by the *American Banker*.

A major factor in the decline is that fees are rapidly taking the place of compensating balances as thrift's main form of payment for correspondent services.

Increased competition from regional Federal Home Loan banks is another factor in the decline. There has been growth in the check-clearing services that the regional Federal Home Loan banks provide to thrifts.

Another new provider of thrift correspondent services are thrifts themselves. Some of the larger thrifts have begun to develop their own networks to provide correspondent services to smaller thrifts.

Therefore, the decline in balances does not signal an end to the growth in correspondent services the thrift industry demands. Rather, the decline reflects the dynamic changes occurring

RANDOM THOUGHTS

Continued from Page 1

chases or selling bonds, which raises interest rates. Thus the depreciation does its job and overconsumption is reduced.

If the Federal Reserve does nothing to blunt these effects, there need be no inflationary upsurge. Some prices — those of internationally traded goods — rise by more than the inflation rate, while the decline in effective demand causes other prices to rise by less than the inflation rate or leads to actual price declines. But if the Fed resists the rise in interest rates by providing excess reserves, the stage is set for an inflationary revival. Short rates may stay low temporarily, but soon begin moving up.

Given the assumption of higher interest rates and a pickup in inflation, what is the effect on bank profitability and especially on net interest earnings? Superficially, the answer would seem to depend on whether banks are asset sensitive or liability sensitive.

If the duration of the assets is less than that of the liabilities, rising rates will increase net interest earnings and declining rates will pinch them. This statement abstracts from changes in spread relationships — shifts in the basis. It is possible for institutions to be asset sensitive and still not benefit from rising rates because of a deteriorating spread relationship between asset and liability rates.

□ □ □

More importantly, it is not easy to determine whether one is asset or liability sensitive. Information derived from the cumulative or periodic gap is notoriously treacherous. Many institutions thought they were liability sensitive in 1986, but margins declined as rates fell.

One reason was that as rates fell, mortgage prepayments speeded up. An unforeseen bulge in cash inflows had to be reinvested in a declining rate environment. Otherwise put, mortgage prepayments pushed the duration of the assets below that of the funding liabilities.

Many institutions still report negative gaps, and some analysts argue that their postures are even more liability sensitive than is revealed by these untrustworthy gap numbers. The reason is that, in the desire for liquidity, banks have raised a lot of medium-term money. But, expecting declining rates, they promptly swapped out — that is, they did reverse interest swaps, agreeing to receive a fixed payment and make a floating one, which has the effect of reducing the liability duration and rendering the institution even more exposed to the threat of rising rates than is implied by the published numbers.

Nevertheless there is a large group of banks — particularly those with good loan demand and retail deposits — that are more likely to be asset than liability sensitive, regardless of the influence of swaps or what the gap numbers suggest. As far as I can gather, most banks put prime-based assets and MMDA deposits into the one-to-30-day gap bucket. Nominally, this is correct. Effectively, it is erroneous.

The prime is probably still around a 30-day rate. But the duration of the MMDA, theoretically very short, is in statistical reality quite a bit longer — outside of New York, that is. Indeed, its duration is probably several months, meaning that banks which fund prime-based assets with the MMDA are asset sensitive.

Since the prime-MMDA relationship tends to drive short-term earnings, I suspect that most regional, retail-oriented institutions benefit from a rise in rates. That is, their margins benefit. Whether overall earnings go up is another matter. If the institution depends heavily on, say, mortgage banking revenue, a rise in rates could severely weaken it by drying up originations, although the increasing value of free escrow funds might tend to cushion the shock.

□ □ □

If rates continue rising for a reasonable period of time, nearly all banks, even those that are liability sensitive in the short run, stand to benefit — that is, their net interest earnings will improve. The reason is that banks are naturally asset sensitive, in that they have more interest-bearing assets than interest-bearing liabilities. There is thus the potential of indexing more of the left side than the right side of the balance sheet.

Given time, bank assets tend to become more "real" — that is, they become inflation-adjusted claims on customers. Bank liabilities tend to remain more "nominal." That is especially true of demand deposits and capital, which do not pay any explicit interest, but which fund assets that are interest-bearing and whose rates can, in principle, be fully adjusted to the increased inflation.

True, when inflation heats up, the cost of servicing and compensating demand depositors also rises, adversely affecting the return on assets, though not necessarily the margin. But the adjustment to increasing rates tends to lag and be very incomplete.

Thus when rates move up for an extended period of time, the accounting earnings of banks increase. A recent study of the Federal Reserve Bank of New York pointed out that during the period 1977 to 1984, when rates were for the most part on the rise, the effect of the interest rate climate was to increase bank reported net interest margins by far more than the impact of deregulation and money fund competition weakened those margins.

If rates should rise for the next few years, the impact on net interest margins would likely be even more positive because deregulation is probably more or less complete, and demand deposits are now at an irreducibly low level.

□ □ □

If the foregoing is correct, why is it that the stock market has always bid down the price of bank equities whenever rates rose and inflation impended? The answer seems to be that although nominal earnings are increasing, real after-tax returns may be falling.

In inflationary environments, the required rate of return moves up, so banks must be sufficiently asset sensitive to raise nominal earnings by more than the rise in required returns. Otherwise their stock valuations will at best stagnate. The tax system, to the extent that it is not indexed, makes this quite difficult to accomplish.

Suppose a bank had $100 in interest-bearing assets, $90 in interest-bearing liabilities, and $10 in equity. Suppose further that inflation was zero, and asset yields were 6% while liability rates were 5%. Profits would be $1.50 ($6 on assets minus the $4.50 liability cost). The return on equity, both nominal and real, would be 15%.

Now assume 5% inflation, reflected immediately in both asset and liability rates. Asset yields go to 11% and liability rates to 10%.

Nominal profits rise from $1.50 to $2 because the bank is asset sensitive by the amount of its $10 equity and so reprices more assets than liabilities in a rising rate environment. The nominal return on equity rises to 20%. But the 5% inflation has eroded the value of the $10 equity by 50 cents. Hence the real return on equity is $2 minus 50 cents divided by the initial $10, or 15%.

So, assuming modest asset sensitivity, earnings rise but inflation wipes out that increase and just preserves the real return on equity. Now let's incorporate taxes which are levied on all earnings, whether nominal or real.

If the $2 in nominal bank earnings are taxed at 20%, after-tax profits are $1.60. The nominal return on equity falls from 20% to 16%, and the real after-tax return drops all the way to 11% — $1.60 minus 50 cents divided by the $10 equity. The interaction of inflation and taxes has effectively reduced bank returns.

□ □ □

If equity values are to be preserved in a period of rising rates, financial institutions must be very asset sensitive indeed. Thrifts can probably never attain this rate-sensitivity posture because they don't have demand deposits. Banks in theory can, provided they can maintain virtually complete indexation of their asset yields while simultaneously preventing the demand depositor from indexing his return.

However, even if banks can achieve this posture, there is much doubt that they would. For example, a major California bank, avowedly an asset-sensitive institution, has calculated the degree of increased asset sensitivity that would be necessary to insulate its stock price from inflationary pressures.

It finds that the increase would be very great. Since the bank is unwilling to expose itself so sharply to a decline in nominal earnings if rates fall, it will probably not attempt to alter its sensitivity posture to the degree required. Hence if rates resume their rise, nominal earnings will go up, but the stock price may still go down.

To recapitulate: Leaving aside its effects on credit quality, which are probably positive in the short run and negative in the long run, inflation raises the earnings of banks in an accounting sense because they have more interest-bearing assets than interest-bearing liabilities. Whether banks can benefit in real terms depends on the relationship between the volume of fully adjustable assets and liabilities

In order to raise nominal profits sufficiently to offset the effects of both higher required rates of return and augmented taxes, banks would have to materially increase the ratio of real assets to real liabilities.

Whether they can do so is problematic, given the existence of potentially capped or incompletely indexed asset yields. And even if they could do so, they might not choose to because of the threat of falling nominal profits if inflation and interest rates change course and decline. ■

CORRESPONDENT BANKING

Not Enough To Go Around

By Suzanne Christy

WHEN ONE OF THE MOST INFLUential banking associations in the nation decides to change the name of its correspondent banking committee, it should serve as a clue that the once-sacred correspondent cow is undergoing a metamorphosis.

The transformation is particularly apparent to the American Bankers Association executive members, who once served on the former correspondent banking committee and now meet under the name of financial institutions division. Yet, points out an ABA spokesperson, "All the members are really correspondent bankers."

These renamed correspondents are not exactly feasting in a thriving market. While the emergence of superregional institutions is creating some large and hungry departments, increasing mergers also mean fewer medium-sized banks — typically the largest users of correspondent services. At the same time the upstream players are growing fatter, the respondent market is shrinking and doling out thinner slices of the budget for correspondents.

Adding fuel to the fire, correspondent departments have not escaped unscathed in this period of constriction, when companies across the board are trying to stem the flow of red ink. In many cases, U.S. correspondents are discovering that a foreign bank will process the big deals, such as providing letters of credit for imports, through its own subsidiaries. That leaves only the tiny — and less profitable — transactions for U.S.-based correspondents to handle.

This trend picks up speed, say analysts, as banks continue to manage their balances even more vigorously, in the process seeking more concrete cost-benefit performance. In a story starting on page 12, consultants at Greenwich Research Associates explain how foreign banks are now tempted to "make rather than buy" various services.

Diminishing markets are not confined to foreign shores, points out Dorothy Hinchliff in her article on page 20. Once considered the fastest growing segment of the market, thrift executives are reassessing services. The electronic transfer of funds, to cite but one development, and the greatly improved communications network available to bankers and nonbankers alike have unquestionably reduced the dependence of respondents — not only on the traditional correspondent relationship, but on the usual products.

And though by no means newsbreaking, "the hysteria surrounding the Federal Reserve's ingress into the check-clearing marketplace is not letting up," says one analyst.

The shakeout that began with the Monetary Control Act of 1980, which allows the Fed to charge for check processing services it formerly offered for free, is not only continuing but spurring sharper competition and more dynamic products. In an article beginning on page 17, reporter Rob Wright examines how the federal government competes with approximately 150 private corporations, making the check processing marketplace somewhat of a national oddity.

OVERVIEW

The shuffle has reshaped more than mere departments and methods. The evolution has touched upon the actual participants themselves, many of whom face a slew of new demands. "The correspondent banker of old who shook hands, slapped backs, and bought drinks is gone," says Peter D. Crist, managing director at Russell Reynolds. "He's a dinosaur."

Account representatives and other insiders tell how they fight off extinction in Merri Rosenberg's article on page 16. Many see it as an opportunity to grow beyond their traditional markets. Newly hatched niches range from "treasury cluster" services to investment and merchant banking.

But not all old demands have been buried. In fact, some bankers claim the dollar volume of loan participations has exploded. Sales have been fueled by the flexibility the participations provide for banks that want to either increase or decrease their outstanding credits, coupled with such trends as megabuck leveraged buy-out financing.

Advice on what banks should consider before lending to other banks is offered in the American Bankers Association and Robert Morris Associates' white paper on loan guidelines. "The handshake is still the basis for relationships," explains one of the guideline's founders, "but now you have to document it."

Though faced with complex obstacles, correspondent banking is hardly obsolete. One analyst sums it up by explaining, "The zebra has just changed its stripes a bit." ■

Superregionals Alter Way Banks Sell

Fewer customers means further turmoil in a jumbled market.

David Satterfield is a business writer for the Miami Herald.

By David Satterfield

THE WORLD OF CORRESPONDENT banking, which has already undergone dramatic changes on its own in the past decade, is being further reshaped as regional banks develop into giant interstate institutions.

The emergence of superregional banking companies is rapidly changing the nation's overall financial scene, from the new signs on street-corner branches to increased competition for big corporate customers.

The transformation goes directly to the root of the industry. The creation of superregional banks is changing the way bankers serve their colleagues.

From the Southeast to Northwest, giant banking companies have recently formed as states lift barriers to interstate mergers. And analysts expect the trend to continue, with the industry consolidating even further.

In many ways, this is not good news for the traditional correspondent banking business.

More mergers mean fewer medium-size banks, which are those in the $1 billion to $10 billion asset range — the most typical users of correspondent services. This decline trickles down to mean fewer sizable customers for correspondent banking operations — further turmoil in an already jumbled

Continued on Next Page

Continued from Previous Page

market.

The industry's consolidation is coming at the same time the Federal Reserve Bank has moved aggressively into correspondent banking, thereby compounding the challenges. On top of these factors, many thrifts and foreign banks are turning to in-house departments to handle services that were formerly farmed out.

It's Not Bleak House

But there are positive results as well. As the giant banks form, they are creating new opportunities, as well as new needs, for correspondents.

"There's no doubt the business is changing just because of shrinkage in the market," says Robert Aiken, vice president and manager of the financial institutions group for Pittsburgh National Bank, the largest bank owned by Pittsburgh-based PNC Corp. "In this business, we can't think the way we did four or five years ago, or we'll be out of it."

The way in which superregional mergers are constructed often affects the way in which correspondent departments are structured. In some situations, there are few changes after the merger; in others, there are dramatic modifications.

Banks are using various strategies in creating superregional companies. Some, such as Charlotte, N.C.-based NCNB Corp., are acquiring banks and consolidating them into the parent. Others, such as PNC and Los Angeles-based First Interstate Bancorp, are giving their affiliate banks more autonomy.

Big and Small Benefits

Bankers, however, generally agree that superregional status has had an industrywide impact on correspondent banking.

Large banks are reaping benefits called "intangibles." Simply because of the larger size and strength of superregionals, officials say it becomes easier to sell services to banks looking for a stable supplier. Likewise, small-bank executives like to be affiliated with strong, growing upstream correspondents.

"What it gives us is an intangible," explains William J. Penn, senior vice president at Providence, R.I.-based Fleet National Bank. The strategy at Fleet is to target smaller regional banks and community banks under 1.5 billion in assets. Mr. Penn says, "Bankers like to deal with other bankers who are successful. With our size and strength, we have the proven ability to do things right."

Likewise, larger size means more employees, and thus more ideas for new products, services, and marketing techniques.

"We're finding some ideas are being generated that we wouldn't have had otherwise," says George Campbell, senior vice president at NCNB Corp.

Superregionals are gaining economies-of-scale that did not exist among smaller institutions, particularly in services that rely on volume for profitability, such as check clearing. When mergers occur, bankers point out, correspondent executives attempt to find particular niches where the company can best compete.

> ***"What it gives us is an intangible. Bankers like to deal with other bankers who are successful. With our size and strength, we have the proven ability to do things right."***

Mergers also are giving correspondent bankers the opportunity to expand beyond traditional markets. By merging or acquiring more banks, correspondent bankers immediately gain new customers. And if the institutions developed are of sufficient size, some bankers are choosing to expand beyond their region.

Niches Are Necessary

Likewise, bankers are trying to develop expertise in particular areas of correspondent banking. They say they must target a certain "niche" of the market and earn a reputation as a quality provider of those specialized products or services.

The merger of Winston-Salem, N.C.-based Wachovia Corp. and First Atlanta Corp. into First Wachovia Corp. joined two banks with ambitious correspondent operations. But each bank gained the other's expertise in particular fields, and that savvy is being marketed nationwide, says William Farr, executive vice president of First Wachovia Corporate Services, a subsidiary of the holding company, which oversees the correspondent banking of both banks.

Superregionals

Before the merger, Wachovia had an active correspondent consulting department, while First Atlanta had a more sophisticated check-clearing operation. Today, the consulting business is used companywide and most check clearing is done through the Atlanta operation.

"We almost automatically became a bigger force," Mr. Farr says. "It was a made-in-heaven deal."

Through acquisitions, superregionals also immediately gain more customers for correspondent operations.

First Interstate Bank of California, for instance, uses its correspondent department to supply loans and investments to its affiliates throughout the West, even though most of those affiliates have their own correspondent

operations.

"We create a lot of loans that are handed off to affiliates," says Armando Gonzalez, vice president at First Interstate.

Downstreams Seek Upstreams

Formation of superregionals is not just changing the way banks are providing products and services. It also is affecting the demands of superregionals on their upstream correspondents — which typically are money center banks headquartered in New York.

Some insiders at the money centers, such as Chase Manhattan Bank, are prepared to turn the situation around. "While [superregionals] provide more competition, they also provide opportunities," says Daniel Kane, vice president in the domestic banking division at Chase.

Mr. Kane says the flurry of large bank mergers has created a need for acquisition financing as well as merger and acquisition consulting.

"That's something that wouldn't have happened three years ago," he explains.

As superregionals have grown, some institutions have developed the need for better access to capital markets, particularly overseas markets. New York banks are gaining new customers looking for that access, Mr. Kane says.

Fleet's Mr. Penn agrees.

"The emergence of superregionals has changed the products money-center banks offer," he says, adding that though it acts as a correspondent itself, Fleet relies on its upstream banks for access to capital markets as well as back-up credit facilities.

For some banks, however, superregional status brings a degree of freedom from their upstream correspondents. Because of their larger size, some superregional bankers find it economical to develop their own capital markets operations. Not only can these operations support the bank's own needs, but they can also be marketed to smaller customers through the correspondent department.

"That's been a benefit to us and our correspondents," says Mr. Campbell at NCNB.

Correspondent banking executives at superregional institutions are eager for further deregulation of the banking industry.

If banks gain securities, real estate, or insurance powers, bankers say they will be able to increase the number of products offered to smaller banks. Because of their size and proximity to local markets, superregional executives say, further deregulation could be a boon to the correspondent business.

"With those services, the smaller banks will look to someone," says NCNB's Mr. Campbell. "And they'll look to their upstream bank." ■

Dear Reader, How Are We Doing?

American Banker wants very much to provide you with articles that are both interesting and useful. Would you take a moment to give us some feedback on today's special section on **CORRESPONDENT BANKING**? We hope to use your suggestions to make our special sections more valuable. Please return this questionnaire to Patricia Stundza, Feature Editions Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212-943-5733).

The Answer:

TRW Credit Data Services. TRW computerized the consumer credit data business, and was the first to take it nationwide. Today, through its mastery of technology and large data base management techniques, TRW provides its customers with current and accurate credit information on 138 million consumers across the country. Credit information with substance and integrity. And, through the smart application of artificial intelligence, the information is protected by a data base security system that is unparalleled in the industry.

It's the only credit reporting system backed by the resources and demonstrated performance of TRW Information Systems Group. A group of businesses that provide the highest quality information products and services to the financial, retail, real estate and general business communities across the nation.

These products and services include: Large computer system engineering and integration. On-target direct marketing analysis and support. TRW CREDENTIALS℠ Service for the consumer. Customized high-speed bank check, payment receipt and document processing. Local area network design and installation. Repair and maintenance on more than 1,800 different computers, systems and peripheral equipment. Uniform, accurate residential real estate appraisals. Credit reports on 138 million consumers. And a multitude of other information products and services... from a single source you can rely on... a company called TRW.

Europeans Rely Less on U.S., Turning to In-House Units

Foreign banks begin to create their own subsidiaries as high technology and cost-cutting trends reshape field.

By Thomas N. Troxell Jr.

THE STEADY CONSOLIDATION that has been taking place among U.S. correspondents who provide services to banks in Europe is not only continuing, but is actually accelerating. Moreover, most signs point to a continuation of this trend over the next few years, perhaps even to the point where the existence of international correspondent banks will be the exception, and not — as they have been for so many years — the rule.

Thomas N. Troxell Jr. is a New Jersey-based financial writer.

A potpourri of factors — from an increasing emphasis on cost efficiency to technological advancements — have contributed to a decline in the number of U.S. correspondents used by European banks.

The electronic transfer of funds, to cite but one development, and the greatly improved communications network available to bankers and nonbankers alike, have unquestionably reduced the dependence of U.S. and European banks on the traditional correspondent relationship.

When one adds this factor to the decreasing profitability of the relationship and the growing emphasis on increased earnings at most U.S. banks, it is easy to understand why the whole concept of relying on correspondent banks to handle certain aspects of business is becoming not only less popular, but actually outmoded in many respects.

In fact, European banks are coming to rely more and more on their own branches and affiliates in the United States for correspondent services.

"European Correspondent Banking 1986," a study published by the Connecticut-based market and research firm, Greenwich Associates, shows that whereas in 1984 only 21% of the European banks used their U.S. units for one or more of the key correspondent services, such as check collection, by 1986 some 34% of those same banks were using such units either exclusively or to a greater extent than their correspondents.

The consolidation movement picked up speed as banks began to manage their balances more vigorously, in the process seeking more concrete cost-benefit performance. They have become more tempted to "make rather than buy" various correspondent services, according to the Greenwich study.

All of this, in turn, stems from stockholders' increasing cries for top-level management teams. Alan Abelson, a *Barron's* columnist, points out that "it's much more difficult being a banker these days than it used to be in the 'good old days,' when all you had to do was get up in the morning, put on your dark blue suit, and practice saying 'No' a few times in front of your mirror before you left for work." Now, bankers are subject to far more criticism and outside scrutiny.

Inevitable by-products of these evolving outside pressures have been improved earnings and a significantly greater return on assets. But a closer examination of the books has also revealed that for many, correspondent banking has been an expensive — and in many respects, relatively unprofitable — segment of banking in recent years.

The growing emphasis on "make rather than buy," which has characterized the correspondent banking business in recent years, is plainly and simply a matter of costs — and, of course, ultimately, profits. The growing tendency on the part of major American banking institutions to buy quality services and avoid credit risks has been directly responsible for the steady but modest decline that has taken place in principal relationships in the last five years, reports the Greenwich study.

At the same time, active correspondent accounts have decreased almost 20% in the last five years, with more than three-quarters of this decline taking place since 1984.

The study reveals that in recent years there has been a rapid rise in the stricter use of foreign currency balances: Dollar sight balances — bal-

The power of foresight. Worldwide.

In a complex world where even the slightest changes in economic factors can have widespread repercussions, foresight is essential.

As the top-ranking European bank firmly established among the world's leaders, BNP puts its intimate knowledge of world economies to work for you.

With offices in 76 countries, BNP monitors international markets 24 hours a day, gathering and analysing up-to-the-minute data to keep you fully abreast of market changes. With a specialized teleprocessing network and one of Europe's most advanced trading rooms, BNP offers clients the advantage of constantly updated, clear and precise market reports to help them determine the right moment to act, in Europe... and throughout the world.

BNP

Banque Nationale de Paris. World banking is our business.

ances payable upon demand — in the United States have remained flat over the past couple of years, despite the greatly increased demand for this currency. Sterling balances have faced a similar situation.

In both the United Kingdom and the United States, the larger the European correspondent customer, the more substantial the negative change in balances has been.

Free Ride Is Over

Inevitably, the fundamental changes in the nature of the correspondent business have led to various reactions on the part of some of the other players in this game, and how they do business.

Pricing in the United States, for example, has become much more explicit, with fees as well as balance compensation not only encouraged, but actively pursued. Surprisingly enough, the growing emphasis on explicit fee payment has met with little, if any, opposition among the European banks that are being asked to pay these fees. Maybe, as one observer has mentioned, "They — the Europeans — know they've been getting what amounts to a free ride for many of their services for a long, long time."

There is a debate in the industry on the effect the Japanese are having on the field. And while the consensus seems to be that the impact is minimal, given the incredibly fast pace at which Japan is emerging as a world banking power, it would seem to be only a matter of time before the Japanese begin to exert their influence.

What exact form this move will take, however, and just how quickly it will come about, are questions still unanswered. As one industry source puts it, though, "It's only a matter of time; if the Japanese see any opportunity to make money in this area or to otherwise extend their influence over the international banking scene, you can be sure they'll move in a really big way."

Meltdown Abroad

The slow but steady decline of the importance of U.S. correspondent banks has had a somewhat mixed impact on their European clients.

By and large, reveals the Greenwich study, the effect varies according to the size of the European bank involved: 20% of the European banks over $10 billion in size report their number of active accounts increased during the 1984-86 period, while 42% say they have decreased their total number of accounts; this represents a fairly significant net decrease of some 22%.

In terms of countries, by far the largest decline during that period came in the Netherlands, where the banks surveyed report a net decrease of 64% in the total number of their active U.S. accounts. This was the largest decrease of any country included in the survey; Italy was second, with a decrease of 40%, followed by Switzerland and the United Kingdom, each with 33% declines. At the other end of the scale, the two countries experiencing the smallest declines were Belgium and Spain.

As the Greenwich study reports, changes in sight balances are closely related to the size of banks' assets, with the largest banks reporting the greatest declines. (Only 20% of banks with more than $10 billion in assets reported growth in their balances with their U.S. correspondents, well below the mean from countries other than the U.S.)

While the move away from correspondent banking is nowhere near as evident in the United Kingdom as it is in other parts of Europe, both U.K. and other European banks are fostering the rapid growth in the United States of branches and subsidiaries that can handle their transactions.

Especially in the case of European banks, these offices are increasingly providing all necessary correspondent services. In fact, a number of those outlets are not only servicing home offices, but actively recruiting business from other foreign banks that operate in such financial centers as New York, Chicago, and London.

The number of European banks using their own offices as correspondents has doubled since 1984. This is an unmistakable sign of change in this area. Quite clearly, the growing popularity of practices such as these indicates that it is not only easier, but potentially more efficient and profitable, for a European bank to set up a subsidiary or branch than to maintain an existing correspondent banking relationship, much less establish a new relationship from the ground up.

Clearing and treasury services currently rate as the key requirements of the Europeans. In the last couple of years, the so-called "treasury cluster" services — such as foreign exchange swaps, financial futures, and money markets — have grown most in importance to the European banks.

Just how great an influence the nature of the needs has had on the growing tendency of these same institutions

to rely more and more on subsidiaries or branches and less on correspondents is hard to say with any exactitude.

And given the fact that there are so many different elements making up the entire correspondent banking picture, it is impossible to say just where this business is heading.

But it is clearly a two-way street. Not only are Europeans cutting back on the total number of correspondents in this country, but the U.S. correspondents themselves are, at least in some cases, having second thoughts.

If there is one overall conclusion that experts draw, it is that banks — whether in this country or abroad — are going to follow the path of maximum profitability with far more diligence and passion than ever before. And if, over a period of time, it can be demonstrated that doing all this business through their own subsidiaries or branches is more profitable than carrying on the same functions via correspondents, then that inevitably is what will happen. ■

Loan Manual Aims to Curb Penn Square-Type Busts

A good reputation is not enough of a credit backing anymore; even correspondents could turn into potential defaulters.

By Pamela S. Leven

IF CORRESPONDENT BANKers could turn back the clock, they'd probably return to 1979, when Penn Square, the notorious Oklahoma City shopping-center bank, feverishly began its upstream sales of $2 billion in energy loans. In this fantasy, concerned bankers would wave red flags at correspondents, preventing them from later losing over a billion dollars and becoming embroiled in years of legal disputes.

They would also hand out copies of the American Bankers Association/Robert Morris Associates industry guidelines on loan participation agreements — the document released earlier this month to each of the nation's 14,900 commercial banks.

"I'm not so sure the Penn Square situation could have been averted because of the fraud involved. After all, they did manufacture loans. But I am sure the legal hassles could have been significantly minimized if their loan participation guidelines had been drafted in accordance with our guidelines," insists William J. Penn, outgoing chairman of the ABA's financial institutions executive committee, which drafted the 19-point guidelines. Mr. Penn is also senior vice president of Fleet National Bank in Providence, R.I.

Penn Square is the most litigated bank failure in the history of the Federal Deposit Insurance Corp.

The effects of the bust in the oil market and sloppy documentation between Penn Square and its correspondents was disastrous.

It led to the the 1982 sale of one of its correspondents, Seafirst Corp. to BankAmerica Corp. after the loss of nearly $100 million by its subsidiary Seattle-First National. The virtual collapse of Continental Illinois Bank and Trust Company of Chicago after a 1984 loss of more than $1 billion was also instigated by the Penn Square affair. Chase Manhattan Bank, Michigan National Bank, and Northern Trust Co. also lost millions.

AMERICAN
BANKERS

ROBERT MORRIS ASSOCIATES

Mr. Penn reports that his committee's 1985 decision to draft a loan participation "learning manual" for correspondent bankers was a direct outgrowth of Penn Square and other bank failures "where participants found themselves not as lenders to underlying companies, but to the originating bank."

Because of the flexibility they provide for banks that want to either increase or decrease their outstanding credits, loan sales have become increasingly popular. This is a common practice among many of the large banks in the money centers, which maintain account balances with interior banks that are given an investment outlet for their available funds in time and demand loans. Small correspondent banks use this method of investing temporarily idle funds as a substitute for commercial paper.

Spelling out Responsibilities

Eighteen months ago the ABA committee linked with RMA, an organization composed of bank credit and lending officers, to write a set of rules that they hope will eventually become part of member banks' working loan policies. Fleet National Bank has a formal loan participation policy that formed the basis of the ABA/RMA guide. Manufacturers Hanover Trust Co. policies were also used to develop the guide.

David O. Nordby, chairman of the RMA policy council and an executive vice president at Continental Illinois, notes that his group would have issued its own guidelines if the ABA had not proposed the project.

The purpose of the joint document, according to Mr. Penn, is to delineate the responsibilities of loan buyers and sellers "in a fair and equitable manner." Originating banks must provide proper financial information about borrowers; participants must make inde-

ADMARCO

Come to Italy.

A warm welcome from MPS Banking Group.

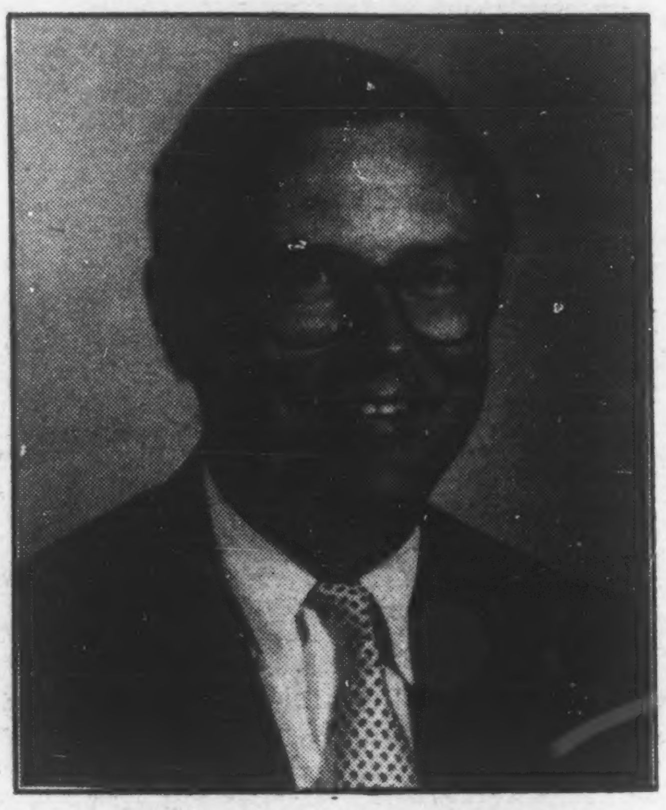
With its international network, expertise and tradition, the MPS Banking Group is prepared to handle your every banking need anywhere in the world.

Our offices in New York, London, Paris, Moscow, Frankfurt, Singapore, Cairo and Sao Paulo offer you all the advantages and services that only a large banking group can provide.

Our group figures need no comment. They speak for themselves: total deposits of 64,596 billion liras, profits of 372 billion liras, over 16,000 employees and 773 branches throughout Italy.

Wherever you find Monte dei Paschi di Siena, Banca Toscana, Credito Commerciale, Credito Lombardo and Italian International Bank, you can be sure to find a highly professional and reliable banking organization. And you're welcome at any of our offices. Welcome to Italy.

MPS
BANKING GROUP



The mover behind loan guidelines:
William J. Penn of Fleet National Bank

pendent credit analyses of the underlying documentation before entering deals. The parties must also establish remedial plans in the event that borrowers default on payments or if originator or participant banks fail.

These tips may seem simplistic, but according to the guidelines, loan buyers do not always "obtain copies of all relevant underlying documentation including loan agreements, security agreements and filings, appraisals, guarantees, mortgages, notes, etc.," and have it all reviewed by counsel. And originating banks clearly have to be reminded to check with their loan partners before changing term agreements with their borrowers.

"The handshake is still the basis for relationships, but now you have to document it," Mr. Penn observes.

Lyle E. Lawrence, group vice president at Shawmut Bank in Boston and an ABA financial institutions executive committee member, points out that the money centers and regional banks want assurances that their downstream buyers perform independent due diligence on loan purchases. Shawmut, for example, asks for certification to that effect.

The reason, Ms. Lawrence notes, is not a question of whether an originating bank can be trusted to qualify its borrower. Rather, she says, participating banks must show they are certain the purchased loans suit internal policies and market strategies.

"To rely on a name or a reputation [of the originating bank] and say, 'They make good loans,' is foolish," Ms. Lawrence says.

Dollar Volume Jumps

Mr. Penn likens the growing complexities of the loan participation market to those of mortgage lenders and their borrowers. Against the backdrop of a higher rate of personal bankruptcy cases and the growing complexity of loan transactions, "the amount of paper for mortgages has increased exponentially."

Since the Penn Square debacle, the dollar volume of loan participations has "exploded," says Mr. Penn. The activity is fueled by such trends as megabuck leveraged buy-out financing and the market entry of savings and loans and foreign banks, which lack the infrastructure to generate their own loans throughout the country.

At a time when banks are being more prudent in their risk management, participants help originating banks increase credit to borrowers beyond regulatory limits — another contributor to the growing volume.

The Fleet banker believes that without industry education of the loan market, regulators would have stepped in with "Thou shalt do this" demands. Since 1984, regulators have required that banks disclose quarterly the amount of loans sold to other banks. Earlier this year, buyers had to begin reporting their loan purchases.

In fact, regulators actually had a hand in the formulation of the guidelines. Mr. Penn reports that the document was reviewed by the Comptroller of the Currency, the Federal Deposit Insurance Corp., and the Federal Reserve Board.

> **"They didn't come back and give their blessings and stamps of approval, but they did say these were the kinds of issues they feel are appropriate."**

"They didn't come back and give their blessings and stamps of approval, but they did say that within their own review process, these were the kinds of issues they feel are appropriate," says Mr. Penn.

The ABA and RMA committees sought and won approval from their own members. Literally hundreds of bankers reviewed the document. Within the ABA, 14 members of the financial institutions executive committee wrote the guidelines and 90 managers reviewed their work at a correspondent banking conference earlier this year. It also passed through a series of reviews by RMA credit and lending officers at their programs throughout the year.

"I'm pleased that so many bankers around the country participated in the project," Mr. Penn says. "It really came home to me that a lot of people are practicing prudent loan participations."

The ABA/RMA Industry Guidelines are not likely to increase the velocity of the loan participation volume, but the document will make participations easier, Mr. Penn asserts.

"I think it will also serve as a mechanism for banks that are not generally in the participation market. They have a document that spells out the terms and conditions to include in their agreements," he says. "They don't have to reinvent the wheel with each deal." ■

The bank financial institutions bank on.

When it comes to choosing a provider of financial services, successful financial institutions bank on Union Bank.

Union Bank is a leader in providing services to other financial institutions. It was the first bank in the West to establish special banking services for the savings and loan industry. Union Bank was also one of the first banks in the country to introduce portfolio restructuring services and asset products. And we were among the first to establish a single department dedicated to serving all financial institutions.

We also have a reputation for providing our customers with responsive and professional account relationship managers.

And no matter what products or services you're looking for, you can bank on the fact that we can tailor a product or service to accommodate your needs. There are over 60 products and services available to you. Including operating services, institutional trust, consulting services and credit products. All geared to helping you remain competitive in today's demanding marketplace.

The Liberty Banking System.™

Our early commitment to financial institutions continues today with the introduction of the Liberty Banking System. Liberty helps your institution gain freedom from off-site processors. So you can meet your data processing needs in-house. Through the use of an IBM® System/36, your institution can reap benefits like improved customer service, easier profit analysis and flexibility to accommodate future growth and additional products right on site. This, of course, adds up to greater profits.

So if you're in search of financial excellence, bank on Union Bank. For more information, call Financial Institutions in Los Angeles (213) 236-7482.

Dinosaurs to Quarterbacks

To avoid extinction, yesterday's relationship managers tackle field with sales savvy, knowledge of complex products.

By Merri Rosenberg

IT MAY NOT HAVE UNDERgone a metamorphosis large enough to send bankers back to boot camp yet, but new recruits to the correspondent banking field are finding it a far cry from the party it used to be. For in the wake of major regional mergers and consolidations, increased competition from thrifts and other institutions, as well as internal shifts within the major money center banks themselves, the role of the correspondent banker has changed considerably.

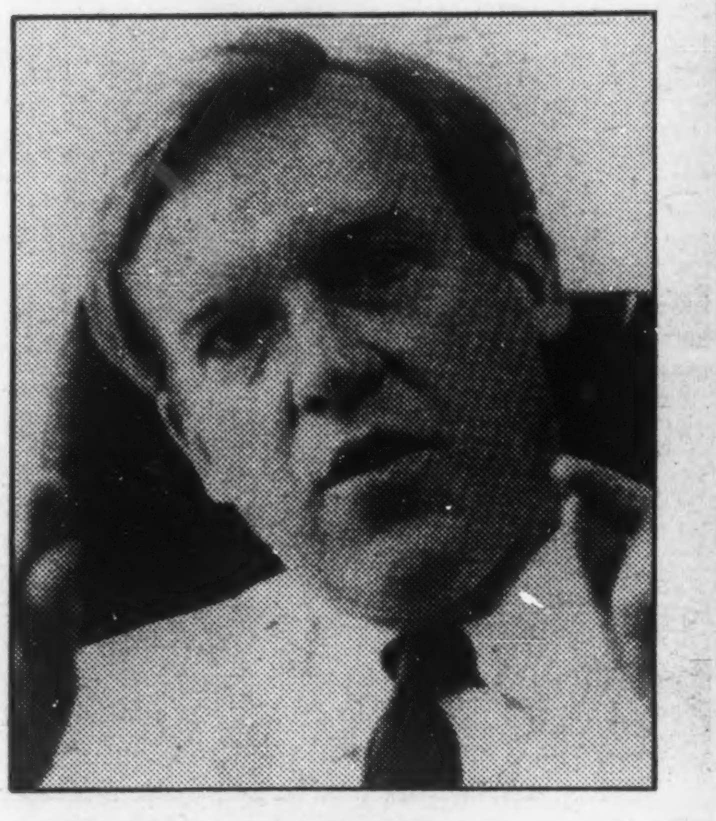
Not too long ago, according to popular wisdom, correspondent bankers were just as likely to drum up business on golf courses and at banking conventions as they were at the office. In fact, some say they used to perceive correspondent banking as a dumping ground for old-timers prior to retirement.

"The correspondent banker of old who shook hands, slapped backs, and bought drinks is gone," says Peter D. Crist, managing director of financial services practice/Midwest region at Russell Reynolds, a Chicago-based head-hunting firm. "He's a dinosaur."

If today's new breed of correspondent bankers wants to escape that same fate of extinction, they need to adapt to the changing marketplace, assert industry observers.

In the past correspondents were more likely "to understand a little about a lot of things," says Dennis Barnette, who had been a corporate and correspondent banker and is now a partner for Midwestern financial services at Korn/Ferry International, a national executive search firm. "They were the funnel for the smaller bank that channeled into the resources of the larger bank."

Yet as the respondent banks that were in need of services have merged with each other to form new, larger financial institutions, the role of the correspondent banker has had to shift. "Now when a correspondent banker goes calling on banks, he has to know a lot about a few things," adds Mr. Barnette.



Sophisticated needs drive
account officers, says former
correspondent, Dennis Barnette

"Today the audience is more sophisticated," he points out. "Smaller banks aren't truly small anymore. As the banks are grouping together, they're able to pass loans around among themselves. . . . There's a tendency among the regionals to do more operations themselves."

As regionals become larger, they don't need the same kind of services. "The new correspondent banker of today is far more oriented to a syndication role, and less inclined to the old dumping ground of loans," says Mr. Crist of Russell Reynolds.

Breeding a Different Class

So if traditional correspondent banking functions, such as check-clearing and loan management, have now been assumed by the respondent banks themselves, where does that leave the correspondent banker?

According to Mr. Barnette, who echoes the views of other industry insiders, "The smaller banks are really medium-sized, and are looking for more sophisticated products, especially in the capital markets area."

Which means, in turn, that the new breed of correspondent bankers is now apt to be specialists rather than generalists, and as adept in sophisticated financial instruments as they once were in social skills.

In fact, head-hunters and bankers paint a portrait of the successful correspondent banker that reveals an individual who has more in common with the fact-laden investment banker than with the suave salesmanship expected of a lending officer or account representative.

Social skills, in fact, have taken a decided backseat to mastery of technical financial products and services — and the subsequent ability to sell them to clients.

"If you can't count on a 30-year relationship, then there's much more reliance on sales skills," says John P. Rudy, a partner at Greenwich Associates in Connecticut, a consulting and market research firm that studies correspondent banking trends. "The ability of managers to rely on personal factors for profits is severely compromised. My conviction is that the key people in this field are increasingly business-oriented rather than people/relationship managers. They're more likely to be production-line oriented rather than tailored-product oriented."

New Routes Up the Ladder

While correspondent banking is no longer the capstone of a career, the new demands for aggressive salesmanship coupled with technical knowledge call for bankers who are well versed in a variety of functions within their own institutions — especially lending, ac-

The key to success is understanding the client, says George S. Kobus, a senior vice president at Chicago's Exchange National Bank.

counting, and capital markets areas. With their mandate to serve clients, and to tie together different specialists within the bank, correspondent bankers are frequently compared to "quarterbacks," according to John Pezzutti, senior vice president and international institutional executive at Chase Manhattan Bank, New York.

Successful correspondent bankers generally have between 5 and 10 years experience at their institutions before stepping into this role, most experts agree. According to Mr. Barnette of Korn/Ferry, the correspondent banker "should be in the middle of his career to have sufficient credibility" with clients.

For while age is not a factor, "most of the 'Young Turks' out of B-school haven't been refined," says Emanuel Monogenis, partner in charge of the financial services practice for the headhunting firm of Heidrick & Struggles in Manhattan. "They may not have enough judgment and skill — plus they may not know enough of the decision-makers and doers to deliver to the respondent bank for service. They should also be secure enough to pull in technical people when they need to."

Efficiency and speed are also desirable attributes. Since the current generation can no longer rely solely on recruiting clients at ABA conventions or through the "old boy network," cost plays an increasingly significant role in lining up new business. Now that personal relationships are no longer the primary factor in acquiring new clients, delivering services for less money has become increasingly important.

"Your willingness to move quickly is key," says Gregory S. Kobus, a senior vice president and manager of financial institutions at Chicago's Exchange National Bank, which provides correspondent services. "In many cases, you're one of several candidates. The key to [being] a successful correspondent banker is not to just say 'Yes' or 'No' to a loan, but to understand the client."

One of the prime roles that the new model of correspondent banker has come to assume is as a "mergers and acquisitions monitor," says Mr. Monogenis. Experts believe that correspondent bankers can fulfill a senior management role within their own banks by acting as internal consultants on likely takeover targets.

The ability of correspondent bankers to adapt and address the newly sophisticated needs of their clients will have direct bearing on the future survival of the field.

"With the final acts of consolidation, there will be fewer banks around,' says Mr. Crist of Russell Reynolds. "And then correspondent banking will be diminished."

Meanwhile, there is no doubt that the ball game has changed irrevocably — and the rules make it tougher for correspondent bankers.

"Apparently I missed all the fun and excitement of correspondent banking," laughs Mr. Kobus of Chicago's Exchange National Bank. Now, "it's strictly business." ■

Debate Rages On Fed's Role In Check Clearing Market

Bankers still feel the heat of heightened competition, as a more aggressive Reserve modernizes processing.

By Rob Wright

AMERICANS WRITE 45 billion checks a year, according to the best estimates of those who keep track of such things.

But turning that many scraps of paper into financial transactions is only possible with the help of Uncle Sam and the nation's largest commercial banks.

This makes the check processing marketplace somewhat of a national oddity, with the federal government competing with approximately 150 private corporations for customers. Organized nationally as 12 district banks, the Fed holds the distinct advantage of being the only truly nationwide correspondent.

Six years ago the Federal Reserve changed correspondent banking by charging for check processing services it formerly offered for free. Whether that has been good for the industry depends entirely on who you talk to.

Many in correspondent banking feel the move, mandated by the Monetary Control Act of 1980, has led to a more efficient marketplace by increasing competition. A more aggressive Fed, they say, has made banks that offer check processing sharpen their operations, and has taken some less efficient players off the scene. And few doubt

Today's Top Tellers Aren't Leading The League With Yesterday's Gear.

FROM THE WORLD LEADER IN BANK SOFTWARE!

DIMENSION 4000 TELLER TERMINAL

The system that goes far beyond exemplary customer service to provide transaction analyses and marketing reports to every area in the bank!

The Teller Terminal System from The Kirchman Corporation gives your tellers a complete electronic journal of all activity performed. With Dimension 4000 Teller Terminal software, your tellers can make on-line inquiries for balances and transaction information to give your customers maximum responsiveness. At the same time, the system tightens control over possible losses by providing immediate updates to account balances and by alerting tellers to exception conditions. The outstanding report capabilities of this system heighten bank productivity by identifying staffing requirements and monitoring operational procedures. It is flexible enough to interface with virtually any terminal hardware and may also operate in a CRT mode, allowing others in the bank to utilize its transaction capabilities. And, with up-to-the-minute reporting you now have the ability to track your market penetration and to identify products and services your customers are expecting.

Kirchman software has been used by competitive bankers in over 6,000 banks around the world for nearly two decades. We are proud to announce that IBM has recently selected The Kirchman Corporation (formerly Florida Software) as a partner in a new joint marketing program for our nation's banks.

To be sure your tellers are offering big-league service to your customers, simply call us toll free at 1-800-327-1892 or call your IBM representative. We'll send you the full details on our highly sophisticated Dimension 4000 Teller Terminal System. Thank you.

THE KIRCHMAN CORPORATION

Bank Software. It's All We Do.

Continued from Previous Page

the Fed has, in fact, helped its client banks by modernizing processing.

"We hope that some of the measures we've taken have stimulated more effective competition," says Paul Connelly of the Fed's Boston office, who coordinates the national check processing operation. "We think they have, but we realize there are conflicting opinions."

Fed statistics show that the number of financial institutions that use the agency for check processing is now up to 5,500 — almost twice as many as before the Monetary Control Act. Still, the vast majority of the nation's banks and thrifts go elsewhere for the service.

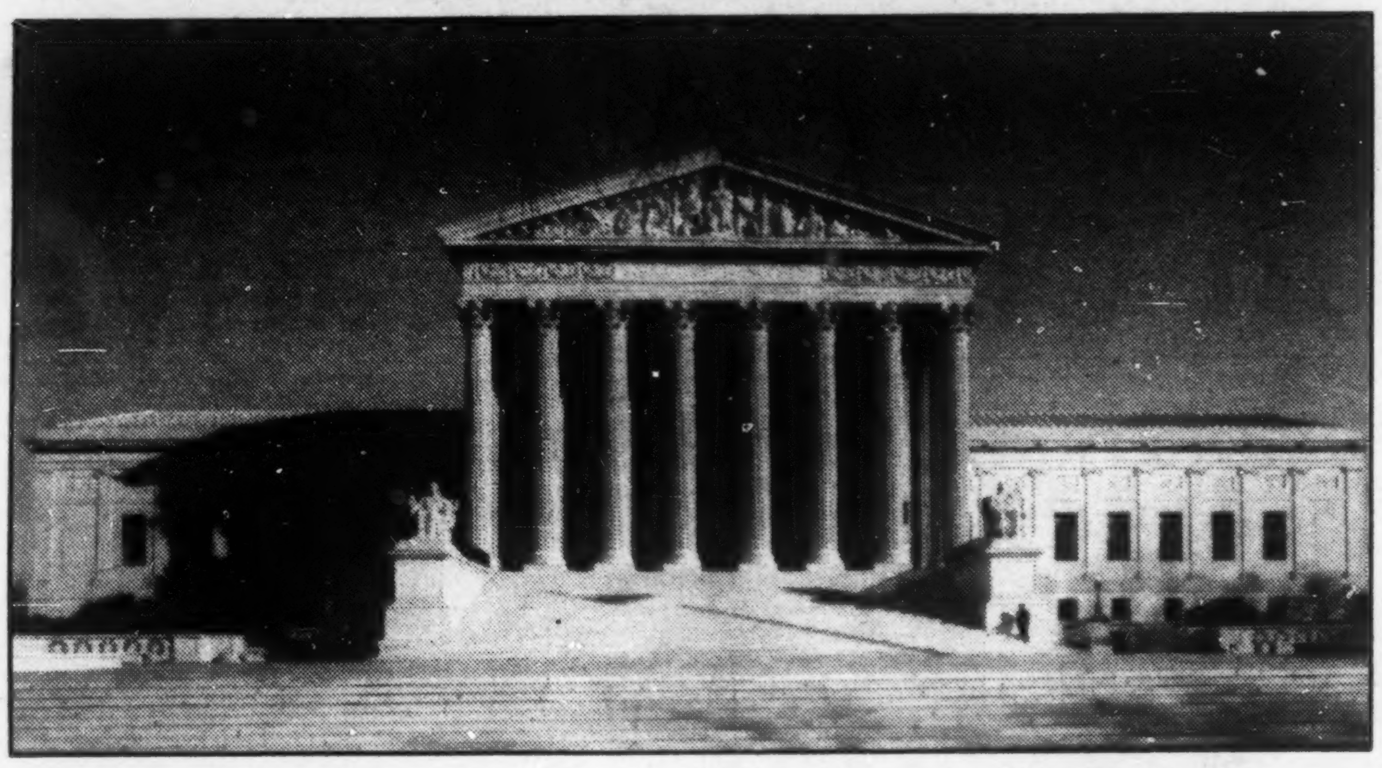
"We think the check collection system in this country works well because there are options," Mr. Connelly points out. "There's competition, and that's a healthy system."

Fed Processing Less

However, Federal Reserve Board of Governors check processing specialist Elliott McEntee notes that the percentage of the nation's checks that the Fed processes has actually dropped since the act passed. Latest estimates give the Fed a 36% market share compared to 42% in 1980, he says. So, in effect, though the number of banks using Fed services have increased, the growth is not in proportion to the percentage of banks that have entered the marketplace.

But to many in the industry, it is not raw numbers or percentages that matter so much as the more sophisticated quality that the Fed is now able to offer in check processing.

"The Fed has stepped in and provided a whole range of services that are competitive on a price base," says William J. Penn, a senior vice president of Fleet National Bank in Providence, R.I., and until recently the chairman of the American Bankers Association's correspondent banking committee. "They've become very aggressive."



At the root of the controversy is the Federal Reserve's entry into the market.

Mr. Penn says the changes have led the banks that offer check processing services to change their thinking. "Now the approach is, 'Let's beat the Fed at its own game,' " he says. "It's very good for the industry. It's done away with a lot of inefficiency."

Ned Miltko of the Philadelphia consulting firm of Littlewood, Shain & Co. points out other changes. "The upshot is that the commercial banks have learned to be much creative in competing with the Fed in clearing other financial institutions' checks."

But one check processing manager at a leading correspondent bank, Peter Sposito of Connecticut National Bank in Hartford, is not as wild about the developments.

"I don't know of another federal agency that competes with the industry it regulates," Mr. Sposito says. He stresses that no single commercial bank holds more than 1% of the check processing market share compared to the Fed's nearly 40% — a situation, he says, the Federal Trade Commission might not allow under other circumstances.

Organized nationally as 12 district banks, the Fed holds the distinct advantage of being the only truly nationwide correspondent.

Federal Reserve involvement in a business in which banks are active has been the central issue since discussions began on the Monetary Control Act in the 1970s.

"I don't mind competing with another major market-share holder with the same cost structure and profit motives," says Mr. Sposito, "but not when it's a government regulator. I think that's unfair."

Mr. Sposito says his bank, one of the major correspondents in New England, is "feeling more and more competition as time goes on from the Fed itself.

"I would say we're holding on by bobbing and weaving and carving out niches. But I tell you, we do feel the heat," he says. Yet he admits, "Their [Federal Reserve] availability schedule has gotten much better."

Mr. Sposito stresses that the Fed has four natural advantages over commercial banks in offering check processing services.

The Fed is not charged a presentation fee by receiving banks, nor does it have a realistic possibility of ever failing, he says. At the same time, it is the only U.S. financial institution with truly national capabilities, and has accounts with most of the nation's approximately 14,900 banks.

"I'm not proposing that the Fed get out of the business," says Mr. Sposito. "I'm proposing that they offer a more competitive price schedule. Systemwide, on a per-item basis, I think they're charging too little for their private sector competitors [to ever compete]."

They've Earned Their Stripes

Fed spokespeople, however, feel that they have earned their improved reputation in check processing.

Mr. McEntee of the Board of Governors staff responds that any progress the Fed has made is due to its emergence as "a very, very efficient operator in check collection." He emphasizes the effect of its Interdistrict Transportation System, a hub-and-spoke air transit network introduced in 1983 that gives respondent banks about two hours more a day than they had in 1981 to get checks to the Fed.

Mr. Connelly of the Boston Fed stresses the importance of the "high dollar group sort" program, which has allowed large bank branches outside of major cities to speed up their processing of checks. That program, he adds, compliments the noon presentment system, which is aimed at giving branches in large cities access to their checks two hours earlier each day.

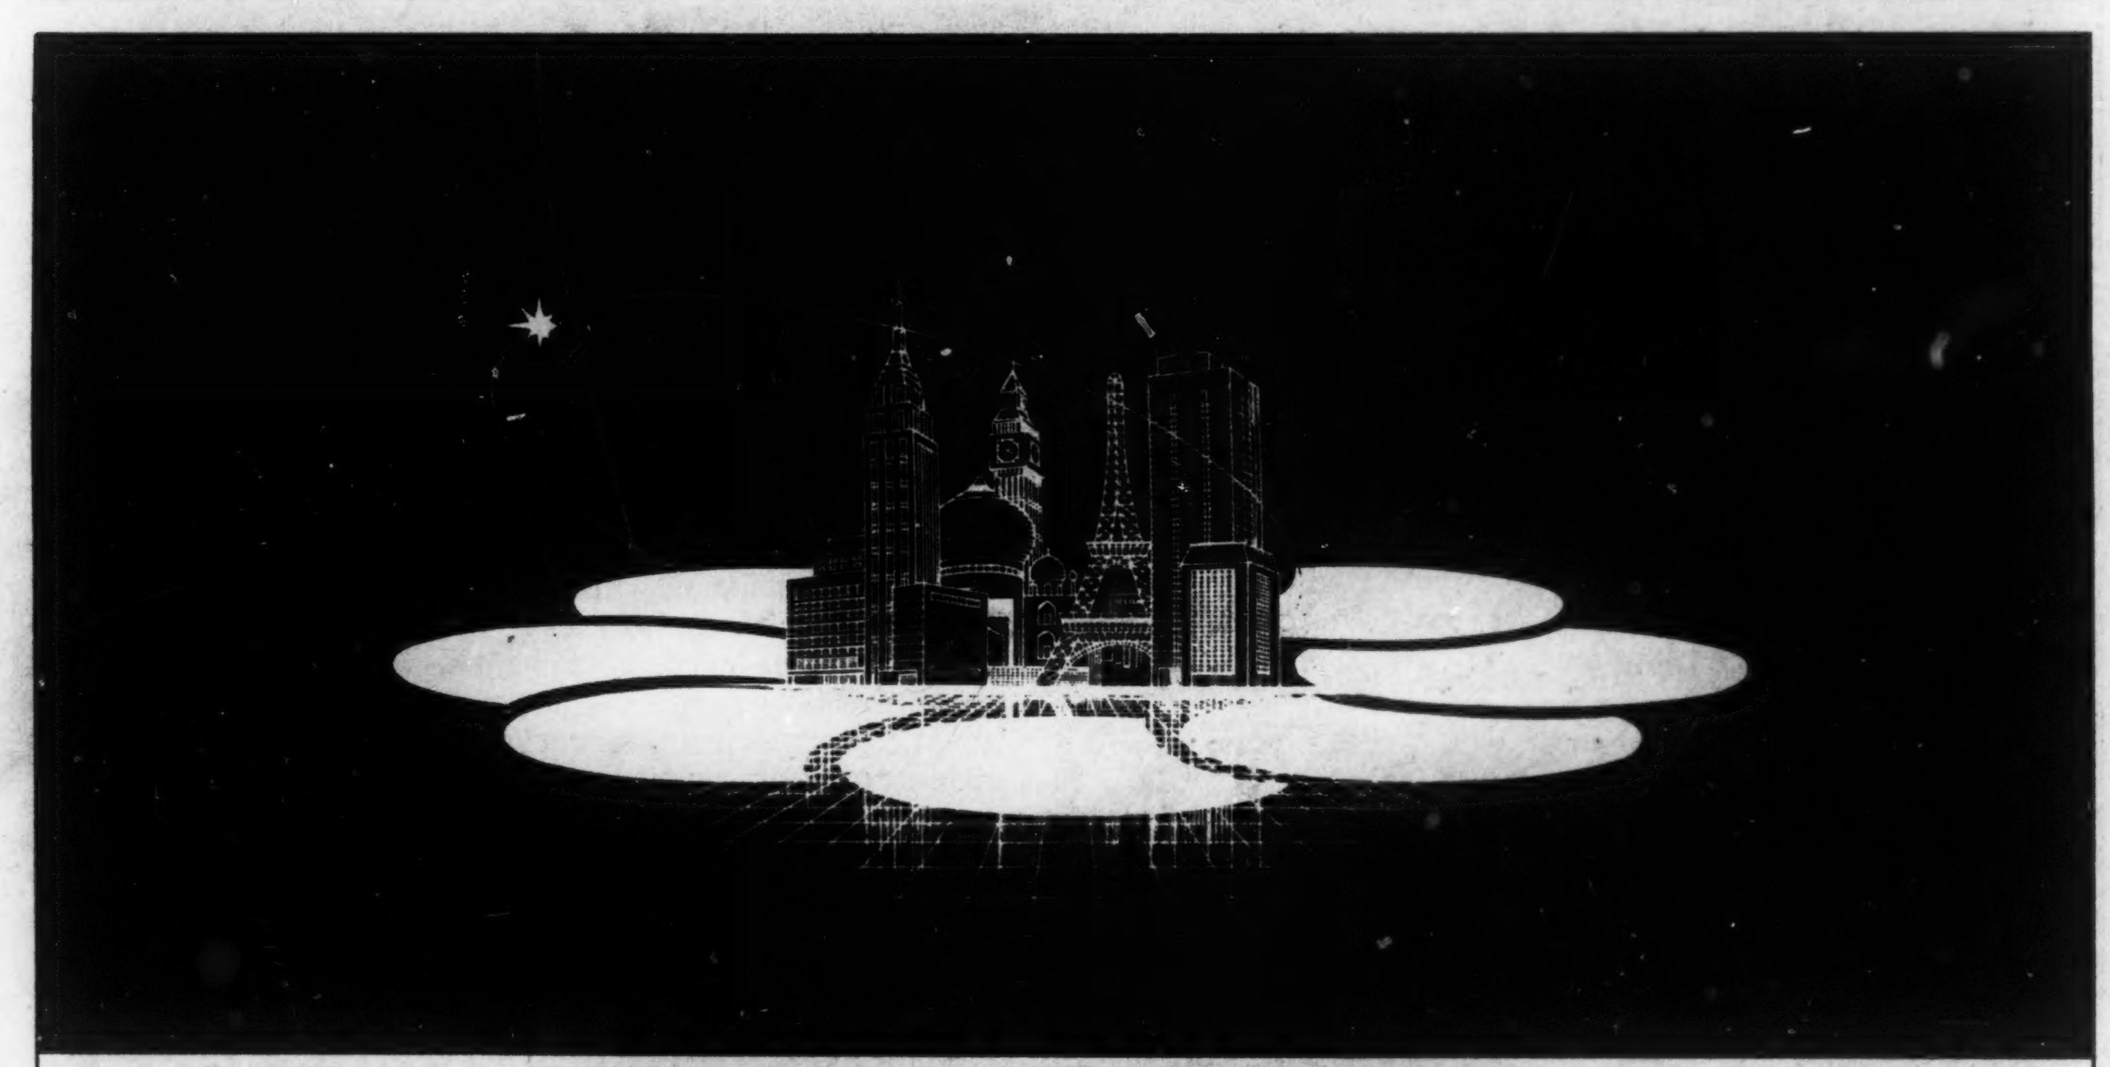
"It speeds up the system," Mr. Connelly says. "As you do things like that, we hope we're having a beneficial effect on the payment system."

To Mr. Penn at Fleet National Bank, such moves have given the Fed "significant savings," and thus motivated all the other check processing providers to improve service.

"If we can reduce the cost of that service, it benefits the customer as well as us," he says.

Denny Carreker, president of J.D. Carreker and Associates, a Dallas consulting firm, says that the most important issue in the debate is that the check processing market is a "very dynamic one," with rates changing frequently and small banks going back and forth between the Fed and commercial correspondents for the crucial service. The choice "depends entirely on their own needs," he stresses.

"They actually carried off something many people didn't think they would," Mr. Carreker says of the Fed's new sophistication. "In all, the industry and the country have benefited from this." ■



Saitama Bank.
A sound banking system matched to new banking needs.

Trade financing? Syndicated loans? International securities? In these and other areas of international banking Saitama Bank has established its capability and credibility worldwide. For over 40 years we've built our solid base and sound banking system in the Tokyo metropolitan area, Japan's vigorous economic center.

Saitama Bank is fast-growing and forward-looking: Change-oriented. Positive. And assertive — as seen in our electronic banking technology. Grow together with Saitama Bank — sound, experienced and flexible in matching its services to new banking needs.

How Banks Channel Payments Through Wholesale System

Economic and strategic implications from high-tech changes are shifting focus of competition among financial institutions.

The impact of technology on correspondent banking continues to carry economic and strategic implications, particularly on the way banks transfer services. The following is an excerpt on the wholesale payment system from "Technology and Banking: The Implications of Strategic Expenditures," a joint report by Salomon Brothers Inc. and McKinsey & Co.

THE WHOLESALE PAYMENTS system is the means by which corporations, financial institutions, and governmental units disburse and receive funds and obtain information about funds movement. The three major groups of services that banks provide in wholesale payments are funds transfer, transactional processing services, and customer interface.

Funds transfer services: Banks provide access to the major channels for funds movement. One conversion currently taking place, from paper check to automated clearinghouse "electronic check," has economic and strategic implications for financial institutions ranging from who should bear the costs of the new electronic systems to the impact of the loss of transaction float.

Transactional processing services: These services, often referred to as "cash management products," include lockbox, controlled disbursement, account reconcilement, and automatic investment. Many of them were originally designed to take advantage of inefficiencies in the paper-based payments system. Most of these systems will remain important, and investments in enhanced systems will continue because of the large volume of checks that will be written through the end of the century.

However, with the rate of increase in check writing diminishing and the applicable technology maturing, cash management processing systems no longer represent the cutting edge of competition: Banks are finding it difficult to differentiate themselves solely on the basis of a state-of-the-art processing system.

Customer interface services: Banks inform customers about funds movements (disbursements and collections) and account balances, and permit customers to initiate action based on the information. The interface has become increasingly electronic (and is in fact becoming known as the "electronic window") and is replacing transaction processing systems as the major focus of competition.

Wholesale Funds Transfers

The wholesale funds transfer system is the means by which payments between corporations, financial institutions, and governments are moved and monitored. The two major channels through which corporations direct their payments are the large payments channel, which operates mainly through electronic wire services to meet critical value dates, and the small payments channel, which is affected by paper checks and automated clearinghouse electronic checks.

Banks can direct corporate payments through three electronic funds settlement systems. These systems are used primarily for high-value transactions (average values are $2 million for Fed Wire and CHIPS) and offer a high level of security and (except for SWIFT) rapid settlement.

Fed Wire is a nationwide network operated by the Federal Reserve System through the reserve and clearing accounts held by the 8,000 depository financial institutions that access the network. Fed Wire transfers funds from one account to another on the books of the Federal Reserve. Settlement is immediate, and the transfers are irrevocable.

CHIPS, the Clearinghouse Interbank Payments System, is a private New York City-based network specializing in funds transfers and financial messages resulting from international trade and the foreign currency activities of its 120 member financial institutions. Settlement of net positions takes place at the Federal Reserve at the close of business on a same-day basis.

SWIFT, the Society for Worldwide Interbank Financial Telecommunication, is a bank-owned, transnational cooperative data processing and telecommunication system that conveys financial transaction instructions and other financial information between member banks in an automated and highly secure environment. Settlement is left to local or national networks such as CHIPS or Fed Wire in the United States.

In 1984, Fed Wire and CHIPS carried 87 million transactions — less than 1% of total wholesale transfers, but representing more than 85% of the total wholesale value.

The automation of internal processing began several years ago with electronic connection to the payment and message networks. This connection was followed by the automation of the transaction processing function, which eliminated much of the paper. The current advanced stage of development has been accompanied by a decline in prices, which has caused many participants to operate at or below their break-even points.

We believe that the necessity of continued investment in software and hardware, coupled with difficult economics, will cause all but the participants with significant market shares to either terminate their activities as direct service providers or incur increas-

Three important factors in selecting a data processing company.

Responsiveness
Averaging over 15 years of experience, M&I's account managers specialize in results. Dedicated to customer satisfaction, these banking veterans coordinate the talents of the entire M&I support team. Together our product support representatives, data communications analysts, and customer service specialists produce the high level of service to which you are entitled.

Technology
Flexibility is inherent to the design of M&I software. Its sophisticated database architecture and definable features allow you to tailor our products to meet your specific needs. Six of the 25 largest U.S. financial institutions utilize M&I's Integrated Banking System*. This same software runs in the service bureau environment and can deliver advanced technology to you.

Commitment
For more than 20 years, M&I has been supplying the financial industry with quality data processing services. Over 400 financial institutions nationwide with assets ranging from $3 million to $6 billion receive reliable data processing services from M&I. For more information, call Joe Delgadillo, Vice President/Financial Services Group at 1-800-558-7707 (in Wisconsin call 1-800-242-9225) extension 2329.

Thrifts Pare Down Use Of Upstream Relationships

As well as replacing service links for typical products, S&Ls are looking to correspondents to fill changing needs.

By Dorothy Hinchcliff

AS THE POTENTIAL TO save hundreds of thousands of dollars on correspondent services soars, thrifts — which some industry observers say account for one-third of the market — are turning more often to in-house departments to handle traditional roles, and looking to correspondents for more complicated capital market needs.

And though the thrift industry continues to represent thriving opportunities for commercial banks' correspondent sectors, several factors are changing the rules of the game.

Increasing competition from sources like the Federal Home Loan Bank is one. Many thrifts are now using FHLB to provide such traditional correspondent banking services as check clearing and other back-office processing, which they formerly sought from commercial banks.

In addition, as thrifts become larger, they tend to provide some services in-house that they previously farmed out to large correspondents.

"I don't think [the thrift business] is growing as fast as it has in the past. You now have the larger savings and loans that are more self-sufficient, that have installed their own computers and on-line systems," says Frances Guthrie, vice president of investment management for Central Bank of the South, Birmingham, Ala., which has correspondent banking relationships with more than 100 thrifts.

Moreover, the total number of thrift customers in the market has dropped, meaning that many banks have to work harder to develop new relationships and expand existing ones.

"I think that because of the diversity of businesses thrifts are in, the products we're able to offer has grown. But certainly the number of thrifts hasn't increased," says Barbara Z. Parker, vice president of the financial institutions group for Midlantic Corp., a bank holding company based in Edison, N.J. "I think our share in terms of additional products, not in terms of the number of thrifts, has grown."

Analysts agree that measuring just how much correspondent business banks are actually doing with thrifts is difficult.

Many believe monitoring compensating balances does not provide an accurate reflection of activity, because many consultant and investment banking services are charged on a fee basis.

"The balances are traditionally the yardstick — but an increasingly less reliable yardstick — given the growth of new products and the trend away from balances to fees," points out Merrill O. Burns, executive vice president of global financial institutions at Manufacturers Hanover Trust Co., New York, and chairman of financial institutions for the American Bankers Association.

The Kitchen's Getting Hot

Some banks are finding the business too tough.

In fact, says Mr. Burns, "All banks are paying increased attention to their profitability, and what we're all doing is concentrating on those products and market segment areas that afford higher than average returns. Logically, that's leading to some people exiting the business, others maintaining their businesses, and others growing."

David Voss, senior vice president of financial institutions for Union Bank, Los Angeles, agrees that the overall number of thrift customers is declining. To increase business, Union Bank has had to provide products of higher quality.

"We've stuck with it in hard times as well as good times," says Mr. Voss. "It's still a relationship business. Many customers can go to the Federal Reserve and the Federal Home Loan Bank for a cheaper amount. We are not the cheapest, but we give good, high-quality service."

Still, many bankers, including Mr. Burns, say their correspondent banking business with thrifts has been rising significantly. The thrift industry accounts for about one-third of the correspondent banking market today, Mr. Burns says.

Walt Gerstenberg, vice president of savings and loans for First Interest Bancorp, Los Angeles, says First's thrift business in California has grown 10% to 15% annually over the last few years. He adds that this rate is slightly faster than the rate of the bank's growth in correspondent banking overall.

Most of the new business opportunities from thrifts have developed primarily because they are now more diversified. Thrifts are looking to commercial banks to provide them with correspondent banking services — particularly in investment and merchant banking — that are more sophisticated than the ones they sought in the past.

While California Federal Savings and Loan Association, the fourth largest thrift in the nation, does its own check processing and other routine functions that smaller thrifts might turn to commercial banks for, it still needs a correspondent.

The services it does seek out are primarily on the credit side, says Thomas H. Dooley, senior vice president and treasurer of CalFed Inc., the thrift's

A million retailers a
But who do

Not surprisingly, the key to success in providing credit card verification is in being able to provide it without fail. If your network goes down, so do revenues, and wrong answers are worse than no answers at all.

AT&T comes through with complete networking solutions.

That's why we developed AT&T 800 Validator—an optional feature of AT&T 800 Service—that can handle millions of transactions a day, every day.

Each in less than fifteen seconds.

It's fast. It's accurate. And, above all, it's dependable.

AT&T 800 Validator makes it practical to check all credit transactions while providing improved card security. What's more, it requires minimal hardware and software investments.

And because AT&T is, undeniably, everywhere, you can provide immediate toll-free calling to the smallest retailer, in the smallest town, thus ensuring constant connections from Maine to California.

The Banking industry depends on accurate, dependable communications. And communications is what AT&T is all about.

If your business depended on reliable networking, how long would it take you to make your choice?

For more information, talk to your AT&T account executive. Or one of our sales representatives at 1 800 222-0400.

From equipment to networking, from computers to communications, AT&T is the right choice.

holding company.

California Federal has a $50 million revolving-term loan agreement with Manufacturers Hanover and First Interstate, as well as credit arrangements for $100 million with about a dozen foreign banks. The thrift also uses commercial banks as trustees on various mortgage-backed bond issues.

Another example of a thrift that has altered its correspondent banking activities from years past is Shadow Lawn Savings and Loan Association, based in West Long Branch, N.J. It now does check clearing in-house and outclearing of transit deposits through the Federal Reserve Bank, which a spokesperson says improves its availability of funds and reduces processing costs. Previously, it had used commercial banks to provide those services.

"There comes a point where the flow justifies bringing it in-house," says Stephen Graham, the chief financial officer of the $735-million asset institution. Mr. Graham estimates Shadow Lawn has saved close to $200,000 a year by handling some functions in-house.

> ***"Because of the diversity of businesses thrifts are in, the products we're able to offer has grown. But the number of thrifts hasn't increased."***

He says the thrift primarily uses correspondent banking services for security safekeeping, coin and currency purchases, and travelers check and ATM settlements.

Ms. Parker of Midlantic notes some of the newest products stem from meeting the needs of the growing number of S&Ls and savings banks, which have been converting from a mutual to a stock form of ownership. Products include lending to thrift employee stock ownership plans, becoming a trustee for ESOPs, acting as the thrift's stock transfer and registrar agent, and loaning funds to directors or senior officers of converting institutions for acquiring stock.

At Manufacturers Hanover, Mr. Burns says the amount of traditional correspondent business — such as fund transfers, securities safekeeping, and check clearing — has increased. But growth is occurring in investment and capital markets areas.

Retail and wholesale placement of certificates of deposit, commercial paper transactions, and interest rate risk management products are some of the new products, according to Mr. Burns.

Mr. Voss of Union Bank explains that larger thrifts in California have become more self-sufficient: They need less operational services and more capital market services.

In the age of increasing competition and diminishing customers, Mr. Voss says the bank "is trying to de-emphasize those [traditional services] and offer new products involving things like swaps, mortgage-backed securities, and Euro financing." ■

First DeWitt Bucks Norm

Expands Correspondent Relationships

Michael J. Quigley

Michael J. Quigley 3d could probably use the Federal Home Loan Bank instead of commercial banks for more of his savings and loan's correspondent banking needs.

But the 47-year-old chairman and chief executive officer of First DeWitt Savings & Loan Association, West Caldwell, N.J., explains: "I don't think you can put all your eggs in one basket."

Mr. Quigley says his bank would not want to provide all the correspondent services in-house *or* get them all from the Fed. In his eyes, commercial banks still have a lot to offer, with expertise in certain areas that smaller banks can not provide for themselves.

So when Mr. Quigley took over the top-ranking post at First DeWitt 18 months ago, he went against the norm and expanded the bank's correspondent relationship with commercial banks. Now the institution basically splits its correspondent business between the FHLB and Midlantic Corp., the Edison, N.J.-based holding company for Midlantic Banks Inc.

The 102-year-old First DeWitt has had a correspondent relationship with Midlantic for more than 25 years. But First DeWitt's business with the bank had been scaled back, Mr. Quigley says, by his predecessor, who followed many other companies that had transferred various services to the FHLB and away from commercial banks.

First DeWitt uses commercial banks to buy and sell Fed funds. Mr. Quigley says he has reestablished a line of credit with Midlantic. The bank also relies on Midlantic for wire transfers of funds, providing cash and coin in most of its branches, as a depository for some outlying branches, for letters of credit, and occasionally for messenger pick-up and as a securities custodian.

But its newest needs are using the bank as a lender for its employee stock ownership plan, which will be created when the thrift converts from a mutual to a stock form of ownership. The ESOP loan is at 85% of prime, says Mr. Quigley.

First DeWitt officers are also taking out loans through Midlantic's private banking services to buy stock in the offering.

First DeWitt, with $376 million in assets, pays for its services from the FHLB and Midlantic primarily by depositing compensating balances with them. Mr. Quigley estimates that First DeWitt keeps about $1 million or more on a daily basis with Midlantic.

As First DeWitt grows, Mr. Quigley thinks the institution will probably provide in-house some services that currently require correspondent bankers. "For example, we'll be looking at doing our own check encoding soon. The Fed and Midlantic do it for us now. We will probably do letters of credit ourselves eventually," he says.

Other banks have approached First DeWitt about becoming its primary correspondent bank. "I tell every one of those fellows that we've had a long and mutually rewarding relationship with Midlantic," says Mr. Quigley.

"None have sold me yet on changing."

Continued from Page 19

ing operating losses. Smaller providers may be able to participate as users of a larger bank's capabilities.

A by-product of the March 27, 1986, Federal Reserve Board directive that limits daylight overdrafts has been to enhance the position of better capitalized banks, because the size of the permitted overdrafts is proportional to a bank's capital. The Fed's action also increases demands on the information systems of the banks by requiring real-time knowledge of customer positions. Many banks do not have a system architecture that is capable of satisfying this demand automatically.

> ***"An electronic check would be an element of a more extensive automation of a company's internal processing, resulting in savings of $10 billion to $15 billion per year."***

It is not yet clear whether Fed action will further accelerate the concentration of activity among the large participants or limit the capacity of these participants and thereby slow the movement toward concentration.

We expect transactions over the wire system to continue to grow at a modest pace for the rest of the decade. SWIFT transaction volume has the potential to grow at a faster rate (perhaps even greater than its recent 20%-per-year pace) as a messaging network as it continues to develop useful formats other than funds transfer for interbank messages. In addition, the message standards utilized by SWIFT are increasingly incorporated into new funds transfer systems.

Acknowledging the steady decline in communication costs over the past few years, Manufacturers Hanover Corp. increasingly substitutes nonproprietary links where they are economically advantageous. GEONET — a proprietary internal data transmission network — utilizes a variety of components such as value-added switching networks, leased lines from RCA Corp. or American Telephone and Telegraph Co., satellite links, and microwaves.

The decision to build GEONET was not based on the needs of any one product. A single standard network was needed throughout the corporation, and a proprietary effort was necessary to minimize the cost of transmitting data. Project Connect is one method that the firm is pursuing to increase its usage of the global network. Specifically, Project Connect, a PC-based product, supports documentary credits and funds-transfer products.

Prompted by recent Fed actions, First Chicago Corp., Security Pacific Corp., Mellon Bank Corp., CoreStates Financial Corp., and First Wachovia Corp. are integrating and interfacing information from the large and small payment channels with other bank systems. CoreStates Financial has developed an intraday corporate funds management system that integrates wire transfer and collection. The funds transfer system integrates SWIFT, CHIPS, and Fed Wire messages. CoreStates Financial's ACH transaction volume more than doubled in 1985 and is expected to have doubled again in 1986.

Funds transfer has been one of Bankers Trust's most profitable products. The bank believes that the federal caps resulting from the March daylight overdraft regulations will hasten the eventual concentration of the industry. Some smaller competitors may not be able to comply with the federal regulations and will therefore exit the business. In fact, some foreign agencies have already begun to drop out.

There are clear economies in the business, although the increase in benefits obtained by each subsequent level of investment may be shrinking. Bankers Trust NY is actively wholesaling its service to other banks, thereby generating fee income and providing important additional volume.

Although Chemical NY is continuing to invest in BankLink — the most successful wholesale delivery system in the country — the company is also working to apply its experience to other market segments. Pronto Business Banker is being marketed toward smaller- and middle-market companies, which typically do not use mainframe computers. Chemical's strategy in this area is to generate a series of micro-based applications such as Prompt Pay (an ACH-access module) and ChemLink LC (a letter-of-credit initiation module).

Irving Bank Corp. has embraced a shared strategy for wholesale payments. As a result, Irving's employees are active in banking industry efforts to develop standards for many types of products. For example, in the 1970s, the company decided not to pursue a proprietary approach to international transfers and instead worked to ensure that the emerging SWIFT standards would be consistent. Irving has a 4% share in funds transfer and has a new state-of-the-art funds transfer system, FAST, which allows customer payment transactions to be processed electronically.

> ***"Banks are finding it difficult to differentiate themselves solely on the basis of a state-of-the-art processing system."***

Network Consultants, whose ownership passed in mid-1985 from the General Electric Information Services Co. to MCorp, has developed a module for its Money Net software (a popular wire-integrating package) that helps keep track of daylight exposure positions by focusing on Fed Wire activity. MTech, the direct parent of Network Consultants, is experimenting with the lease (as opposed to the sale) of wire transfer software. The lower price for leased software may allow banks with smaller volumes to upgrade their systems and to continue to offer economical wire transfer services.

Small Payments Channel

Paper and electronic checks dominate the small-payments channel. The wholesale paper-check system is similar to the retail system. The principal difference is that the issuer is an institution rather than an individual.

The electronic check system, a recent development in this channel, refers to payments through an automated clearinghouse (ACH). The ACH payment, which replaces the corporate paper check with an individual as the payee, is processed the same way as a retail ACH transaction.

The corporate-to-corporate payment — corporate trade payable (CTP) — through an ACH places different demands on both the ACH and the banks, reflecting the need to process large amounts of information along with the actual payment order. More than 500 million wholesale payments — representing 3% of wholesale check volume — are made via ACH. The remaining 17 billion paper checks are divided about equally between those to other wholesale parties and those to individuals (payroll, expenses, and dividends).

Wholesale check processing cost the industry $14 billion in 1984. In 1985, a typical check, which passed through 2.5 banking institutions, cost the banking system around 80 cents (including a portion of the cost of maintaining the branch system), while an ACH transaction costs less than 10 cents.

To many oberservers, paper check processing had advanced close to the physical limits of paper handling; the replacement technology of the electronic check is facing customer resistance on float, format, and security issues.

Yet the stakes in converting from paper to electronic check are high for both the bank and the wholesale customer. If only half of the wholesale checks were converted, the banking system would probably save $6 billion to $8 billion per year.

The benefit to the wholesale customer could be even more significant: An electronic check would be an element of a more extensive automation of a company's internal processing, resulting in savings of $10 billion to $15 billion per year. For example, it is estimated that the automobile industry alone could save $200 per automobile, or roughly $2 billion per year.

Electronic checks will probably not displace a significant percentage of paper checks over the next five years. More than 80% of the wholesale checks written each year is, according to estimates, issued by companies outside of the Fortune 1,000 industrial and the Fortune 500 service companies; providing access to the ACH in a format convenient to these middle-market companies (defined as a company with sales of $5 million to $150 million) is a necessary condition if the conversion is to be widespread. Standardization and marketing are key issues, because most of these smaller companies already utilize personal computers in their operations.

In addition to corporate-to-corporate payments, conversion is proceeding in two other major categories of small funds transfer — dividend and payroll payments. J.P. Morgan & Co. is particularly active in dividend payments and provides a zero balance account for them.

Other institutions, such as BankAmerica Corp., Valley National Corp., and First Wachovia Corp., are marketing direct-pay or direct-deposit payroll programs and have demonstrated a considerable potential for conversion, especially for middle-market companies. One of the inhibitors facing such programs is the reluctance of employees to agree to receive their pay in an account at a bank with which they do not normally do business.

Chase Manhattan Corp. and BankAmerica Corp. have announced the formation of private ACHs. The move was intended to enable them to negotiate better processing fees from the Federal Reserve or GEISCO and to influence National Automated Clearing House Association development more directly through representation on its board.

Chase Manhattan has also announced its intention to develop a service that will link networks in the United States with equivalent networks in Europe and Japan. The challenges of implementation include technical issues (conversion of the varied formats) and legal concerns (national restrictions on the transfer of data across borders).

First Wachovia Corp. is representative of a small group of banks that is increasing quality, while reducing processing costs by working with the regional Federal Reserve banks to improve the transmission process by using electronic, rather than tape, data transfer.

PNC Financial Corp has initiated a service that automatically strips the descriptive data from a corporate trade payable message and reformats the data into the standard lockbox format that the receiving company is able to receive electronically.

Payroll Plus, BankAmerica Corp.'s computerized payroll system, was expanded in 1985. Developed by a subsidiary, the system provides overnight processing for companies with 10 to 1,000 employees.

Northern Trust Co. and NBD Bancorp have announced plans to franchise ACH access systems that are applicable to middle-market companies to their correspondent or fellow network banks.

Transactions Services

In addition to the check processing system and the funds transfer system, wholesale payments require three transaction processing services: management of receivables, payables, and investments. These transaction services can be expensive to develop, install, and maintain. With the exception of image processing technology, little in the way of new technology will outdate the current systems.

Outlook

A distinguishing factor in the wholesale payments system — once effective networks are in place — will be the quality of transaction services. Certain systems, such as funds transfer, offer economies of scale that are leading to industry consolidation. Other systems, such as retail lockboxes, are local or regional.

In all cases, however, it is the quality of the processing system and, in particular, the appropriate use of technology that will distinguish banks, not the degree to which they use the latest technology.

Security Pacific's Service Level Agreement and First Chicago's Performance Measurement System are examples of successful quality insurance programs. Both programs provide meaningful and credible correlations between the quality of work and employee compensation. ■

> ***"Yet the stakes in converting from paper to electronic check are high for both the bank and the wholesale customer. If only half the wholesale checks were converted, the banking system would probably save $6 billion to $8 billion per year."***

Total correspondent balances are the sum of domestic correspondent balances and foreign correspondent balances. **Domestic correspondent balances** are domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other U.S. commercial banks in the U.S. **Foreign correspondent balances** are domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. **Time and savings deposits due to all banks** are nontransaction accounts due all domestic and foreign banks, as defined above. The sum of demand deposits due to all banks plus time and savings deposits due to all banks are called **total interbank deposits.** **(x)**— The data for 6/30/87 do not include the clearing balances of the bank's Edge bank subsidiary. Therefore, the 6/30/87 and 6/30/86 data for this bank are not comparable.

Top 300 Banks in Total Correspondent Balances

Ranked by Demand Deposits Due All Banks (Dollar Figures in Thousands)

Compiled by American Banker Copyright 1987

Total correspondent balances are the sum of domestic correspondent balances and foreign correspondent balances. **Domestic correspondent balances** are domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other U.S. commercial banks in the U.S. **Foreign correspondent balances** are domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. **Time and savings deposits due to all banks** are nontransaction accounts due all domestic and foreign banks, as defined above. The sum of **demand deposits due to all banks** plus time and savings deposits due to all banks are called **total interbank deposits.** **(x)**— The data for 6/30/87 do not include the clearing balances of the bank's Edge bank subsidiary. Therefore, the 6/30/87 and 6/30/86 data for this bank are not comparable.

Demand deposits due to foreign banks are foreign correspondent balances. **Foreign correspondent balances** are the sum of domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. **Time and savings deposits due to foreign banks** are nontransaction accounts due foreign banks, as defined above. **(e)**— Edge bank data for 6/30/85 were not available. **(x)**— The data for 6/30/87 do not include the clearing balances of the bank's Edge bank subsidiary. Therefore, the 6/30/87 and 6/30/86 data for this bank are not comparable.

Correspondent Bank Survey Sources and Definitions

The data for the *American Banker* survey of correspondent banking are taken from a questionnaire on information from the federal regulatory reports of condition, or "call reports," of June 30.

Specifically, the data requested were from schedule RC-E, Part 1, of the call report. This schedule asks for a breakdown of deposits for a bank and its domestic subsidiaries. In addition, banks with Edge banking subsidiaries were asked to report selected deposit data for their domestic Edge banking offices from Federal Reserve form FR2886b. That form is the Edge bank call report.

Total correspondent balances are the sum of domestic correspondent balances and foreign correspondent balances.

Domestic correspondent balances are the sum of domestically booked demand deposits due to other depository institutions in the United States, and domestically booked demand deposits due to other U.S. commercial banks in the United States.

Demand deposits due to other depository institutions are also called thrift correspondent balances. Thrift institutions are mutual and stock savings banks, building or savings and loan associations, homestead associations, cooperative banks, and credit unions.

Foreign correspondent balances are the sum of domestically booked demand deposits due other banks in foreign countries, domestically booked demand deposits due foreign government and official institutions, and clearing balances in the bank's domestic Edge bank subsidiaries.

Clearing balances are the sum of an Edge bank's transaction accounts due foreign government and official institutions, transaction accounts due commercial banks in the United States, and transaction accounts due banks in foreign countries.

Edge banks are international banking and financial vehicles through which U.S. banking organizations can offer international services and through which they may compete with similar foreign-owned institutions in the United States and abroad.

An Edge bank is limited by statute to engage only in activities in the United States that are "incidental" to international and foreign business. Many of the major correspondent banks that are headquartered outside New York use their Edge bank subsidiaries to provide correspondent services to their foreign respondent banks.

For banks failing to respond to the survey, call report data — provided by ADP Data Services Division New York — were used. However, Edge bank data for these banks were not available this year. (In previous years, Federal Reserve data were used for banks failing to report.)

The lack of Edge bank data had a sizable effect on the foreign correspondent balances and total correspondent balances of the following seven banks: Bank of America NT& SA, San Francisco; Bank of California NA, San Francisco; Continental Illinois National Bank & Trust Co., Chicago; Fidelity Bank NA, Philadelphia; First National Bank, Boston; Mellon Bank NA, Pittsburgh; and Security Pacific National Bank, Los Angeles.

Although fees are becoming increasingly important in the correspondent banking sector, the demand deposit figures still provide a gauge for measuring the scale of each bank's correspondent business. But, these balances are one-day figures that are subject to sizable daily volatility, and they can shift radically from quarter to quarter.

(x)—6/30/87 data excludes clearing balances of the Edge bank subsidiary.

Thrift Deposits at Commercial Banks Down by 9% from 1986

➻ Continued from Page 1

in this sector of the correspondent banking market.

These are some of the findings of the *American Banker's* 25th annual survey of correspondent banking published today. The tables begin on page 23.

The survey lists the top U.S. commercial banks in total correspondent balances, domestic correspondent balances, thrift correspondent balances, foreign correspondent balances, and total interbank balances.

Thrift correspondent balances — or demand deposits placed by thrifts at U.S. commercial banks — totaled $5.1 billion on June 30, and accounted for 11.1% of all correspondent balances held by banks. A year earlier, thrift correspondent balances were $5.6 billion, and accounted for 12% of the total.

These figures are for banks with $10 million in total correspondent balances. There were 394 such banks on June 30, and 378 banks a year earlier.

Need for Correspondent Services Soar

Although balances have declined, the thrifts' demand for basic correspondent services — as measured by the growth in checking deposits at thrifts — continued to soar. According to Federal Reserve Board data, checking deposits at thrifts rose 24.4% for the year that ended June 30, to $78.4 billion, after rising 30.1% during the comparable period in 1986.

Most of these checks are cleared by a thrift's correspondent. As the volume of checks at thrifts grows, bigger correspondent balances or higher fees are required to compensate the correspondent for its clearing services.

As previously mentioned, the main reason balances have declined — despite an increase in demand for correspondent services — is the rapid movement from balances to fees by thrifts.

A large correspondent bank in the Northeast stated that only 25% of its thrift customers now pay for their correspondent services by maintaining a specified balance. The remaining 75% maintain minimal balances and pay fees for the bulk of their correspondent services.

The movement to fees is attributable in part to the pressure regulators placed on the thrift industry to raise the capital-to-assets ratio, according to Jonathan Gray, a savings and loan analyst for Sanford C. Bernstein & Co., an investment management firm in New York.

One way to boost the ratio is to limit the growth of assets. "Compensating balances bloat a thrift's balance sheet," he said. "Fees — an expense item on the income statement — do not and are, therefore, preferable."

Limit Growth of Assets

Dennis Jacobe, a senior vice president and director of policy research at the U.S. League for Savings Institutions, Chicago, agrees that the tighter net worth requirements are the main reason for thrifts' preferences for fees. "In addition, liquidity is also a factor," he said. "A thrift does not want to place large deposits with its correspondent bank that cannot be pulled quickly."

Another factor in the deposit decline is the increase in competition banks face from the regional Federal Home Loan banks. For example, at the Federal Home Loan Bank of New York, over the 12-month period that ended June 30, the number of out-clearing checks (checks accepted by thrifts from their customers and deposited with a regional Federal Home Loan bank for clearing) totaled 32.8 million, up 15.5% from 28.4 million checks cleared over the comparable period a year earlier. And the number of New York and New Jersey institutions using the out-clearing service totaled 44 at midyear 1987, up from 39 users the year before.

At the Federal Home Loan Bank of San Francisco, the growth in out-clearing checks was substantially higher. The San Francisco bank cleared 44.5 million of these checks over the year that ended June 30, up from 32.8 million checks, or a 35.7% increase, cleared over the comparable period a year earlier. Currently 80 institutions in the San Francisco bank's region — which includes Arizona, California, and Nevada — use the out-clearing service.

Other Survey Findings

- There were 394 banks in the United States with total correspondent balances of $10 million or more on June 30. These deposits totaled $45.8 million, down 1.7% from $46.7 billion for 378 banks a year earlier.
- The 394 banks had domestic commercial bank correspondent balances of $31 billion, up 3.7% from $29.9 billion the year before. Domestic commercial bank balances accounted for 67.7% of total correspondent balances, at midyear 1987, compared with 64% a year earlier.

The gain in these balances is attributable in part to the decline in interest rates over the period. The bulk of domestic commercial bank correspondent services are paid for by compensating demand balances maintained by respondent banks with their correspondent bank.

A decline in interest rates lowers the value of these balances. Other things remaining equal, higher balances will be needed by respondents to pay for their correspondent services.

Correspondent banks generally use the 90-day Treasury bill rate to value correspondent balances. The average 90-day Treasury bill for the year that ended June 30 fell by 124 basis points from the year before.

- For the second year in a row, the top bank in total correspondent balances is the Chase Manhattan Bank, New York, with $2.86 billion in these deposits, down 14% from $3.33 billion a year earlier. Total correspondent balances include demand deposits due all banks — both domestic and foreign — and U.S. thrift institutions.
- In addition, Chase was the top bank in domestic correspondent balances. Chase had $1.69 billion in domestic correspondent balances, down 8% from $1.85 billion a year earlier, when it ranked second. Domestic correspondent balances are demand deposits due U.S. banks and thrifts.

Chase surpassed Manufacturers Hanover Trust Co., New York, in domestic correspondent balances. Manufacturers Hanover ranked second, with $1.31 billion, down 39% from $2.14 billion a year earlier.

- However, for the second year in a row, Manufacturers ranked as the top bank in thrift correspondent balances with $250 million on June 30, down 24% from $329 million a year earlier.
- Citibank, New York, is the top bank in foreign correspondent balances with $1.64 billion in these deposits on June 30, down 21% from $2.07 billion a year earlier. Foreign correspondent balances are demand deposits due foreign banks. ■

Limited Partnership

RS PARTNERS, 30 Rockefeller Plaza, NYC. Substance of Certificate of Limited Partnership filed in NY Co. Clks Office Nov. 6, 1987. Business: Acquire, develop, operate, hold and dispose of an interest in a partnership, corporation, joint venture or real estate investment trust; an interest in a mortgage, bond, or other evidence of indebtedness; an interest in land, buildings or other real property. General Partner (GP): L.G. Schafran & Partners, L.P., 30 Rockefeller Plz., NYC. Limited Partner (LP) & Contribution: The Rockefeller Foundation, 1133 Avenue of Americas, NYC, $20,000,000. Term: Until Dec. 31, 1997 unless sooner terminated upon the following: (a) LP and GP consent thereto in writing; (b) disposition of all property; (c) death, dissolution, voluntary retirement or adjudication of incompetency of GP unless LP continues business; (d) L.G. Schafran, individually, ceases to be general partner of GP and LP elects to dissolve; or (e) if GP (i) adjudicated bankrupt, (ii) has receiver appointed and appointment remains in effect 30 days, (iii) makes assigment for benefit of creditors, (iv) files petition in bankruptcy or for arrangement with creditors, or (v) admits by pleading the material allegations of bankruptcy petition or similar pleading filed against it, unless LP continues business. No additional contributions agreed to be made. No time agreed upon for the return of contributions. The share of the net profits and other compensation by way of income which LP shall receive is equal to (i) interest and other yields earned on bank deposits or investments in short-term obligations to extent such deposits and investments made with funds contributed by LP which have not been otherwise invested at any time, and (ii) a percentage of net profits from each investment determined by annual rate of return upon the investment. To extent that annual return is 9% or less, LP percentage of net profits is 99%; to extent that return is more than 9% but less than 13%, LP percentage thereof is 79%; to extent that return is more than 13% but less than 20%, LP percentage thereof is 69%; and to extent return is more than 20%, LP percentage thereof is 59%. LP cannot substitute an assignee as contributor in its place. Additional LPs may be admitted only with consent of all partners. No priority among LPs. Upon the death, voluntary retirement, adjudication of bankruptcy or insanity of a GP, LP may continue the business and designate a substitute GP. LP may not demand or receive property other than cash for his contribution.

Shareholders Approve United Jersey Merger

PRINCETON, N.J. — Shareholders of United Jersey Banks and First Valley Corp., Bethlehem, Pa., have approved the merger of the two companies.

Under the agreement, each share of First Valley common stock will exchange for 1.45 shares of United Jersey Banks common stock. The merger is expected to be completed during the first quarter of 1988 after required regulatory approvals are received.

With this acquisition, United Jersey will have over $9.7 billion in assets with nearly 250 offices in 22 counties in New Jersey and Pennsylvania. ■

Machine Banking Review

Leading analysts, including 16-year veteran Linda Fenner Zimmer, investigate whether the ATM market is past its prime or poised for expansion. Bank management appears to have lost its patience waiting for the illusive ATM payoff, letting networks take the leading role. A special pullout section examines these issues and provides ATM statistics at the top 300 banks. Starts **page 13.**

BankAmerica, Citicorp Own The Most ATMs

Large Banks Report 21% Of Machines Are Off Site

By JAY ROSENSTEIN

BankAmerica Corp. owns more automated teller machines than any other banking firm in the United States, according to an *American Banker* survey.

The San Francisco-based company said it owns 1,350 ATMs, followed by Citicorp, with 1,200 ATMs. Closely trailing the New York company is Wells Fargo & Co., San Francisco, with 1,195 ATMs.

In the survey of the nation's largest bank holding companies and independent banks, firms were asked to report the number and location of their ATMs at midyear. The information represents only the companies' ATMs and not the machines of other banks in a shared network.

Some big institutions, including Chase Manhattan Corp., the nation's second largest bank holding company, did not respond to the request in time, making it difficult to provide a complete picture of ATM ownership by

Random Thoughts

By SANFORD ROSE

In an address to the Bank Administration Institute in mid-November, Jon Moynihan, managing vice president of the First Manhattan Consulting Group, offered the following rather negative assessment of the current state of interest rate risk policy in most major banks. Argues Mr. Moynihan: Although in published remarks the typical bank professes that it takes little or no interest rate risk, in point of fact it actually takes a fair amount. What's more, its rate bets are generally based on gap reports, which are seriously flawed.

Inside the buckets of a gap report there are large, though apparently unrecognized, differences in repricing characteristics. This is particularly true of the longer-maturity assets and liabilities, but it is also true even inside the shorter buckets.

A bank may reprice more assets than liabilities in a particular short-term time period but still may be liability not asset sensitive if the bulk of the liabilities reprice at the beginning of the period while the bulk of the assets reprice at the end of the period.

RANDOM THOUGHTS

➜ Continued from Page 1

Thus a rise in rates can produce a decline not an increase in net interest earnings derived from the footings contained in the particular bucket. In other words, gap buckets are generally too broadly defined to assess the likely impact of rate changes. This criticism, considered rather tiresome by some AL practitioners, is still applicable to many banks, insists Mr. Moynihan.

The First Manhattan executive reports that most banks have no adequate reports of the impact of existing rate bets on income as well as no reports of the impact of past rate bets. Intermittently, he adds, a top executive of the bank will decide to shorten or lengthen the portfolio in anticipation of rate changes. After that has been done, there is very incomplete follow-up or feedback on the outcome of these adjustments.

If a particular rate bet is obviously successful, there is much applause. If it is obviously unsuccessful, the result is buried. Successful bets encourage more aleatory activity; unsuccessful bets encourage conservatism and limitations on future betting.

Overall, those very unsatisfactory gap positions tend to oscillate on an almost random basis from positive to negative to balanced. In part because of job turnover, a consistent policy is never adopted, and lessons are not learned from past mistakes.

What should banks do? Mr. Moynihan offers the following prescriptions: If banks must bet, which he does not necessarily advocate, they should do a far better job of measuring the overall impact of both current and past interest rate gambles on net interest earnings. They must also measure their impact on the overall value of the bank — that is, the discounted value of all future net-interest-earnings outcomes.

They should use the measurement system to remove the influence of rate bets from the financial statements of the individual business units. And they must use the measurement system to assign and track accountability for all maturity or duration mismatch decisions and their results. Interest rate risk management must be set up as a separate business within the bank with its own income statement.

To fill many of these prescriptions, banks need to understand duration, characterized by Mr. Moynihan as the "theoretically correct but fiercely disliked approach to asset-liability management."

□ □ □

Speaking at the recently held American Banker conference on cost control, Rick Spitler, a Booz Allen vice president, pointed out that the number and dollar amount of mergers and acquisitions in banking were higher than in any other industry from 1982 through 1986. In the past five years, some 5% of total bank capital has been reallocated. Adding in the portion of current capital that is due to the retained earnings generated from the reallocated capital, one can argue that the percent of current bank capital affected by the consolidation craze totals about 10%.

Not only is merger activity greater in banking than in other industries, the percent premium over market price is also larger. That premium averaged around 50% and has ranged from a low of about 30% to a high of 60% over the 1982-86 period. By contrast, the acquisition premium for all industries has been somewhat more modest, closer to 40%.

In some senses, the high acquisition premiums reflect an unintended interest rate bet, analogous to a large negative gap. Banks began buying other banks' earnings rather expensively in the early '80s. Then rates started to tumble, raising the present value of future earnings and justifying, in retrospect, the inflated prices. To a considerable extent, the fall in rates bailed out bad decisions and emboldened other acquirers to continue paying exorbitant prices.

Since it is unlikely that rates will continue dropping, potential acquirers must do more careful arithmetic in the future. Let us exclude the top 20 money-making banks and consider the average bank among the next 40 largest institutions. It had a market-to-book ratio of 1.3 times and a return on equity of 13.6% as of the end of 1986.

Assuming no immediate payback of capital from the acquisition, the acquirer of such an average bank that pays a 50% premium will have to raise its target's return on equity from 13.6% to about 18.7% in order to break even — that is, maintain the market value of the investment and avoid impoverishing its shareholders. Otherwise put, if one buys a large bank for two times book, one must add around 5 percentage points of return to restore the status quo ante.

Expressed in terms of cash flows, the acquirer will have to raise the acquiree's earnings by 75% in order to make back the premium. That 75% earnings increment translates into either a 25% reduction in expenses or a 19% to 20% increase in revenues — a truly remarkable challenge, adds Mr. Spitler.

□ □ □

It is a challenge that can be met in essentially three ways — by lowering the cost of capital and/or effecting capital economies, by augmenting revenue, or by trimming costs. Required capital can be reduced if the merger results in both an enlargement of the loan pool and a decline in borrower covariances, justifying a lower ratio of loss reserves to outstandings.

Improvements in diversification, resulting in part from larger size, may also lead to a better credit rating and ultimately a higher market valuation, cutting the cost of both equity and debt capital. Additionally, a merger may increase the efficiency of capital utilization by allowing its redeployment to higher growth markets.

Revenue gains can be achieved in the short run by raising prices and improving risk management. A good example of an acquirer who seeks and generally achieves an immediate gain in revenue is Banc One of Ohio. It boosts the loan yield of acquired institutions by selling them credit card receivables and by encouraging them to shift from commercial and industrial loans to consumer paper in general, since these yields are usually much more attractive. It also pushes new affiliates to hike service prices, often by more than they think possible.

Longer-term revenue gains can be made if, by becoming larger, an organization can focus more resources on specific businesses and increase its market share and strength sufficiently to command higher prices.

Near-term cost reductions are available from a variety of functions, depending on economies of scale. More importantly, during the course of a merger, an organization has the opportunity for fundamentally rethinking and restructuring not merely the back office, but also the complete branch and distribution systems.

□ □ □

The gains available from merger depend on its type. Booz Allen finds two relationships essential to understanding the potential impact of a merger. The first is the relative size of the institutions. The more equal in size the two partners, the more likely each is to have individual superiorities that should be preserved in a merger. Unfortunately, mergers among equals are also the most difficult to consummate.

The second relationship is the degree of market overlap. In regional banking, this translates into the extent of overlap in the same geographic area.

An intrastate merger of equals provides the greatest opportunity to realize cost savings. Consider the typical cost structure of a retail bank. Some 37% of the costs are in the branches, 18% in operations, 13% in general and administrative expense, 12% in systems, and 20% in miscellaneous.

In large intrastate mergers where there is considerable branch overlap, branch rationalization, by itself, says Mr. Spitler, can provide most of the savings needed to earn back the acquisition premium. He notes: "In terms of total percent of acquired bank expense available, the maximum cost savings could be as high as 30% to 40%, assuming that the operations and branches of the acquired institution are folded completely into those of the acquiring bank."

The 30% to 40% figure presupposes that all the costs of the acquired bank are scale sensitive. Since they typically are not, more realistic estimates of the maximum savings available in an intrastate marriage amount to about 15% to 20%.

In interstate mergers, however, which are now the most numerous, the potential cost savings fall off dramatically. In these types of mergers, the opportunities for branch consolidation are minimal. And since much of the operations costs are driven by the branches, economies in this area are also limited.

As a result, the cost savings from interstate or remote mergers are essentially confined to rationalization of systems. But systems expense, as noted, accounts for the smallest share of retail bank costs.

Much of the confusion about the gains from merger stems, suggests Mr. Spitler, from the recent switch in emphasis from intrastate to interstate consolidations. If a bank embarks on an interstate merger with a model of post-merger behavior derived from the experiences of intrastate combinations, it is likely to be disappointed in the merger results.

Ability to earn back the hefty acquisition premium depends, in the case of an interstate merger, less on cost savings than on a viable plan for significant revenue enhancements and capital economies. ■

HOW MUCH IS TOO MUCH?

A leading analyst investigates whether the ATM market has reached its saturation point or is poised for growth in nontraditional ways and less predictable territories.

By Linda Fenner Zimmer

THE AUTOMATED TELLER MACHINE industry has been on hold for the past few years as financial institutions come to grips with their environment — a world filled with deregulation, competition, mergers and acquisitions, and diminishing profits.

With few exceptions, any ATM progress in 1987 takes place at the networks rather than at individual banks, indicating that perhaps responsibility, direction, and planning have gradually shifted. Indeed, this change has occurred in the last several years, as the industry has shifted from a proprietary ATM structure to that of shared networks.

Areas ranging from management's commitment to growth, responsibility for maintenance, profitability and machine shipments have been affected by this restructuring.

With bank and network consolidations well underway and management's growing impatience regarding the allusive long-term payoffs from ATMs, a decline in machine shipments was fully expected. Indeed, there has been a downward trend in domestic shipments for several years. But it appears that the drop in annual shipments may well have bottomed out.

Projected shipments for 1987 are 9,000 units, an increase of almost 1,000 machines from the prior year, according to industry research. It seems that this developing upward shipment trend will continue for at least several more years. If 1987 ATM shipment projections are met, the net installed base by year end will be in the range of 75,460.

During the first quarter of this year, all domestic manufacturers were polled. They gave their evaluations of the present and past markets, as well as their views of next year's market. The responses indicate an increasing optimism for ATM shipment increases.

It remains to be seen whether or not shipments will match this optimistic forecast for 1988, but it would appear that 1987 projections are right on target. And certainly the machine replacement market is expected to play a major role in increased machine orders and shipments both this year and for several years hence. In 1986, 28% of all machine shipments were already replacement machines.

Market Saturation Theories

The average ATM handles between 5,000 and 5,500 transactions per month, excluding balance inquiries. Like ATM shipments, average machine volume may have bottomed out after having fallen over a five-year period from a 1982 high of 7,200 transactions per month.

Several industry observers suggest that the sharp and steady decline in transaction volumes could be attributed to market saturation.

Rather than saturation, the transaction volume decline could also easily be attributed to the growth and popularity of shared networks. Between 1982 and 1985, network growth resulted in a surge in ATM installations without a parallel marketing effort. As a result, ATM transaction volumes per machine were depressed.

If the individual ATM institutions and networks fail to provide the necessary promotional and customer-

Continued from Previous Page

education efforts and are satisfied with the current level of ATM transaction volumes and customer acceptance, then the ATM market is saturated.

However, if the industry commits itself to marketing and customer education, some analysts believe there is more than enough room for growth.

Ain't Seen Nothing Yet

In many respects, ATMs are like icebergs — we've only seen the tip so far.

The vast potential for ATMs to handle the bulk of routine financial transactions has barely been tapped. This is especially evident when one considers that only 33% of card-carrying customers actively use ATMs, with active defined as at least one use per month.

This 33% figure is often referred to as the 33% wall, since a number of institutions are unable to increase their percentage of users above that level.

Some intense market research might prove most revealing in explaining why the wall exists and how an ATM institution might be able to hurdle it. Such research carries even more importance if ATMs are laying the foundation for the world of self-service banking.

An institution's game plan and strategies emanate from top management. Yet electronic banking and ATMs, with few exceptions, do not rank very high on the priority list in the executive suite — if at all.

There are a handful of exceptions to this. Shawmut Bank of Boston and Dollar Dry Dock Savings Bank in New York City are in the process of restructuring their retail banking organizations and service delivery structures, with ATMs and platform automation playing key roles.

More than 25 years ago when the cashless society was catching the industry's fancy and attention, senior management was the one leading the parade. That involvement and commitment continued well on through the early 1980s.

Today that support, commitment, and, most importantly, direction are missing. If the financial industry plans to charge ahead in electronic banking and develop its full potential, analysts point out that senior management must once again become involved and provide the missing leadership and support. If not, the power will be abdicated to the networks, which is already happening at many institutions.

One way to recapture the enthusiasm and interest and, ultimately, the support of the senior echelons is through positive bottom line impact — by actually accomplishing some of the objectives for which ATMs were installed in the first place.

Waiting for the Payoff

In general, top management has lost its patience waiting for the allusive payoffs long promised from ATMs. In the early days of cash dispensers and automated tellers, the comment was frequently made that "we know ATMs are expensive, but the payoff is long term, not short term. We're in this for the long run."

That was how many years ago? How many models ago? How many dollars ago? And yet just about every ATM owner today is still searching for ATM profitability.

With an emphasis on capital preservation, survival, and positioning, 1987 brought with it a strong top management interest in the cost effectiveness and profitability potential of all aspects of banking, including ATMs.

And these same eyes are also watching the ATM networks. Buyers of the network services as well as the networks themselves are asking exactly what role the networks should take in the restructured market, and whether it has done its job and fulfilled its expectations.

Senior management's perception of ATMs is undoubtedly being carried over to point of sale. In many respects, POS has encountered rough waters because of lack of support and commitment from senior management.

Many look at the funds already put into ATMs and wonder just what the industry and the individual institutions have received in return for that investment. With little to show so far from ATMs, institution are often reluctant to plunge into POS.

New Sources of Income

With low ATM transaction volumes and high costs plaguing many institutions, a number of organizations are experimenting with revenue-generating services that might be added to their ATMs. Services being piloted include the disbursement of welfare checks and cents-off coupons, as well as the dispensing of airline, ski-lift, and theater tickets. Although generating some revenue for the ATM-owning institution and/or network, these services pose serious questions.

One really has to question what business the institution and networks are in and what business they want to be in.

And perhaps such questions have totally different answers, depending upon who's responding — networks, financial institutions, or third parties.

In many respects, the ATM industry in the United States could pick up some pointers and ideas from its counterparts around the world. Japan is a case in point.

The largest bank in Japan, Dai-Ichi Kangyo Bank, is currently involved in a project wherein its ATMs are being equipped to read smart cards, which are ordinary plastic transactions cards imbedded with computer memory chips. Each time a customer uses the smart card, its cash value is updated for later off-line use at retail stores.

In another project, Dai-Ichi Kangyo Bank is investigating the feasibility of equipping its machines with OCR (optical character recognition) readers in an attempt to totally automate the bill payment process. Deposits, cash, and bill payment invoices would all be machine-readable. The objective is to transfer the normal bill paying service from the teller window to the ATM.

Rather than try to add more options to ATMs, it may well be time to start expanding the self-service banking concept and begin developing a family of complementary and modular terminals. A combination of both approaches is in order.

In a survey conducted last year among 63 ATM pioneers, over half indicated plans for including additional service options on their ATMs, including:

Interim statements	74%
Money market rates	44%
Ticket dispensing	24%
Stock quotes	3%

In the same survey, the pioneers were asked to indicate what terminals they would include in an automated branch if given the chance:

Cash dispensers	93%
Balance inquiry	93%
Touch screen information	90%
Statement printer	88%
Interactive terminals	
Personal loans	67%
Mortgage application	59%
Coin dispensers	33%
Postage meters	26%

All of these services and terminals are only a hint of what the industry can expect in the 1990s.

Fewer Making the Commitment

But whether or not these services become a reality depends upon what the industry does today and whether or not it tackles the ATM iceberg or lets it drift away.

In the past, industry observers and participants agreed that there were certain mandatory steps for any ATM program if it were to be successful: written objectives and strategies combined with quantifiable goals and data feedback systems; top management support and commitment; continuous (or at least periodic) promotions and customer-education efforts; highly reliable equipment; and a secure ATM environment.

These factors are just as important today, if not more so, regardless of whether one is involved with a proprietary or shared ATM program. Yet fewer institutions than ever are fully committed to their programs.

In many respects, the future of ATM products and services, and the EFT services expected to grow from the ATM experience, is directly correlated with the results of the industry's continuing search for profitability, performance, productivity, and proper positioning.

Note also that the consumer really does not "care" about technology and all the bells and whistles. What the consumer wants is the desired financial services offered in an efficient, reliable, high-quality manner at a fair price.

Technology is not the problem. Rather, the industry is stumbling on how it prices, positions, and presents the chosen technologies to the consumer.

Because of the foundation and education built up by ATMs, the evolution toward electronic banking is expected to accelerate: Customer understanding and acceptance of POS transactions, home banking, and comparable developments will mature much faster than ATMs are growing.

But the question remains as to whether or not the financial industry is up to the challenge of finishing the job it started with ATMs. If not, progress toward electronic banking may well be slowed indefinitely on the retail side.■

Continued from Previous Page

says use of the machines in Japan is "probably more sophisticated" than in the United States. But Mr. Browning predicts Americans will become more fond of electronic banking.

"Our figures show that in the United States, about 40% of consumers with checking accounts use ATMs," says Mr. Browning, who is also president and chief executive officer of Colorado National Bank, Denver.

"We have made great strides in this country in the last five years and the next five will be just as dramatic," he says. "With time and education, the consumer will become more comfortable with the ATM. But I don't think usage in the United States will parallel that in Japan."

Roots Planted in 1960

ATM use began in Japan in 1960, Mr. Yajima says, when Sumitomo Bank Ltd. installed the first Omron-built device at a branch in Kyoto. Over the next dozen years, growth was gradual.

But in 1972, the industry adopted a standard format for the machines and cards with magnetic strips, which aided growth by enabling consumers to use machines provided by different banks.

The big push came in the mid-1970s, Mr. Morache says, when Fujitsu developed the "zengin," or superswitch. The superswitch allowed ATM networks and bank branches to be processed on-line in real time.

Some 900,000 transactions throughout the country are processed every hour through mainframe computers operated by Nippon Telephone & Telegraph, Japan's phone company. Riding on high-speed phone lines, information from one branch or ATM location is available immediately throughout the banking system.

That means a worker who wants to obtain cash or make a deposit could go to virtually any ATM in the country and complete the transaction immediately. Consumers do not have to wait overnight for some items to be posted, Mr. Morache says, as they do in the United States.

Despite continuing advances in ATM technology and the ability of the machines to perform a wide range of services, experts say the Japanese market is maturing and is unlikely to be a growth area for machine sales.

But the market could improve dramatically, Mr. Yajima says, if Japan's government repeals a restriction barring off-premises ATMs — machines installed at supermarkets, gas stations, and other retail similar locations.

Some banks in Japan are experimenting with point-of-sale machines at some department stores in anticipation that restrictions will be relaxed, Mr. Yajima says.

At this point, however, the Japanese ATM market is "like the U.S., mostly a replacement market," according to Mr. Morache. "We are projecting growth of around 5% to 10% a year." ■

> ***"It is easier to carry cash [in Japan]. Companies deposit salaries directly to an employee's bank account. What happens on payday is the workers withdraw their salaries from the cash dispenser."***

MACHINE BANKING REVIEW

Europeans Plan Network That Will Span Continent

Foreign banks are hostile to U.S. credit card dominance, but most recognize the need for international standards.

By Linda K.S. Moore

Paris

BY 1990, MOST EUROPEans with bank accounts will be able to get cash from an automated teller machine in any of the 17 countries represented on the European Council for Payment Systems.

In October, the 40 major European banks that make up the council announced an accord to honor each other's Visa, MasterCard, and Eurocheque cards at their teller windows, in cash dispensers, and at the point of sale.

The accord is one of several steps being taken to establish a European ATM network comparable in scope, if not in size, to the shared U.S. networks.

The agreement will cover roughly 100 million customers out of an estimated 150 million bank cardholders in the European Economic Community, Switzerland, Austria, and Scandinavia. It may eventually be extended to include proprietary debit cards.

With approximately 35,000 ATMs installed, Europe has roughly half the number of machines the United States has. But these ATMs serve a combined population that is 50% greater than the States.

By 1990, the number of ATMs is estimated to increase to 50,000.

Despite some eye-catching futuristic branch installations, two-thirds of ATMs in Europe are through-the-wall. Fewer than 10% are off-site, according to London-based Battelle Banking Research Group, which tracks ATM developments in Europe.

Most Shared Nationally

Banks sharing cash-dispensing functions of ATMs within a country is the norm. But for close to a decade European banks have been seeking to establish a pan-European ATM network that would not be dominated by the American giants Visa and MasterCard. (MasterCard is distributed in England as Access and on the Continent as Eurocard. The Eurocard is different than the Eurocheque card, which is issued by a separate organization.)

In response, Visa and MasterCard gave more power to their European partners. But despite the relative autonomy of the European operations, the perception that the Americans control the international bank card game has not diminished. European bankers tend to prefer having their own network and many have supported a European standard for bank cards in the past.

The council's accord recognizes the need for international standards, and bows to Visa and MasterCard, as they already operate in an international environment.

And though calls for an only-European standard for bank cards have been on the wane, the desire remains strong to construct independent ATM networks serving Europe, operating much as Plus and Cirrus have in the United States.

These networks would be formed by reciprocal agreements among national shared networks rather than among banks. The Italian and French ATM networks, for example, are negotiating an agreement that would open at least some of their machines to each other's cardholders.

In France, universal sharing has been in effect for two years. All ATM and POS locations accept the Carte Bancaire, the product of the merger of the "Carte Bleue" (Visa) and "Carte Verte" (Eurocard) networks.

In Italy, the Societa Interbancaria d'Automazione, under charter from the Bank of Italy, runs the ATM and POS networks for all Italian financial service institutions. The Bank of Italy ruled in mid-1984 that all through-the-wall ATM installations must be shared, a move that was encouraged by the commercial bankers who thought that the savings banks were pulling too far ahead in automating retail services.

In West Germany, the savings banks are a considerable distance ahead in the electronic delivery of retail banking services. In fact, two-thirds of ATMs in the German shared network are owned by savings banks.

ATM Use in Europe

	No. of ATMs	Transactions Per Month
U.K.	10,800	6,040
France	9,600	4,318
Italy	4,300	1,059
Germany	3,400	4,090
Sweden	1,400	8,238
Belgium	700	7,968

Source: Bettelle Institute, Banking Research Group, London

They are also dominant in the issue of Eurocheque cards. The Eurocheque card is an ID card that is used to cash Eurocheques, a form of bank-guaranteed checks that is accepted throughout Europe, similar to a travelers check. Eurocheques is the predominant form of payment at merchant locations in West Germany.

Since 1984, the Eurocheque card has had a magnetic strip that makes it usable in ATMs. By yearend, 7,500 machines in Spain, Portugal, Denmark, Belgium, West Germany, and Great Britain will accept any of the 30 million Eurocheque cards for cash withdrawals.

The first ATMs to accept the Eurocheque card were in Spain, where three networks control the country's ATM and POS activity. These are Sistema 4-B, dominated by commercial banks; Servired, which is open to all types of financial services institutions; and Ceca, a savings bank network.

Spain welcomed [illegible] million tourists in 1986 — more than their population — and the country's bankers are vocal proponents of international sharing. ATMs have helped Spanish banks deal with seasonal demands for cash in resort areas; and they have also been installed by foreign banks catering to their clients on holiday. Barclays Bank and Citibank have been the most aggressive in installing automated facilities in areas such as the Costa Brava.

In Great Britain, Barclays is part of the largest shared network in the country. Along with Lloyds Bank, the Royal Bank of Scotland, and the Bank of Scotland, Barclays has placed 4,000 ATMs at the disposal of its customers.

The other major networks are the combined ServiceTill and AutoBank machines shared by National Westminster Bank and Midland Bank; the Trustee Savings Bank network, which will begin sharing with NatWest and Midland next year; Matrix, limited to building societies; and LINK, which includes American Express in its consortium.

Among those working out shared arrangements in Great Britain is the American network Plus, which hopes to gain access to 2,000 terminals.

Economics of Interchange Fees

Commenting on the number of reciprocal sharing agreements in the United Kingdom, Seymore Fortescue, head of U.K. retail banking activity for Barclays, notes that automated cash withdrawals have become a utility-type service. "We've seen the situation go from 'protecting one's turf' — as the Americans call it — to a situation where virtually any financial institution in the U.K. can have access to a shared network, and provide its customers with access to cash on a nationwide basis," comments Mr. Fortescue.

"Rather than being standoffish and saying we're going to keep these machines for our own customers," he adds, "it seems to me more sensible to open them to other people, particularly when you get reciprocal advantages and can try to make some money out of it."

In France, where the interchange fee is about 85 cents, most bankers feel that they are losing money on their ATMs. The interbank agreement forbids charging the customer for a Carte Bancaire transaction.

"Only the banks with really large ATM networks, the Credit Agricole and the post office banks, can hope to make money in this situation," observes Rene Houssais, head of retail bank marketing for the Banque Nationale de Paris. In feverish competition for interchange income, most French banks are planning to increase the number of through-the-wall cash dispensers.

With 9,400 cash dispensers and multifunction ATMs, 15 million bank cards, and a population of 55 million, France averages 4,318 transactions per machine per month.

French bankers worry that they are "overinstalled" with cash dispensers and question if they will be able to pump up enough consumer demand to justify the estimated 5,000 new machines that will be added to the network in the next five years. There are at present 170 ATMs per million inhabitants, compared to 270 in the United States.

The problems that the French banks have had in building ATM volume indicates that providing easy access to machines through sharing is not sufficient to spur consumer interest. Pricing is not a consideration either, since the French banks, like most European banks, do not charge for cash withdrawals.

Some analysts point out that the comparative success of ATMs in different countries suggests that high transaction levels come from the length of time the system has been in place, coupled with the efforts of bankers to instruct their customers.

Thus Sweden, which put a national ATM network in place more than a decade ago, has the highest transaction level in Europe. Great Britain and Belgium, where competing networks have aggressively promoted ATM usage, do better than West Germany, France, or Italy, where banks have tried to let the concept of universal sharing do the marketing for them. ■

MACHINE BANKING REVIEW

Insiders Debate Issues: Question the Future of POS

Despite the roadblocks, some banks execute new programs and vendors venture out into less predictable locations.

No illusions about POS: Stan Paur, president and CEO of Financial Interchange.

By Maureen Nevin Duffy

NOW THAT AUTOMATED teller machines have prepared us for easy access to our cash, point-of-sale systems that allow us to pay for goods at the time of purchase — straight from the same checking accounts — should fall right in place. But POS networks have never traveled an easy road.

It is to their credit that POS pioneers have more pilots than ever underway. And the longest-standing projects are considered successes.

Use of debit cards, which electronically transfer funds from the customer's account to the retailer's account at the point of sale, generates some $193.7 million in purchases and cash advances monthly, according to the "Nilson Report," a banking industry newsletter. And according to American Banker's 1987 "Consumer Survey," one-quarter of the public would use debit cards.

But behind the scenes, practically every aspect of debit sale services has met with controversy and debate.

Even Entree, the first nationwide debit network — thought by most industry leaders to be an essential step in debit card proliferation — is now the target of an antitrust investigation by the attorneys general of 14 states. Officials are questioning whether the project is restricting competition among other providers. Still, spokespeople for Entree's founders, Visa USA and MasterCard International, say they are proceeding with the program.

Nigel A.L. Brooks, a partner at Arthur Andersen & Co., one of the Big Eight accounting firms, has observed the evolution of POS and muses that today, "it appears to be either ahead of or behind the times."

Mr. Brooks, who heads the company's bank consulting division in the New York metropolitan area, notes that POS was once considered a "cheap" alternative to ATMs. "But now, with the preponderance of ATMs and networks, the concept of debit/-credit card issuers makes a lot of sense. Why not decide at the register whether to incur a debt or pay it off instantly?" he asks.

Players Seek New Ventures

Despite the roadblocks, banks are executing new POS programs, and vendors are producing more sophisticated terminals. Players are even venturing out from the gas station and grocery store successes of POS to less predictable locations, like fast-food restaurants and convenience stores.

"We're working on how to get customers to use ATM cards for POS," says William H. Petrarca, senior vice president of electronic funds strategy at National City Bank in Cleveland.

One of these strategies, the Dayton Project, will bring POS to fast-food places, discount gas stations, and several convenience stores in Dayton.

Mr. Petrarca, who took an active role in the American Bankers Association's original POS guideline committee, has formed a temporary partnership among savings and loans, banks, credit unions, and Ohio's Money Station Network. The only regional network in the state, Money Station, which is owned by seven different bank holding companies, has 2,400 ATMs, 8.5 million cards, and does about 3.5 million online transactions a month, directly with the member banks.

To bolster customer acceptance of the Dayton Project, the group is supplying employee perks, such as T-shirt contests and bonuses. At one store, clerks are awarded a quarter for every POS transaction. In addition, store managers are visiting locations and holding press conferences to endorse the product.

But despite high employee turnover, Mr. Petrarca contends that these markets are key. "The less-than-$20 trans-

action makes the most sense as a target for debit cards," he says, because consumers would be less likely to write a check or charge such a small amount.

Mr. Petrarca hopes that the demand for ATMs in these stores will dwindle. "Most [cash machines] are close to being written off from a use standpoint anyway," he says.

Mr. Petrarca predicts that when fee structures for POS terminal use are put in place, merchants will see more POS than ATM transactions.

The Diebold 1060, "The Everywhere Teller Machine," addresses consumers' cash demands, usually satisfied with a trip to an ATM, with a simple, head-on approach. Not an ATM, the machine, now located in grocery stores, accepts debit, credit, or ATM cards. The consumer inputs a personal identification number, chooses an amount of money, and which account the money is to come from. Provided the funds are there, a draft is printed out in the store's cashier office, which the consumer signs, and the cashier surrenders for cash.

Fast-food restaurants are just one of the less traditional sites for terminals.

An interesting feature of the machines is that the merchant can replenish the machine with cash from the store, thus cutting down the costs associated with cash handling. The 1060 sells for less than $10,000 compared to ATMs, which sell for between $25,000 and $35,000.

The Everywhere Teller is part of Valley Bank of Nevada's pilot, "Card Cash." Dan H. Powell, vice president and product manager for Valley Electronic Banking Services Inc., expects to have 95 of the machines installed in Nevada by the yearend.

The present pilot routes transactions from ATM cards through Plus, Star, MasterTeller, and INN (In Nevada Network), a locally owned network. Credit cards pass through their own networks. The new project will involve only one store and use only INN.

Enhancing Credibility

The Pulse System, operated by Financial Interchange Inc. in Houston, kicked off a major grocery store chain POS program last month. Stan Paur, president of the interchange, hopes that the program with Randall Foods, which operates 39 stores in the Galveston/Houston area, will inspire other retailers and enhance the credibility of POS.

Pulse charges card-issuing institutions 4 cents a transaction, compared with fees charged by other networks that can range as high as 74 cents. Add to this the ongoing cost of support for ATMs, says Mr. Paur, which can run $2,100 or $2,500 a month, and POS appears far cheaper.

He has no "illusions" about POS. But he does believe POS has a base of consumers who will use it if it is properly deployed and priced. "Merchants are understandably cautious about POS," says Mr. Paur. "It is not an insignificant investment on their part and many are taking a wait-and-see attitude, which is quite reasonable."

The Honor System, an on-line processor owned and operated by Florida Interchange Group Inc., is publicizing its POS offerings and ATM services with a sweepstakes for Honor users. Starting in January 1988, the market push will include radio advertising and prizes from merchants, banks, and the network.

Major merchants include the Mobil, Shell, Exxon, and Tenneco gas stations, Circle K convenience stores and Publix supermarkets. Honor's fees to the issuer are 5 cents per POS transaction and 10 cents for each ATM transaction.

Obtaining Cash Is the Motive

For the consumer, obtaining cash is the driving force of POS. "Until the consumer sees what it means to use an ATM card at POS, we'll have to rely on those who normally cash checks or get cash at these locations" to generate the volume, says Christopher Vavricka, executive director of Interlink for Visa, which operates and manages it for the Interlink board.

Interlink is on-line to Lucky Stores, Wendy's restaurants, Payless Drugs, and the Arco Petroleum Co. It is also processing transactions for the California Automated Clearing House Association and looking to expand to other regional clearing houses. Interlink is charging CACHA an access fee of $400 a month, which includes access to VisaNet, a less-than-a-penny charge per transaction after the first 10,000, and no night premium.

"The system has played out best at oil, grocery, fast-food, convenience, and discount drug stores," says Mr. Vavricka. Coincidentally, he notes, "these markets are principally cash- or check-oriented." Also, says Mr. Vavricka, these stores have little to distinguish themselves from each other — gas is gas, milk is milk — and there is not a significant price margin to play with. Mr. Vavricka suggests that a store set itself apart from its competitors by offering better service through debit sales.

An Interlink roundtrip — request for payment and verification — takes less than 10 seconds. By contrast, it takes a minute and a half to pay by check. The quickness of POS is suited for gas stations where customers can now run their debit cards through a terminal, pump their own gas, and, in effect, never see a cashier.

The success of this market has not

NSS Puts Branch Automation in PERSPECTIVE

Competitive edge... increased deposits... improved productivity... effective sales presentations... expanded information sharing... enhanced customer service...

At NSS CORP, we share your perspective that these are the keys to your ultimate goal — increased profitability. So we've used them as our guide in creating fully integrated products and services.

Introducing NSS PERSPECTIVE™

NSS PERSPECTIVE is the framework from which cost-effective, customized branch automation systems are designed, constructed, installed, maintained and supported. NSS PERSPECTIVE responds to the unique and shared requirements of your teller, sales/marketing, administrative, and branch management areas. And because no single branch automation solution is right for every bank, NSS PERSPECTIVE offers a variety of elements that allow you to meet your specific requirements: Analysis and Design; Communication/System Software; Application Software; Hardware; Customization and Integration Services; Installation and Implementation Services; Education and Training; and Maintenance and Support.

NSS PERSPECTIVE is more than hardware, software and services. It's our proven ability to deliver results. It's a staff whose experience and creative talents are unparalleled in the financial services industry. And it's the assurance that NSS CORP will continue to meet your future branch automation needs.

NSS PERSPECTIVE. Complete branch automation systems designed, constructed, installed and supported — with your perspective in mind.

Call an NSS representative today for complete details.

been overlooked by CitiCorp which, through its Citishare, is taking the risk that funds are not available in the consumer's checking account, off Mobil Oil's — and soon Exxon's — transactions. The 18-month-old Citishare program gives Mobil immediate authorization over a direct connect line between Citibank N.Y. and Mobil.

"It's not cheap to put in these connectives," says Allen Sausen, president of Citishare. "Banks want to put them in as [an enhanced service] to customers, but they make no economic sense unless we can find low-cost ways to do this. Logic, therefore, dictates that [POS] run off ATM networks, so that we're working off investments already made."

By next year the Citishare Mobil program will include Citibanks in Maryland, Maine, Utah, Nevada, Arizona, and the remainder of New York State, and Citicorp Savings in Florida, Illinois, California, and Washington, D.C. Plans are also in the works to bring Exxon on-line.

"The intent is to have all our consumers in these regions able to access all retailers," says Mr. Sausen. "Mobil is just one of them. We're focusing first on gas stations and supermarket areas." The service, he says, is not just payment but cash-back as well.

"The trend here is to use ATM cards for POS, as a transaction card versus a cash withdrawal card," says Richard Phegley, marketing adviser for Exxon Co. USA in Houston. Exxon's POS terminals can process ATM cards from networks that include Honor (Fla.), Pulse (Tex.), Mpact (Tex.), Cashflow, and cards issued by Valley National Bank and First Interstate of Ariz.

This August, Exxon started offering consumers the choice of either charging their Exxon account or debiting their checking accounts with the same card. Mr. Phegley believes Exxon is the first to put out a combination card for general use.

Fees for POS

Many believe that now is not the time to charge the consumer for POS transactions. In fact, an Honor spokesman says even the perceived possibility of a charge could have an adverse effect on POS transactions. In other words, if they're now being charged for nonproprietary ATMs, consumers may not want to try POS. None of the

Vendors Revise POS Terminals

Fill local needs

In efforts to survive in a promising but problematic market, vendors are introducing equipment aimed at reducing costs while still supplying more options.

Many of the improvements are aimed at filling local networking needs. Changes allow transaction requests to be polled by a common unit, usually a controller, and concentrated into data packets for fast transmission over one, rather than several, dedicated lines.

Omron Business Systems Inc., Schaumberg, Ill., calls its newest unit the NAC 16. The 16 designates how many communications channels are available. It eliminates the need for an assembler/disassembler to packet the data, and it can support more than 80 terminals. Equipped with all 16 card slots, the NAC 16 costs about $16,000 for a single order.

By batching inquiries into large amounts, the company contends, the retailer is in a better position to negotiate with the authorization processor, since the processor does not spend as much time on the work.

Another feature of the NAC 16, according to Evan Reiffel, product line manager for Omron, is that it allows for point to multipoint transmission. Mr. Reiffel says this capability, for example, can eliminate such steps as sending an American Express transaction through the Visa network first. The transaction can be sent directly to American Express.

Another offering geared to local area networks is Verifone's TRANZiT, a controller that links up to 96 Verifone transaction terminals. It has been tested in a pilot at a major New York retailer, a spokesperson says.

Verifone also has a Zon II, the high end of its Zon Jr. line. In addition to an expanded memory, it can also handle three peripherals at once, a slip or roll printer, bar code reader, and pin pad.

Smart Card producer, Micro Card Technologies Inc., in Dallas, is also billing its product as an aid in reducing on-line time. The card's computer chip, says Paul Wittfeld, vice president of marketing, can be programmed with certain limits so that not all transactions have to be authorized.

Micro Card has also begun to supply component level read/write devices for integration into POS terminals. It also came up to production speed last month on its Card Acceptor Device (CAD 10), which allows retail merchants to verify cardholder identity. It is being delivered in large quantities in Europe first. The units sell for $200 and $100, depending on the quantity ordered.

A sign of the Smart Card's growing credibility is that the Electronic Funds Transfer Association's president, Dale Reistad, late last month directed its card council to examine the future role of "debit cards with a chip" - or smart cards.

Mr. Heckman, chairman of the card council, says the group will look at the test Micro Card will be running with the U.S. Marine Corps and at the various European pilots that have used smart cards. Some of the Marines are using the cards to access their pay.

Mr. Heckman expects a quasi research study to emerge, which may predict debit card use and its evolution 10 years down the road.

Seeking to run POS off ATM networks: Allen Sausen, president of Citishare.

Continued from Previous Page

major banks he knows of, he says, are charging for POS or for ATMs.

Robert Heckman, executive vice president of MTech Corp., owners of the Mpact network, calls fees "disincentives."

The answer, says Mr. Heckman, who is also chairman of the card council of the Electronic Funds Transfer Association, is to use methods that have worked. "We're charging for the debit card in direct conflict with what's been done successfully with charge cards." He believes an annual fee or monthly charge will encourage POS use.

"If POS is an alternative to cash, checks, and credit cards," agrees Mr. Paur of Pulse, "then the cost for its use must be comparable to the other available mediums."

But if the industry is to gain a wide debit customer base by offering initial free service, it must find ways to keep its own costs down. Consequently, clearing houses are trying to convince merchants that it is not necessary to stay on-line all the time. The merchant can save some money by taking risks with card approval. POS can also exist in the off-line environment.

At Internet in Reston, Va., which runs the Most ATM network, president David O'Connor takes the position that clearing houses and on-line services are complementary. He has combined the services of two automated clearing houses and several banks in order to offer consumers a variety of options including checks, debit and credit authorizations, data capture on-line, and online debit transactions.

All Eyes on Entree

For the immediate future, the eyes of the banking industry will be on the progress of Entree. Members will issue 17 million cards in the next three months. "Entree has given debit cards new life, with the huge support of Visa and MasterCard," says Paul Wittfeld, vice president of marketing for Smart Card producer Micro Card Technologies Inc., based in Dallas.

Entree also has support from many banks, thrifts, regional networks, and merchants. Charter members of the Entree network pay a one-time $1,000 licensing fee and 5 cents per card per year. Entree was started by a 37-member organizing committee, picked from the industry by Visa and MasterCard, to establish uniform standards and procedures countrywide.

Projections on significant POS implementation varies. Even F. David Brangaccio, MasterCard's head of Entree, says merchant acceptance of Entree is probably two to three years away. But some others are even less optimistic.

"POS, broadly, is still several years from any significant development," contends Floyd Egner, vice president of Payment Systems Inc., a research firm in Tampa, Fla. "Over the next 15 years, it's definitely going to be an expanding part of the marketplace. But in the near term there are major obstacles, a main one being to find a reason for merchants to accept those cards."■

MACHINE BANKING REVIEW

Midnight Pizza Runs Spur Opening of Student Bank

What started as a simple need to handle growing volume has turned into a full-service branch geared to students.

By Lynn Homa

EACH FALL A MAJOR migration occurs in New York City. Approximately 25,500 students descend upon Manhattan's Upper West Side to attend Columbia University, Teacher's College, and Barnard College.

Lynn Homa is an editorial assistant at American Banker.

Some are veteran graduate students who have established relationships with bank loan departments, others have just turned 18 and never opened checking accounts in their lives. Some are preoccupied with studies; others with parties. But all are in need of a safe place to deposit checks from home, and a quick way to grab cash for books, pizzas, and an occasional movie.

These special needs, plus a general surge in growth of the Upper West Side population, helped turn the Citibank at 111th Street and Broadway into one of the most highly-transacted branches in that part of the city. By 1985 lines had grown so long that the bank began pondering the idea of an off-site location for more ATMs.

"There was a feeling that a need was there," says Larry Rogers, manager of the new ATM annex. "We surveyed the customers and found they wanted more ATMs and shorter lines." By 1986 the bank was formulating plans to satisfy all of its customers — the general community and the students.

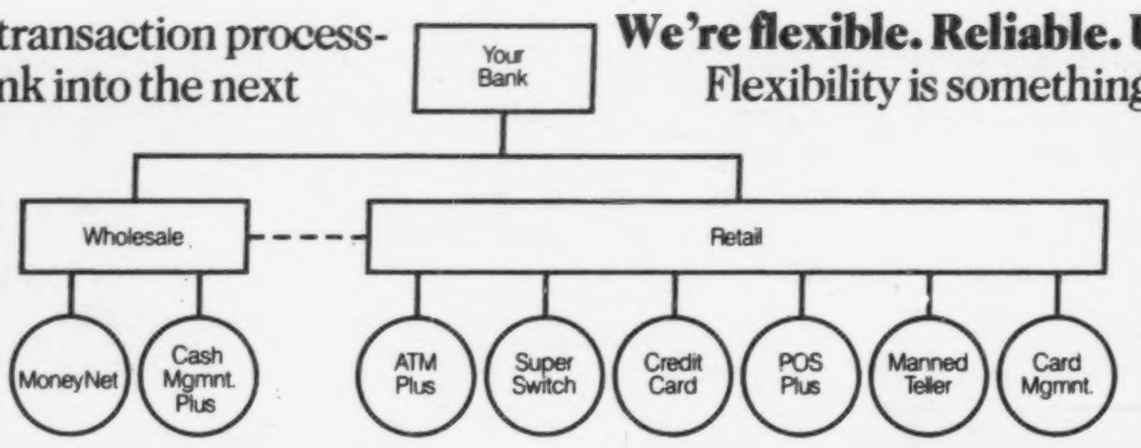
ACTION2000® TANDEM.™
(Remember these two names and you can forget all the others.)

For integrated transaction processing to carry your bank into the next century, those are the only two names you need to know. No kidding.



A system that grows with you.

When it comes to transaction processing software, MTech's ACTION2000 and Tandem have joined together to create the only system that offers both retail and wholesale capabilities in one package. Of course, you purchase only as much of the system as you need right now. But as your needs grow, so can your system. That's because ACTION2000 and Tandem give you more options than anyone else in the business.

Our system is first and foremost.

One reason our systems do more is the fact we've been at it longer than anyone else in the business. Since 1977, to be exact. That was the year we installed our first system. A system which, we might add, is still up and running today.

SINCE 1977

But then, so are a lot of our other systems.

You'll find ACTION2000 and Tandem at financial institutions and EFT networks that demand powerful, dependable transaction processing systems with the flexibility to upgrade and expand as needs change.

We're flexible. Reliable. Unstoppable.

Flexibility is something we work really hard at–in our software, in our hardware and in our people. You'll find we're not so much suppliers as we are partners, listening to your needs and working with you to stay ahead of a constantly changing industry.

And of course, when it comes to dependability, Tandem Non-Stop Computers more than live up to their name.

They're the most reliable in the business–the perfect counterpart for ACTION2000 software.

One other word about dependability: MTech. Every ACTION2000 and Tandem system has the MTech name on it.

That means you've got the backing of the country's leading EFT provider and largest financial data processor. So you can depend on us to be there for you today, and tomorrow. And when you're making a decision as big as this one, that's definitely something worth remembering.

MTech
A Momentum Company

TANDEMCOMPUTERS

The names to remember.

MACHINE BANKING REVIEW

Vendors Face Harder Sell, Must Offer Snazzier Models

Fierce price-cutting and a sluggish market for new orders has brought down two manufacturers in the last year.

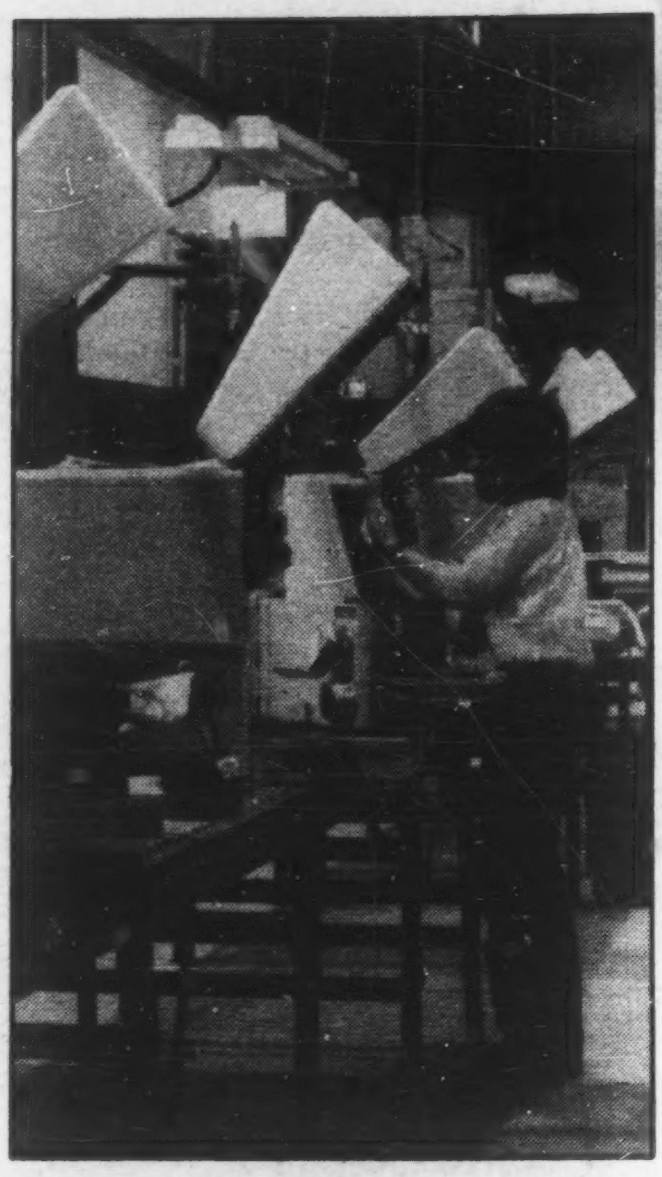
By Thomas P. Fitch

LIKE MANY CONSUMER banking innovations, the automated teller machine has become more sophisticated in the past 10 years.

One way of gauging the maturity of the ATM is to look at the hardware available — there has been a veritable explosion in its technology over the past decade. Most noticeable are the visual options: ATM screens that flash a bank logo, advertising message, or even a sweepstakes announcement aimed at frequent users. Some ATMs have color or touch-sensitive screens; others print checking account statements at the touch of a button.

More significant, though, are the design improvements that the customer does not see, such as a feature on some ATMs that unclogs a jammed paper receipt and keeps the machine functioning. The modular design of some newer models makes it a snap to switch parts as they wear out.

The ATMs of a decade ago were about as inviting as an armored car door with stainless steel buttons, and not easy to use. The menu of banking services they offered was equally rudimentary: ATMs dispensed cash on demand, took deposits, and occasionally gave balance information. Banks were just beginning to install "on-line" systems allowing customers to interact with a mainframe computer to obtain account balances or transfer money between accounts.



Diebold's production plant operates between 70% and 80% capacity, with 425 employees.

Just as noticeable as the evolution in ATM technology is changes in the manufacturing industry that supplies the hardware. Fierce price-cutting and a sluggish market for new orders — the ATM market in the United States peaked in 1983 at just under 14,000 ATMs delivered — brought down two ATM manufacturers in the past year.

Olivetti USA Inc. withdrew from the U.S. market after acquiring Docutel Corp., the Dallas company that almost single-handedly pioneered the ATM industry in the United States.

Earlier this year, Inter Innovation, a Swedish technology firm, acquired Lefebure Inc. In the United States, only Lefebure, a latecomer to the ATM market, and Citicorp are manufacturing touch-screen ATM technology.

Stay in Touch with Your Market

Joining the three leading U.S.-based suppliers of automated tellers — Diebold Inc.. NCR Corp., and International Business Machines Corp. — in the battle for market share are two Japanese firms, Omron Financial Systems Inc. and Fujitsu Systems of America Inc. Both are backed by well-capitalized parent firms, Omron Tateisi and Fujitsu Ltd., and are intent on breaking into the U.S. market with technologically sophisticated ATMs.

But the Japanese firms may be hurt by the continuing softness of the dollar, which makes their ATMs more expensive in the United States. Since Omron and Fujitsu machines are assembled in Japan, a declining dollar has forced them to absorb a 45% difference in the dollar-to-yen exchange rates over the past two years to keep from being priced out of the U.S. market.

Omron Financial Systems and its sister company, Omron Business Systems, which manufactures terminals, have already factored the currency fluctuations in their strategic planning.

"The most radical changes have already happened to us," says Robert Drennan, president of Omron Financial. In a move prompted by the decline of the dollar, the company's touch-screen video terminals are now manufactured in McKinney, Tex., a Dallas suburb. Eventually, it may build ATMs in the United States as well.

Competition from Abroad

The competition from Japan is understated, says Robert Barone, senior vice president of marketing at Diebold. "We don't see a lot of them," he says. "But I think that's a reflection of the size of their sales organizations."

Omron and Fujitsu have been able to

Thomas P. Fitch is a Stratford, Conn.-based reporter.

The 1988 Bankers Diary and Guide is an impressive holiday business gift for clients or business associates, as elegant as it is functional. Including a daily appointment calendar and unique reference features, the *DIARY* is beautifully produced in fine-grained leather with gilt-edged pages, and can be personalized with the recipient's name embossed on the cover in 23 karat gold at no extra cost.

Plan your hours and days, seeing the entire week spread over two pages. The large, clear format lets you note appointments and reminders easily—making this daily necessity doubly useful as a permanent record.

Save time when you need instant access to financial charts and tables—definitions, calculations, interest rates, and tax rates. The *DIARY* contains more than 100 pages of banking and financial facts and figures, researched and edited by the editors of *The Bankers Magazine.* And the data in *the 1988 Diary* will be checked and updated right up to press time, increasing its usefulness as a quick reference to *timely* information.

Invest your time wisely. Order *The 1988 Bankers Diary and Guide* for business associates and clients, as well as for yourself. Generous discounts—up to 42%—allow you great savings on multiple orders, and remember—business gifts can be tax deductible. Value, utility, and tasteful elegance make this the ideal business gift, that will be used every day of the year—a constant reminder of your thoughtfulness.

If you would like to place your order *immediately*, call our toll-free number listed below.

win some choice contracts in the last two years with major institutions like Chemical Bank, Manufacturers Hanover Trust Co., and Seattle-First National Bank. But Diebold continues to hold the largest share of the U.S. market, followed by NCR and IBM.

Still, the competitive balance can change quickly in the ATM business. Mr. Drennan remembers what it was like on top of the heap when he was a marketing manager at Docutel, the company that once led the industry.

"Some other vendors came out and really didn't do much more, but they did it better," he says. "They did it in a way that was more appealing to the buyer as well as the consumer."

His advice to other vendors? "Stay in touch with your market," he says. "Don't rest on your laurels."

The prevalence of shared networks is also putting pressure on ATM manufacturers to build machines less prone to breakdowns. To meet network reliability standards and the demands of ATM owners for more flexible systems, manufacturers have put more software control, or "intelligence," into the ATM itself.

"We think the customers want a very cost-effective system," says Jeffrey Novotny, manager of financial marketing support for Fujitsu. "They want a machine that can perform traditional ATM services and has the capability to add newer features."

Although the technology is improving, the purchase of ATMs and annual maintenance is steadily declining. Today, the average price per machine is between $25,000 and $30,000; it was $35,000 in 1980. Annual maintenance costs have been pared to $2,500 per machine, a quarter of what they were seven years ago.

The prospect of further price declines may give a boost to the market for off-premises cash dispensers in high-traffic retail locations. From mid-1986 to mid-1987, Diebold shipped 5,000 ATMs worldwide from its Newark, Ohio, assembly plant — the largest ATM factory in the world.

Some of these units were Diebold's no-frills cash dispenser, the Diebold 1040 terminal. Mr. Barone says financial institutions are just beginning to install these dispensers. He predicts more will be sold when the unit price drops a few thousand dollars to $9,000 a unit.

Do Enhancements Help?

Even if they are not sure if expensive enhancements like color-screen graphics will attract new users of ATMs overnight — color adds about $1,000 to the price of an ATM — manufacturers are pressing ahead with them.

Fujitsu claims that institutions that place color units next to monochrome-screen ATMs are getting more use at the color models.

"There's nothing scientific, but there may be some more reliable data coming from some of the larger banks," Mr. Novotny says. Among those who have bought Fujitsu's color units recently are Manufacturers Hanover, Seafirst, and California First Bank, San Francisco.

But Mr. Barone of Diebold sees problems with Fujitsu's color screens. "They haven't solved the glare problem," he says. Diebold would like to add color when that flaw is corrected, but "I would say that they aren't any farther along than we are."

Citibank, steering an independent course, is stepping up installation of its touch-screen ATMs to replace more than 600 of its units in the New York metropolitan area. It is relying on hardware supplied by NCR Corp.

Touch-screen ATMs are probably useful for Citibank, which displays a lot of nontransaction information on its ATM screens, Mr. Drennan says. But he doubts the New York bank will have many imitators in the near future, and says Omron has no immediate plans to add a touch-screen capability.

Meanwhile, IBM has been promoting a new version of its 4730 lobby ATM, a machine capable of cashing checks to the penny. Color graphics and other screen enhancements apparently do not weigh in IBM's plans.

"In my opinion, they influence the banker more than the consumer," says Robert E. Coates, an IBM product manager. "I don't really believe that those things change the consumer acceptance. They may make it more appealing, but I can't imagine anyone saying, 'The reason I'm not depositing in that machine is that it doesn't have color.'"

Instead, IBM is trying to streamline the design of the 4730, a machine that even Mr. Coates admits was too bulky to fit into a branch.

IBM plans to sell a version of a machine already in use in Europe in the United States. The U.S. model will read the MICR line on checks, enabling it to cash encoded checks to the penny or deposit them into customers' accounts.

Forecasts by ATM manufacturers of a surge in replacement orders for aging, if not obsolete, hardware vary considerably.

The bulk of Fujitsu and Omron orders have been replacement orders, yet Mr. Drennan of Omron says he does not expect the market to pick up fully until 1989. Thousands of ATMs installed from 1978 to 1982, the boom period for networks, are reaching the end of their useful lives. And many of those the banks are discarding are the older IBM and Docutel models.

Diebold forecasts a 10% increase in ATM revenue this year, slower than its bank security and point-of-sale terminal sales but still respectable.

Mr. Barone says there is "no question" that replacement orders are picking up. ATM replacements currently account for about one-third of Diebold's sales volume, he says, and may some day reach 50% of sales.

But persuading a satisfied customer to turn in an older machine is a daunting task. "Right now our toughest sell is our own customer," Mr. Barone says. "He's very happy with what he's got." ■

Banks Belonging to Networks

Institutions Broken Down by Asset Size
(Percentage of banks using networks)

	Less Than $100 Mil.	$100-$500 Mil.	$500-$1,000 Mil.	$1,000 Mil.-$5,000 Mil.	$5,000 Mil. or More

KEEP UP WITH VITAL CHANGES IN...

The Law of Bank Deposits Collections and Credit Cards

BY BARKLEY CLARK

Second Edition, thoroughly revised and updated

$78.00

No other volume provides so much advanced guidance, and saves you so much time.

To stay ahead of the banking developments and tide of new legislation affecting NOW accounts, consumer lending, the UCC and credit practices and to prepare for the checkless society now coming of age, turn to the classic, now updated, Second Edition of **The Law of Bank Deposits, Collections and Credit Cards.**

- This revision is the only book to contain everything you need to know about collection subjects, and what the UCC and the courts say about: bank deposits, bank checks, collections, credit cards, magnetic coding for computers, EFT, ATMs, letters of credit, midnight deadlines, bank fraud, forgery, and credit rate ceilings.
- Gives you an edge in planning how to creatively and effectively use future technology in bank transactions.
- Valuable in long-range planning... in administration of accounts, setting bank policies... essential for day-to-day operations.
- Supplemented to keep you continuously up-to-date on new cases and developments under the UCC. No bank or bank attorney's library is complete without it.

Subscriber information: Second edition, copyright 1981. One volume, case bound. Cumulative paperback supplements issued three times annually. Supplementation cost: 1987 #1: $47.25, 1986 #3: $45.75, 1986 #2: $44.75. Current cumulative supplement is included free of charge with the main volume; any supplement published within three months of purchase date is also sent free of charge. Supplements are shipped automatically on approval; may be returned free of charge.

BankAmerica Leads in ATM Ownership

Large Banks Report 21% of Machines Are Off the Premises

➥ **Continued from Page 1**

major firms. A Chase spokeswoman said in a recent interview, however, that the New York company owns 399 ATMs nationwide.

High on the list is MCorp of Dallas, which reports 1,100 ATMs. Next is First Interstate Bancorp, Los Angeles, with 1,064 machines. After the top five institutions, there is a large gap. The company trailing First Interstate on the list is Security Pacific Corp., of Los Angeles, with 685 ATMs. (The ATM tables appear on pages 32 and 33.)

Off-Site Locations

The survey also breaks out the number of ATMs in banking offices or facilities and the number in supermarkets, convenience stores, gas stations, and other locations.

The large banking companies reported 21.3% of the machines were off premises (of those with specified locations). Bankers and vendors in interviews said this percentage of off-site placement has been relatively stable industrywide in recent years.

Some bankers question whether off-site ATMs are being used enough to be cost effective. But Al Dominick, senior vice president of Shawmut Bank of Boston, said in an interview he expects off-site ATMs to "expand markedly" in the coming years.

"The cost of the technology is coming down, so it's cheaper to put machines in off-site locations," said Mr. Dominick, who is chairman of the retail delivery system conference for the Bank Administration Institute being held this week in New Orleans.

"And I think the evolution of networks will make a difference," he added. "With the networks that are evolving — regional and national — you have access to an entire population, versus a segment of a population, your own customers."

According to the *American Banker* survey, First Interstate Bancorp in Los Angeles reported the most off-site ATMs. It has 300 machines off premises, or 28.2% of its 1,064 total ATMs.

Next in sheer number of off-site ATMs was Mellon Bank Corp., Pittsburgh, which said 274 out of 628 machines, or 43.6%, were outside bank locations. BayBanks Inc., Boston, reported 250 off-site, or 39.9% of its total 626 machines.

Top 5: Off-site ATMs

Bank	Off-site ATMs
First Interstate Bancorp	300
Mellon Bank Corp.	274
BayBanks Inc.	250
Michigan National Corp.	201
U.S. Bancorp	175

Does not include shared network ATMs or franchisee ATMs.

ATM leader BankAmerica did not specify where its machines were located.

Some institutions reported more off-site than on-site ATMs. U.S. Bancorp, Portland, Ore., reported 175 off-site ATMs, versus 110 on the premises.

Reaching for Cost Effectiveness

Banking industry officials are struggling with the question of how to increase consumer usage of ATMs to make ownership more cost effective. Many banks are hoping that ATM usage will enable them to control increases in the number of tellers and branches, as well as penetrate new markets.

A recent study conducted by Carmody & Co. for Diebold Inc. concluded that an institution with a customer base of 100,000 could save $2.2 million a year if 66% of its customers used ATMs instead of tellers for routine retail transactions between seven and nine times a month. The New Jersey and Ohio-based consultants concluded that the net value to the bank, primarily cost savings, is $2.84 per customer using machines the seven to nine times a month.

Mr. Dominick of Shawmut said growth patterns in ATM ownership could depend largely on the economy and demographics.

"If you think about ATMs," he said, "they're really a fixed-cost delivery device versus a variable-cost delivery device like a human being.

"Probably the most significant factor is going to be the population shift, which is occurring as the baby boomers mature and the number of people entering the work force at the clerical level is declining," he said. "So I think the industry will be faced over the next five years with an acceleration in self-service devices, caused primarily by its inability to hire people to deliver — tellers and even personal bankers or junior level customer service representatives."

B. Lamar Ball Jr., MCorp group chairman for retail and marketing in Dallas, added that the future could bring "a proliferation of ATMs," especially with cash dispensers and other cheaper, more limited-service machines. An example, he said, might be more cash dispensers at firms with which a bank has a commercial relationship.

"We could deliver a perk to the employees and at the same time tie in the employees to the bank through a facility on site," Mr. Bell said.

"I think there are going to be uses and features available five years from now that we can't even imagine today," he said.

Citicorp Additions in New York

Citicorp has begun a dramatic increase in ATMs in the last few months. It now owns about 650 machines in the New York metropolitan area. Spokeswoman Susan Weeks said in an interview that plans are for more than 1,000 units by yearend 1988 in the metropolitan area alone.

She said new technology has resulted in smaller machines, allowing three ATMs to fit in the space formerly occupied by two and thereby reducing customer waiting time.

But a word of caution comes from John MacMillan, an associate with Trans Data Corp., Salisbury, Md. Trans Data is a research affiliate of *American Banker.*

He said preliminary data from a study still in progress shows that 88% of banks and thrifts with more than $750 million in deposits are issuing ATM cards, and of those, 98% own or lease their machines.

"It is no longer a competitive advantage to own ATMs," Mr. MacMillan said. "It is no longer a situation where you can simply attract market share by plopping ATMs out there. You got to make them different" by more marketing or by adding services.

He said research also shows that customers who use ATMs more than four times a month rank ATM availability as their No. 1 criterion in choosing a bank. "So if you can distinguish your ATM system," he said, "it is likely that, on average, you'll retain customers for a long time." ■

Mass. Mortgage Firm To Donate to Homeless

NEW YORK — Commonwealth Mortgage Co., Wellesley Hills, Mass., said it will donate $50 to New England's homeless population for every mortgage application the firm receives in December and January and ultimately approves.

"While most of us anticipate the festivities of the holiday season, our homeless neighbors can only dread the severity of another long New England winter," said chief executive officer John J. Sousa.

A Commonwealth spokesman said the program is expected to raise at least $50,000. The company will coordinate the donation with advocacy groups for the homeless in each of the six New England states. ■

Arab Banks Fight to Survive In US Market

➥ **Continued from Page 2**

large flow of Middle Eastern capital to the United States, investment funds have not been channeled through Arab banks. Instead, Arab investors have preferred using U.S. banks and brokers.

With time, however, some Arab banks may be able to woo a share of this lucrative investment management business. But, the question is, do sophisticated investors really want to make use of Arab banks in the area of investment?

At one point, Middle Eastern banks played an important role in recycling petrodollars through the syndication of loans to less developed countries. But, unlike Japanese banks, most of the Middle Eastern institutions have not hurried to set up investment advisories.

"Arab banks had the money, but they didn't know how to place it," said a New York banker. "They didn't have access to products, and they faced tremendous competition from experienced firms. Moreover, they did not want to pay a premium for expert personnel."

Arab Bank Attracts Arab Investors

National Bank of Kuwait SAK, Kuwait City, believes that it is one Arab bank positioned to attract Arab investors. Kuwait's largest and oldest indigenous bank launched its global operations in the early 1980s with branches in London, New York, and Singapore. With combined assets of $10 billion, National Bank of Kuwait SAK has $1 billion of assets in the United States.

"Our primary goal is not to service the *Fortune* 500, but to sell trade and investment products to clients in Kuwait," said George Nasra, deputy general manager of the New York operation of the National Bank of Kuwait SAK.

"Every Kuwaiti institution and individual with substantial wealth is a potential client for the U.S. branch. We are working to manage some of Kuwait's vast wealth. NBK has had a portfolio-management company in place for three years, and we have proven that the bank can compete with Swiss and U.S. players on a performance basis."

Dr. Odeh Aburdene, Arab Bank branch manager for New York, said he believes that Arab banks in the United States must have the ability to make their own decisions without having to take direction from the main office.

"We can commit larger amounts of money to a transaction, within 48 hours, than any other Arab bank," he said. "Because of this, we have developed a solid reputation.

"Other banks take two weeks to make a decision, and they have no power at the bargaining table. As far as presence, our main competition is Citibank." ■

Banks Are Wary of Latest Technology

Systems Must Have Proven Usefulness

By YVETTE D. KANTROW

Third of a Series

Bankers are pessimistic about the ability of highly touted technology breakthroughs to improve their daily operations, according to an *American Banker* survey.

They are attracted to technologies that help them operate more efficiently and that improve customer service, the survey found. But bankers are putting less emphasis on high-tech, consumer-oriented products that require major marketing efforts to promote.

The *American Banker*'s first annual technology survey asked bankers to predict whether nine technologies would emerge as staples of the banking industry within the next five years.

Out of the nine, only three — desktop publishing, automated voice response systems for customer service, and 24-hour global trading systems — are considered likely to be in widespread use in the opinion of over 40% of 187 senior operations managers at commercial banks.

The technology survey was based on telephone interviews with senior operations managers at 344 financial institutions — 187 commercial banks and 157 thrifts — with $250 million or more in deposits.

Managing TECHNOLOGY

These are the institutions most likely to run their own operations rather than farm them out to service companies.

The survey was conducted in June and July by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper.

This is the third of a five-part series reporting some of the survey results. The complete findings will be pub-

Greenspan Urges Banking Committee To Concentrate on Securities Powers

By ROBERT M. GARSSON

Washington Bureau

WASHINGTON — Federal Reserve Board Chairman Alan Greenspan told the Senate Banking Committee Tuesday that it should focus on legislation permitting banks to affiliate with securities firms and leave more ambitious measures for another day.

In his testimony, the central bank chief specifically endorsed a bill sponsored by Sen. William Proxmire, D-Wis., and Sen. Jake Garn, R-Utah, that would repeal sections of the Glass-Steagall Act that prevent banking concerns from underwriting most types of securities.

More comprehensive legislation introduced by Sen. Timothy Wirth, D-Colo., and Sen. Robert Graham, D-Fla., has desirable features that could be added to the Proxmire-Garn bill, Mr. Greenspan said. But it permits banks to enter too many fields too quickly.

"It seems to us that there are major advantages to proceeding on an incremental basis, starting with securities powers — where the rationale for change has been clearly established," he said.

The Graham-Wirth bill would permit banks to affiliate with a broader array of financial services firms, including insurance companies. It was

Court Backs FDIC in Loan Suit

WASHINGTON — The Supreme Court on Tuesday bolstered the power of federal regulators to collect debts owed to failed banks that are taken over by the government. The court ruled 8-0 against a Louisiana couple seeking to avoid repayment of a $468,000 loan that financed the purchase of a farm. The couple argued the loan is invalid because the now-closed bank had misrepresented the value of the property. Justice Antonin Scalia, writing for the court, said the Federal Deposit Insurance Corp. must be able to rely on bank records when it takes over a failing bank, and that a loan secured by alleged misrepresentations is not canceled in such circumstances. The FDIC is therefore entitled to repayment of the loan, the court ruled.

Customs Starts Taking Cards

WASHINGTON — The U.S. Customs is accepting Visa and MasterCard as payment for customs duties at four international airports in the United States. Ten other major airports will begin accepting the cards beginning Feb. 1. The Treasury Department last October signed an agreement with four banks to handle payments to the government by Visa or MasterCard. Customs has selected Security Pacific Bank, Los Angeles, to handle its credit card program.

PaineWebber to Get Upgrade

NEW YORK — The long-term debt ratings of PaineWebber Group Inc. were put on review for possible upgrade by Moody's Investors Service. About $375 million of securities could be affected. The rating agency said, "The review has been prompted by PaineWebber's announcement of a $300 million capital infusion, in the form of preferred stock, by the Yasuda Mutual Life Insurance Co. of Japan."

Primerica on CreditWatch

NEW YORK — Primerica Corp.'s senior debt, subordinated debt, preferred stock, and commercial paper have been placed on Standard & Poor's Corp.'s CreditWatch with negative implications. About $740 million of debt is affected. Primerica recently announced a 5 million share stock repurchase, which may lead financial leverage to remain at higher levels than the rating agency had previously anticipated. And, Smith Barney, Harris Upham & Co., a Primerica unit, has underperformed S&P's expectations and probably will require capital support from Primerica.

Atlanta Thrifts to Merge

ATLANTA — First Liberty Financial Corp. has signed a nonbinding letter of intent to acquire Valdosta Federal Savings & Loan Association for $21 a share in cash, or $9.5 million. The merger is subject to approval by Valdosta's shareholders and federal regulators. Valdosta has assets of $62 million, and First Liberty has $1.06 billion in assets.

Arizona S&L to Be Acquired

PHOENIX — Prime Financial Partners has signed a letter of intent to acquire all of the outstanding stock of Universal Savings and Loan Association, Kingsman, Ariz., in an exchange of securities. The value of the deal was not disclosed. Universal has $118 million in assets.

There's Life After Glass-Steagall For Wall Street, Report Says

In Short Term, at Least, Profitability Shouldn't Suffer

By JED HOROWITZ

NEW YORK — Commercial bankers, bolstered by Reagan administration and congressional support, say they smell victory in their attack on Glass-Steagall Act restrictions. But at least one analyst thinks investment banks should not lose sleep over bank competitors.

"The impact of the commercial bank entry would probably be felt most severely in corporate equity and debt underwriting, producing pressure on spreads," wrote Michael Goldstein in a new report for Sanford C. Bernstein & Co. However, he added, "it seems unlikely that commercial bank entry will significantly worsen profitability."

Mr. Goldstein offered a somber explanation, however. The big Wall Street houses, he wrote, already are seeing return on equity sag because of "existing competition and cyclical forces." Commercial banks, at least in the beginning, will be a negligible influence.

Nevertheless, in areas where commercial banks now meet Wall Street head to head, they have made some progress. Mr. Goldstein compiled statistics on market share in government bond trading, Eurobond underwriting, municipal bond underwriting, private equity and debt placements, and swaps.

"Commercial banks have a composite market share of 10% to 30% in most of the businesses in which they now compete directly with the investment banks," he wrote in a report titled "The Investment Banking Industry."

And in one area — currency and interest rate swaps — banks are dominant. Major commercial banks arranged 70% of all currency and interest rate swaps in 1986.

In the related area of foreign exchange trading, the banks also display a Midas touch. The five largest U.S. banks reaped $1.7 billion in revenue from foreign exchange trading over the past 18 months, including almost $700 million in the first half of 1987. Investment banks' currency trading revenues pale by comparison.

Mr. Goldstein predicts that banks will subsidize their push into new underwriting areas with foreign exchange trading profits. However, he wrote, the securities industry has little to fear from their competitors in the short term.

Commercial Bank Market Shares

	1986
U.S. Securities Trading	20%
Municipal Bond Underwriting	27
Private Placements	19
Private Debt Placement	26
Swaps	70
Eurobond Underwriting	10

Sources: Federal Reserve Board, Investment Dealers Digest, Euromoney, Sanford C. Bernstein estimates.

The brass ring for banks is the right to underwrite corporate securities. But initially, they are moving into less profitable areas — underwriting commercial paper, mortgage-backed securities, other asset-backed securities, and municipal revenue bonds. Mr. Goldstein predicts that the banks eventually will win 20% to 30% of the total municipal bond market, and a somewhat lesser share of the commercial paper and mortgage-backed markets.

"The implications for investment bank profitability [in these areas] are relatively minor," he concluded. The top investment banks — First Boston Inc., Morgan Stanley Group, and Salomon Brothers Inc. — earned only about 7.5% of their profits, or $400 million, from the three areas in 1986.

Many brokerage firm officials say banks can have these markets. Profit margins are slim or nonexistent, in part because money center banks already have whittled fees through their placement of commercial paper and other securities. Salomon Brothers' well-publicized move out of municipal bond underwriting and commercial paper, followed by trimming by several other firms in these areas and in mortgage-backed securities, typifies the attitude.

Few Wall Streeters, however, doubt that the banks have the muscle to compete in the corporate market. In Europe, where there are no Glass-Stea-

Investment: Page 8 ➸

Banks Helped PaineWebber Find Investor

By DAVID NEUSTADT

NEW YORK — Two commercial banks, Morgan Guaranty Trust Co. and Bankers Trust Co., filled the investment banking roles when a Japanese company acquired a stake in PaineWebber Group Inc.

Morgan represented PaineWebber, while Bankers Trust worked with Yasuda Mutual Life Insurance Co.

This transaction shows the strength of commercial banks in international merger and acquisition work, according to Stephen Goodman, a managing director at Bankers Trust. For example, foreign companies participated in 23 of the 41 public deals Bankers Trust handled in 1986. Only about 30% of Wall Street's deals involve foreign companies, Mr. Goodman said.

Yasuda is buying 6.7 million shares of PaineWebber preferred stock and warrants for $300 million, which will give the Tokyo-based company an 18% stake in the brokerage firm. If converted into common stock, the warrants would increase its holding to 25%.

PaineWebber, one of the few remaining independent brokerage firms, will get a friendly stockholder, which should block any takeover attempts. The firm's capital will increase to $1.45 billion, which will help expand its merchant banking and trading activities.

Yasuda, Japan's fifth largest life insurance company, will get international investment expertise and can expect a good return on its investment.

"The key point from our client's perspective is the financial return," said Mr. Goodman. "The preferred stock has a 7% coupon, and there is some potential for capital appreciation."

Other Wall Street firms have sought ties with Japanese companies. Nippon Life Insurance has invested in Shearson Lehman Brothers Holdings Inc. and Sumitomo Bank in Goldman Sachs.

Decision Made in June

PaineWebber decided in June to seek a Japanese investor and tapped Morgan to conduct the search. When asked if Morgan was picked to avoid giving the sensitive job to an investment banking competitor, PaineWebber chairman Donald Marron said no. Morgan has "the best range of relationships in Japan" among both investment banks and commercial banks, he said.

Morgan did its analysis well, Mr. Marron said. The firm picked Yasuda as the best fit, and it was the first and only Japanese company approached, he said.

Morgan has been active in Japan for many years. In the 1920s, it helped the Japanese government arrange its first U.S. dollar-based borrowing. The bank set up an office in Japan in 1961 and helped Sony issue American depository receipts in 1962, a first for a Japanese company.

Bankers Trust has been increasing its activity in the Far East. Earlier this year, it opened a merger office in Tokyo.

Yasuda picked Bankers Trust as its adviser after it was approached by Morgan, according to Mr. Goodman. "Probably, there was the feeling that in dealing with a securities firm, [Yasuda] might be slightly better off with someone that was not directly a competitor," Mr. Goodman said.

Bankers Trust has also been involved in several other cross-border financial services transactions, according to Mr. Goodman. ■

MARKETING MANAGEMENT

Managers Must Pique the Entrepreneurial Spirit

By PAUL A. WILLAX

ALAS, AMONG THE scores of vendor booths at the recent U.S. League annual conference in New Orleans, I was able to find only one sales outlet offering the commodity most essential to the future success of the savings industry.

There, amid the key chains, computer consoles, and cash machines, was a lone purveyor of management talent — an executive recruiting firm offering to hunt for the kinds of managerial resources that the attendees would have to gather around them if their institutions are to survive the tumult of their near-term future.

Perhaps the small representation of the executive recruiting industry reflected the fact that most of us attending the conference were confident that, if we participated in all the sessions, listened intently, and tried real hard to implement what we heard, everything would come out all right once we got back home.

Many of us, I'm sure, were convinced that, with a little help, our heads could function just as well — probably better — than the new ones the hunter in the exhibition area was offering to find for us.

Tom Bloom

This simplistic conclusion of course sidesteps the fact that, as senior managers, we must be concerned with the quantity of our management as well as its quality.

There must be a sufficient amount of management in our shops to supplement our own talents, whatever they may be. For purposes of this article, however, we'll leave that topic undisturbed, and focus on a related but even more critical issue: Given that quality and quantity standards can be met, what kind of manager are we looking for? What characteristics mark the type of executive leader that is essential to our task?

It is clear, this writer believes, that more than a traditional B-school manager is called for. While good management has always been the vital ingredient in the business process (To paraphrase Harry Truman: "All bucks stop there."), a unique brand of management leadership is needed now, because we are confronted with totally new and different and threatening circumstances where:

- Volatility and rapid change plague our marketplaces.
- Rebuilding and refitting our basic institutional structures is a primary task.
- Traditional planning is encumbered by a discontinuity of events.
- Opportunity exploitation is an essential key to "winning."
- Risk is unavoidable.
- Competition is advantaged; unburdened by regulation or impedimenta of the past.
- A single decision can make or break a company.

Given this daunting environment, and the enormity of the tasks that must be accomplished within it, it is this writer's belief that today's and tomorrow's generations of thrift managers — our "new generations of leadership" — must be entrepreneurs, innovators, and doers who are true to a compelling vision.

On one hand, they must be big-picture strategists willing to invest copious amounts of sweat equity in a relentless drive toward the mountaintop that others perceive only dimly in the distance. On the other hand, they must also be pragmatic, hardworking, risk-managing, street-smart tacticians who not only can see the forest for the trees but can spot the shortcut through the bushes.

Those 'E Words'

To be sure, "entrepreneur" and "entrepreneurial" have become the somewhat overworked "E words" in the business world, rivaling the all important "Y word" in our consumer marketplaces. But it can be argued that the comprehensive, on-point definition of entrepreneur has been frequently misunderstood and misused, thereby depriving it of its rightful significance in the affairs of our contemporary savings industry.

In most instances, we have tended to think of an entrepreneur as the ingenious founder of his or her own business — the builder of the better mousetrap or the Model A Ford.

However, in his research as a professor at the Center for Entrepreneurial Leadership at the State University of New York at Buffalo, your writer has learned that the builder of a better mousetrap is only one species in the genus "entrepreneur" — the classic entrepreneur, who sees a need and acts to fill it at a profit. This type is often thought to be born, not made. (And research tends to support this conclusion.)

But there are two equally important species of entrepreneurs, and both are more important from our industry's standpoint. First, we have the "intrapreneur," who works within the organization, developing new functions and product lines and exploring new business opportunities.

Secondly, there is the "change-agent," who manages renewal efforts and charts the turnaround of enterprises that are striving to remain competitive, viable, and profitable in a changing environment.

By way of illustration, if your business was in rodent control, the change-agent might be engaged in making your old traps better, cheaper, and more salable, while the intrapreneur might be involved in the engineering of a new type of "flute-tooting trap" that charms the mice into your company's diabolical devices.

Willax Says:

The 'intrapreneur' works within the organization, developing new functions and product lines and exploring new business opportunities. The 'change-agent' manages renewal efforts and charts the turnaround of enterprises that are striving to remain competitive, viable, and profitable in a changing environment.

Unlike mice or classic entrepreneurs, neither intrapreneurs nor change agents are necessarily the products of their respective genetic pools. They can, in contrast, be "grown" to the extent that their potential for entrepreneurship is recognized and encouraged.

Therefore, despite the inevitable "nature versus nurture" debates, there is documented evidence (this writer's employer among the examples) that a company can nurture an entrepreneurial spirit and make business leaders out of its managers.

Dual CEO Title

Obviously, any attempts to cultivate a pervasive entrepreneurial esprit must begin at the top of the shop with a transformation of the "chief executive officer" to the "chief entrepreneurial officer."

This change in title cum mind-set is essential in order to effectively short-circuit the traditional managerial lock-

ECONOMIC PERSPECTIVE

Twin Threats Pose a Test For Greenspan

By ROBERT J. SAMUELSON

IT'S HARD TO ENVY Alan Greenspan, the new chairman of the Federal Reserve Board. The Fed regulates interest rates, but in the wake of the stock market crash, dangers lurk no matter how Mr. Greenspan moves rates. Higher rates could threaten an economic slowdown or recession. Lower rates could cause a dangerous collapse of the dollar and higher inflation.

In some ways, Mr. Greenspan was one of the big winners of the stock market crash. It enabled him to escape quickly from the shadow of his predecessor, Paul Volcker. No one ever doubted Mr. Greenspan's intelligence or his credentials as an economist. But crisis management is an art — not a science — and everyone wondered whether Mr. Greenspan had the needed instincts and skills. For the moment, he has quieted the critics.

When the market dropped sharply, he acted decisively. The Federal Reserve made added credit available to banks, which could lend to hard-pressed brokers or mutual funds. The financial panic did not feed on itself because securities firms became insolvent. Despite this impressive performance, the basic question about Mr. Greenspan's leadership remains unanswered: *How will he cope with the twin threats of inflation and recession?*

His freedom to maneuver is modest. In the weeks since the crash, the global dimensions of the economic impasse have become clear. For the first half of the 1980s, the world economy grew in a dangerously unstable way. The United States' huge appetite for imports propelled other economies. The immense U.S. trade deficit corresponded to the enormous trade surpluses of West Germany, Japan, Taiwan, and other countries. The question now is whether this pattern of global growth can be gracefully reversed or whether it ends in a worldwide recession.

Traditional Medicine

Lower interest rates are the traditional medicine for an economic slowdown. Indeed, the Fed cut a key interest rate after the crash as a means of providing short-term emergency credit. The so-called Fed funds rate was reduced from about 7.5% to 6.75%. Mr. Greenspan's dilemma is that he can't go much farther down this path — maybe he's already gone too far — without creating as many problems as he solves.

All the evidence points to continuing U.S. prosperity. There's already something of a mini-export boom. In the third quarter, gross national product grew at a brisk 4.1% annual rate. Of course, the stock market crash could change the outlook. Overburdened by debt and alarmed by the crash, consumers may delay spending. But unless the effect is dramatic, lower interest rates risk overheating the economy and worsening inflation.

The unemployment rate is now 6%. Factory utilization is rising sharply. The economy can't tolerate both an export boom and strong domestic spending without fostering inflationary pressures. All inflation indexes are rising

Fed Approves Four Mergers, Dismisses Redlining Complaints

By BARBARA A. REHM
Washington Bureau

WASHINGTON — The Federal Reserve Board has approved merger applications by four bank holding companies, despite concerns of diminished competition and protests of poor community investment records.

After review, the Fed dismissed the reinvestment complaints.

Valley National Corp., Phoenix, was given approval on Monday to acquire California Valley Bank, Fresno. With $9.2 billion in deposits, Valley National is Arizona's largest banking firm. California Valley Bank, with $170 million in deposits, ranks 170th of 432 banking concerns in that state.

The Fed did not raise any issue about the possible effect of this merger on competition, but it did weigh protests by PPEP Housing Development Corp., Tucson, and the Salt Lake Citizens Congress, Salt Lake City. These groups claimed that Valley National's subsidiary bank does not cash government checks for all people with valid identification and does not have a reasonable reinvestment record in rural areas.

"A review of [Valley National Bank's] loan portfolio indicates that there is a reasonable distribution of loans between urban and rural areas, given the fact that over 75% of the state's population resides in Phoenix or Tucson," the Fed said.

Valley Bank of Nevada, Las Vegas, with $1.3 billion in deposits, also gained Fed approval on Monday to merge with Security Bank of Nevada, Reno, with $429 million in deposits. In this case, the Fed cited concerns of concentration of assets and deposits and reduced competition, because the two banks serve four common markets. However, thrifts in each of these areas "exert a significant competitive influence that mitigates the anticompetitive effects of this proposal," the Fed concluded.

Equimark Corp., Pittsburgh, also got the go-ahead from the Fed to acquire Liberty Financial Group Inc., Horsham, Pa. Equimark is the 11th largest Pennsylvania banking organization, with $2.1 billion in deposits. Liberty is the state's 33d largest banking company with deposits of $357.8 million. The Fed approved the merger on the condition that Liberty discontinue investing in real estate through its subsidiary, Wynnewood Plaza Inc.

Finally, the Fed approved the acquisition of Delaware Trust Co., Wilmington, by Meridian Bancorp, Reading, Pa. Meridian is Pennsylvania's fifth largest banking company, with deposits of $5.4 billion. Delaware Trust is that state's third largest with $952 million in deposits. The Fed noted no concentration problem with this merger, because the two "do not compete directly in any banking market."

The Fed dismissed community reinvestment complaints charging discrimination in lending against both Meridian and Delaware Trust. Both concerns have favorable records, the Fed said, and have outlined specific future steps to improve their community investment practices. ■

Maryland Bank Plans Issue Backed by Credit Cards

By EVELYN WALLACE
The Bond Buyer

NEW YORK — Maryland Bank's $500 million of securities backed by credit card receivables, targeted for pricing next week, is an issue that promises to bring some new twists to the now-familiar asset-backed format.

The proposed deal will be the first public asset-backed sale for Newark, Del.-based Maryland Bank, which has a $2.4 billion portfolio of credit card receivables. Maryland is the sixth largest bank credit card issuer, the third largest MasterCard issuer, and the largest issuer of premium MasterCards in the country, according to the bank.

The First Boston Corp. will lead manage the MasterCard and Visa-backed deal, which could possibly be priced late this week. Goldman, Sachs & Co. will act as comanager.

Although credit card-backed securities were not offered publicly until last January, the market has gotten off to a promising start. To date, about $1.9 billion have been issued, according to First Boston. Securities backed by auto loans, which were first sold publicly in May 1985, comprise the bulk of the $20.5 billion market for nonmortgage asset-backed securities, a First Boston analyst said.

Depending on market conditions and investor preference, Maryland Bank may offer its pass-throughs with a floating rate based on the one-month London interbank offered rate, a feature new to the public market for credit card-backed deals.

This would offer institutional investors one of the highest short-term yields available, without the risk of investing with a branch of a foreign bank, said Vernon Wright, a vice president and manager of capital markets at Maryland National Bank, the Baltimore-based sister bank of Maryland Bank.

Maryland National, Maryland Bank, and Washington, D.C.-based American Security Bank are the three major subsidiaries of Baltimore-based MNC Financial Inc.

The deal would also be the first in the public or private secondary market for credit card receivables to offer investors protection against irregular payments. For the first 36 months of the deal's life, investors would receive uniform interest payments, while principal payments are reinvested in other receivables, said Robert Houghton, an associate in the asset finance group at First Boston.

During the final 12-month amortization period, investors get back one-twelfth of their initial investment each month, Mr. Houghton said. This payment certainty allows institutional investors to better plan their reinvestment schedules.

Ground was broken for this type of structure in the collateralized mortgage obligation market, where planned amortization classes, or Pacs, have been popular since they were invented last year.

Maryland Bank expects to win a triple-A rating for its deal from Moody's Investors Service and Standard & Poor's Corp. The rating would be based largely on a letter of credit from a bank. The issue would be the second largest such deal to date, second only to First Chicago Corp.'s $800 million issue in September.

Selling assets gives the bank an alternative funding source to, say, issuing certificates of deposit or long-term debt, Mr. Wright said. It also allows the bank to continue expanding its portfolio.

Even though Maryland Bank has yet to participate in the public market for asset-backed securities, it has placed several issues privately. Last December, for example, Morgan Guaranty Trust Co. sold $175 million of its securities backed by Visa card receivables. ■

Investment Banks Will Weather Storm

➸ Continued from Page 3

gall-like barriers, the capital-rich commercial banks are formidable competitors. Citibank, Morgan, Chemical, and Bankers Trust are in the top ranks in many Euromarket activities.

Closer to home, commercial banks have long been allowed to trade and sell government and government agency securities. Mr. Goldstein finds, however, that their "commitment to the trading businesses (as measured by long inventories) has grown at a rate well below that of the investment banks."

From 1979 through 1986, commercial banks' government bond portfolios grew at an annual rate of 19%, compared with 37% for the top investment banks. The growth rates fell to 17% and 23%, respectively, for other debt securities. On the other hand, commercial bank profits from trading activities have risen at about the same rate as those of their investment banking cousins, Mr. Goldstein wrote.

Many commercial bankers this year are bragging about their relative meekness. Their cautious bond trading saved them from heavy losses earlier this year when volatile interest rates lowered the value of bond portfolios, they say. Not all commercial banks, of course, were so conservative. J.P. Morgan saw profits in its $12 billion investment portfolio slide from an enviable $840 million at the beginning of the year to $47 million at the end of September. The recent drop in interest rates, however, has no doubt replenished some of Morgan's unrealized gains.

Mr. Goldstein did not discuss commercial banks' merger and acquisition advisory activities. But he supports the general wisdom that over the next five years the "supports of the mergers and acquisitions business" will be undermined by a variety of economic and fiscal factors. This can hurt the top investment banks, which he says garnered 50% of their net profit through merger fees and risk arbitrage from 1982 to 1986.

Commercial banks, however, spy opportunity. Since the market crash on Oct. 19, for example, the names of Morgan Bank, Chase Manhattan Bank, Chemical Bank, and Bankers Trust have dominated tombstone advertising in newspapers. Though commercial banks are still minor players in the mergers game, they are sending a clear message — we do friendly deals and offer long-term advice, they say. We have the capital and the talent to help with financing. ■

CoreStates Moves into Nationwide Point-of-Sale

Toledo Trust Is First Bank Customer for Philadelphia Company's Access System

By JEFFREY KUTLER

Corporate Strategy

NEW ORLEANS — CoreStates Financial Corp., Philadelphia, a national power in electronic banking through its Mac automated teller machine network, is trying to make a similar mark in the point-of-sale payments business.

CoreStates, the parent holding company of Philadelphia National Bank, has signed the Toledo Trust Co. as its first national point-of-sale customer. After three months of testing, the Ohio bank is using CoreStates' system to deliver transaction processing services to credit-card-accepting merchants in five states.

The arrangement gives Toledo Trust access to technology that would be costly to develop on its own. It has attracted merchant customers as far away as Niagara Falls, N.Y., and Tampa, Fla.

Outlays for Electronic Delivery Systems
Page 16

For CoreStates, the deal represents an initial foray into a market that several giant telecommunications providers are turning into a competitive free-for-all.

Those companies include GTE Corp., McDonnell Douglas Payment Systems Co., J.C. Penney Systems Services Inc., and Sears Payment Systems Inc.

Citicorp, MCorp, Mellon Bank Corp., and Security Pacific Corp. are among the few banking companies that Douglas Anderson, executive vice president of Philadelphia National Bank, considers direct competitors for CoreStates' point-of-sale program. CoreStates' program is called Access.

"We feel we are far enough along the learning curve that we have an advantage," Mr. Anderson said.

CoreStates has received little notice outside the Mid-Atlantic region but has been gathering electronic point-of-sale experience since 1983 when it conducted a test for Sun Co. gasoline stations around Philadelphia.

Its point-of-sale network has grown to 5,000 terminals nationwide, with thousands more on order. The number does not yet compare to McDonnell Douglas' 160,000, but it is a strong beginning from a regional base.

Mr. Anderson said many of his competitors are concentrating mainly on the data communications aspect of

Expanded Powers Will Require Curbs On Deposit Insurance, Fed Official Says

By PETER MANTIUS

ATLANTA — Federal deposit insurance needs to be scaled back before banks are granted additional powers in the securities business, according to Robert Forrestal, president of the Federal Reserve Bank of Atlanta.

That concept is a clear departure from recent proposals to reform the nation's financial system. The chairmen of the Federal Deposit Insurance Corp. and the Securities and Exchange Commission support plans that would let banks operate securities affiliates that are legally separate from banking operations.

The president of the Federal Reserve Bank of New York, E. Gerald Corrigan, wants to see three types of holding companies that would have distinctly different powers.

But Mr. Forrestal, speaking at the Connecticut Economic Club's annual convention in Stamford, expressed doubts that so-called walls between types of institutions or divisions within one institution can effectively control risks to insured deposits.

"We need to free ourselves of the idea that we can solve current problems with new institutional structures," Mr. Forrestal said. "As time goes on, the walls we create — be they 'fire' or 'Chinese' — have a tendency to develop holes and crumble."

As an alternative, Mr. Forrestal proposed limiting deposit insurance to $100,000 in a single transaction ac-

Consumer Groups Ready for Fight On Disclosure Bill

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Consumer groups plan to battle lenders over a provision in a credit card disclosure bill that would prohibit states from imposing tougher laws than the federal government.

The Senate Banking Committee last Wednesday approved a bill by voice vote that would would require credit card issuers to disclose the annual fee, the interest rate, the method of calculating the balance, and the grace period during which no interest is charged on an unpaid balance.

BANKING TRENDS

Mergers May Open Door for Superregional Trade Associations

By DR. PAUL S. NADLER

FOR A QUICK STUDY of what is happening to banking, it is worthwhile to take a look at what is happening to banking's state trade associations.

The associations have always been the backbone of smaller banks, to which they have turned for ideas and help both in operations and in winning a favorable environment from legislators.

It is sad that the major banks seldom show much support for the group at state association meetings any more. When the associations hold investment seminars and management development programs, the states' leading banks are usually represented only by correspondent officers who are there to do business rather than to learn. It is as if the large banks want everyone to know they have nothing to learn from the ideas that are important to their smaller brethren.

One trend that has developed in the past few years is the growth of the state independent bankers associations. These groups, which focus on the problems and goals of community banks, have grown in strength and size, and some have become more useful to local bankers than the regular state associations.

To some outside observers, the growth of the independent bankers groups seems unnecessary because the state associations are themselves largely devoted to the problems of the community banks. They are not captives of the largest banks in the state by any means.

But human nature being what it is, having state associations of independent banks gives the bankers another organization to join and, more important, another set of "chairs" to work through on the way to being state president for a year.

There is a lot of honor in being state president and a lot of challenge and fun. So having two associations in the state gives the banker who wants to look outside of his home bank for challenges that much more opportunity to make a name for himself in the state.

Being an executive in a state trade association is no easy task. They have to lead and pretend they are following. Their areas of concern range from what legislation is the wings to whether the hotel overcharged for drinks at the convention and who should sit where at the annual banquet.

Tenure is something that simply does not exist in trade association work. And more than once an unsuspecting trade executive has been asked to step outside of the meeting for a minute only to be told upon his return that he has been fired. Keeping fences mended with the bankers of the state is thus a key part of the trade executive's job, and those who do not make every effort to understand what their constituents want, and want now, find their tenure brief indeed.

Nadler Says:

What worries the leaders of banking groups today is how the changing structure of banking under deregulation is likely to affect their associations.

But what worries the leaders of banking groups today is how the changing structure of banking under deregulation is likely to affect their associations.

Already we have seen some thrift associations combine with other thrift groups, and even, in some states, bank associations combine with thrift groups. With deregulation and the similarity of powers it has brought to banks and thrifts, there is diminishing need for two associations to handle the same activities.

Another worry for trade execs is whether the geographical expansion of banks and the development of superregional firms will make it necessary for state associations to combine into regional groups to avoid expensive duplication of functions.

"We don't need six trade associations in New England all providing full service to the banks that are operating in several of the states," says Paul Foley, president and top trade executive of the Massachusetts Bankers Association.

"Why should a major superregional pay $60,000 a year to each state association for membership?" he asks.

Profitable Activities

Mr. Foley says we are likely to see superregional associations develop with representatives situated in each state capital to deal with specific legislative issues.

Maybe this helps explain why more associations are looking at developing activities that generate a profit, such as regional schools or compliance programs, instead of depending on dues for most of their funds. As the banking industry tries to curb noncredit expense, association dues certainly are open to cuts.

But as associations try to remain viable and justify the continued receipt of dues, they are becoming leaders in developing new programs an pushing for new ways to serve their bankers. This has led to far more imaginative banking conventions and programs and far less emphasis on the traditional convention — where socializing was the key motive for attendance.

And if the bankers feel they can honestly make a deeper wedge into the areas of real estate and insurance, and they feel their state associations can help them in this regard, then the present fears of a lessened role for state associations in our banking structure could well be terminated almost overnight and be replaced by greater dependence on the state associations than we have witnessed in a long time. ■

OVERVIEW

Severity of Contraction Depends on Washington

By H. ERICH HEINEMANN

THE RISK is rising that the United States economy may face a serious drop in business activity in 1988. The odds still strongly favor a short, relatively mild contraction.

The longer policymakers procrastinate in taking actions needed to defuse the burgeoning crisis in world financial markets, however, the greater the likelihood of a substantial decline. Washington is paralyzed. Wall Street seems mesmerized as the drama spins toward an uncertain conclusion.

The international value of the dollar is the key to the business and financial outlook — as well as Washington's Achilles' heel. Martin Feldstein, once chairman of President Reagan's Council of Economic Advisers and now one of the administration's sharpest critics, warned last week that "investors around the world are no longer willing to finance the trade deficit implied by the dollar's current level."

Nonetheless, Federal Reserve Chairman Alan Greenspan is under pressure from the White House and governments in Japan and Europe to stem the dollar's decline. This implies higher U.S. interest rates and more downside risk to the economy.

Much of the trouble can be traced to the popular but illusory idea of international economic cooperation. If only the Good Fairy from the Group of Seven would wave her magic wand, all those nasty troubles in the financial markets would go away. In effect, the White House has been trying to sell the world the notion that Tokyo and Bonn, not Washington, are the critical players in the dollar game.

Heinemann Says:

If only the Good Fairy from the Group of Seven would wave her magic wand, all those nasty troubles in the financial markets would go away.

President Reagan summed up his case in his address to the annual meeting of the International Monetary Fund in September: "I call on the surplus countries . . . to find the political gumption to stimulate their economies without reigniting the fires of inflation . . .

"The health of the world economy does not hinge solely on U.S. budget policy. As the U.S. budget and trade deficits decline, other countries must take up the slack, particularly on imports from developing countries."

This sounds fine, especially in a unidimensional report on the evening TV news. As a practical matter, though, the result has been to shift the onus for constructive action from Congress to the Bundesbank, the West German central bank, and/or from the White House to the Ministry of Finance in Tokyo. The outcome was predictable — paralysis and counter-productive action.

For example, Congress is still bogged down in wrangling over the details of a modest packet of fiscal reforms. Even if fully implemented, these would hardly make a dent in the Treasury deficit.

In reality, the outlook for the federal deficit is bleak. First and foremost, the budgeteers have assembled a typical package of measures based on blue smoke and mirrors.

These include asset sales, accelerated revenue collection, improved tax collection techniques and reduced interest rates. Even if the presumed benefits from these measures were all realized (doubtful at best), it's unlikely they will be very helpful to the capital markets.

Moreover, should the U.S. economy slide into a recession next year, spending cuts and revenue increases would go out the window. Federal borrowing requirements would rise sharply.

The Federal Reserve has responded to the pressure to "defend" the dollar (against what was never quite clear) by propping up short-term interest rates. The Fed is keeping rates steady despite

Study Shows Gradual Hikes in Bank Funding for Electronic Services

By JEFFREY KUTLER

NEW ORLEANS — Commercial banks are redeploying assets away from branches and toward electronic delivery systems — but only gradually.

A Bank Administration Institute survey, using data from 117 U.S. banks of all sizes, found that they will increase investments in retail payment and customer-service systems significantly over the next three years.

But a minority of those funds will be spent on electronic technologies such as automated teller machines and point-of-sale terminal networks, according to bankers' projections.

For the average bank, the vast majority of capital spending on delivery systems — roughly 80% to 90%, depending on the bank's size — will remain in brick-and-mortar branch facilities through 1990.

Delivery systems were defined in the survey as branches, ATMs, point-of-sale terminals, and less entrenched technologies such as automatic voice response and home banking.

The survey, based on a detailed questionnaire mailed last spring that took retail bankers more than an hour to complete, revealed that bankers are slowing their ATM investments relative to point-of-sale and the other high-technology alternatives.

The largest banks — with $1 billion or more in assets — expected an average decline in ATM investments of 21%, to $318,000 per institution in 1990. Their POS and higher-tech spending will double or triple, while total delivery system investments rise 20% to an average of $3.2 million.

At midsize banks, between $100 million and $999 million in assets, ATM investments are expected to rise over three years by an average of 65%, to $38,300, while POS and other high-tech investments are predicted to rise more than tenfold. These banks' total delivery system spending is slated to rise to $336,300 per institution in 1990, 37% higher than in 1987.

The Bank Administration Institute, based in Rolling Meadows, Ill., collaborated on the survey with the Boston University School of Management. Some findings were released at the institute's retail delivery systems conference here last week. They will be published next month in a book called "The Future of Retail Banking Delivery Systems."

Investments in Retail Delivery Systems

Big Banks and Automated Systems

The move to greater investments in electronics is most pronounced at large and midsize banks.

By 1990, the $1 billion-asset and larger banks will be devoting an average of 21% of their annual retail delivery system investments to automated systems, up from 19% in 1987.

In dollar terms, the large banks' electronic investments — including the dampening effect of ATM cutbacks — will rise by an average $160,000 or 30% over the three years. This is faster than their anticipated 18% growth in brick-and-mortar investments.

At banks with $100 million to $999 million in assets, the electronic proportion will rise to 16% in 1990 from 10% this year, and the dollars by an average of $30,000, or 121%. That compares with only 27% growth in the brick-and-mortar area. Banks under $100 million in assets showed almost no change in the branch-electronic mix. Although their total delivery system spending is projected to double by 1990, to $100,000 per institution, the same 88% is going toward brick and mortar in both 1987 and 1990.

While the survey seems indicative of industry changes that have shown up in other reports, its small sample relative to the total of 14,000 banks may limit the statistical reliability of the findings.

This is especially true in the under-$100 million category, where only 32 banks participated out of a "universe" of over 12,000.

Service Quality an Issue

While they prepare for a future in which more services are delivered electronically, bankers are growing increasingly concerned about maintaining service quality, the survey said.

As retail services are delivered in an automated, impersonal fashion, it becomes essential to employ educated workers to fill the gaps and respond to consumer complaints and inquiries.

Bankers in the survey said their top employment priorities were to maintain employee morale, institute effective training programs, and retain qualified personnel.

The bankers do not see automation as a means to sizable staff reductions. They do regard a high-quality staff as a competitive asset.

Asked to list competitive priorities in order, the 117 surveyed bankers rated courteous service first with a score of 6.5 on a scale of 1 to 7.

Convenient service, broadened customer relationships, accurate and timely information all scored 5.9 or higher on that scale.

"We cannot automatically assume that staff levels will fall in proportion to automation," said Marjolijn van der Velde, managing director of retail financial services at BAI.

"Automation actually increases inquiries," Ms. van der Velde added. "The number of support staff may have to remain stable, or may even grow over the next few years" to meet the demand for customer service.

Ms. van der Velde said that the proportion of customer inquiries handled by branch tellers and platform representatives will likely fall to 59% in 1990 from 68% today. Many of those inquiries are shifting to ATMs, whose share of the inquiry load will rise to an estimated 15% from 9%.

But calls to the customer service area are seen holding steady, at 16% in 1990 compared with 15% today.

The study said banks that develop a responsive work force "can effectively use these [branch] structures as a focal point for interacting and managing relationships with customers."

Brick-and-mortar facilities thus become more productive and their cost structures less burdensome. The branches become part of an upgraded delivery system that blends people skills with computers.

"Management in the 1990s will have to be more communicative and flexible" if they are to avoid morale problems among customer-contact personnel, the study concluded. ■

NATIONWIDE BANKING: Michigan legislation providing for nationwide interstate banking goes into effect today.

CoreStates Financial Moves into Nationwide Point-of-Sale Business

➙ **Continued from Page 1**

point-of-sale payments. CoreStates offers a complete turnkey package that makes implementation theoretically trouble-free for users like Toledo Trust.

"The turnkey aspect makes a big difference," Mr. Anderson said. "We immunize our banks and merchants from all worry about telecommunications and service.

"We can go anywhere in the country at the drop of a hat, or the drop of a terminal," he said.

Flat Fee for Each Transaction

Access users buy or lease their merchant terminals and pay CoreStates a flat fee per transaction, which the company has not publicly disclosed.

"Access is designed for good-size banks like Toledo Trust that can compete but may not be able to afford the technology," said Jeffrey Connelly, senior vice president and manager of electronic payment services for CoreStates.

"We provide a solution — including terminal leasing, servicing, ongoing support, customer setup — that makes them [banks] competitively strong," Mr. Connelly said.

"We now have the ability to compete for merchant business with a high-quality, cost-effective point-of-sale product line, without having to shoulder the product development cost," said George Russ, vice president of merchant services at Toledo Trust.

Toledo Trust is taking advantage of CoreStates technology to build a business reaching far from its home base.

"Not everybody can participate directly in the technology explosion," Mr. Russ said in an interview this week during the Bank Administration Institute's retail delivery systems conference.

"I want to be in a national market, but I can't get on a plane for Tampa if something suddenly goes wrong down there," he said.

CoreStates, as a regional banking company, prefers to sell the Access service to other regional banks rather than trying to penetrate those markets itself. "Regional banks know their own markets best," Mr. Anderson said.

"CoreStates has defined the service so well that we can drop-ship a terminal to anywhere in the country, and the store people can read the directions and have the terminal connected in a couple of hours," Mr. Russ said.

Toledo Trust has 70 branches in Ohio and 2,500 merchant credit card customers. Access allows the bank for the first time to offer data capture, which speeds the funds-transfer process by replacing paper payment drafts with electronic data communications.

Access also provides on-line card authorizations, debit card acceptance, and check guarantees at the user's option. The network can authorize any combination of debit cards, private-label store cards, and credit cards including American Express, Discover, Diners Club, Carte Blanche, MasterCard, and Visa.

Mr. Russ said Toledo Trust chose a proven system that can enhance the bank's deposit relationships with retailers.

Value-Added Services

Besides transaction processing, Access can deliver what Mr. Russ calls value-added services. These include sales reports, data collection, electronic mail, and cash consolidation reports — cash management services that yield additional fee income to the bank.

"These merchant customers are depositors in our bank, and deposits are the name of the game," Mr. Russ said. "The POS data capture service, which we call Vista Access, is a door-opener to Toledo Trust's existing family of corporate-service products."

Access is an outgrowth of Mac, the ATM network with 2,400 machines serving six million cardholders in Delaware, New Jersey, New York, and Pennsylvania.

Through Mac, CoreStates has been in the ATM/debit card business since 1979. Mac handles 16 million transactions per month for more than 300 financial institutions and is the fifth largest shared ATM network in the country, according to the newsletter *Bank Network News*.

Also in CoreStates' Mac product line is an in-home computer banking service, currently being delivered by seven financial institutions to about 600 consumers.

Toledo Trust is one of four banks outside the Mac network's home territory that will be on the Access point-of-sale system by yearend. Another 10 Mac members are users.

"We'd like to double the total to 28 in 1988," Mr. Connelly said.

Most of the current 5,000 terminals are at petroleum retailing outlets bearing the Sun, Getty, Atlantic, and other brand names.

"We expect to double or triple that number [of terminals] in 1988," Mr. Anderson said.

Most of the 3.5 million monthly point-of-sale transactions now processed by the Mac/Access switch are credit card items, but Mr. Anderson anticipates rapid growth in debit card transactions.

In a related development, Philadelphia National Bank announced this week that it is installing a point-of-sale network linking Texaco jobbers across the United States. In the petroleum industry, jobbers are independent marketers.

The electronic terminals will provide authorization and data capture of transactions made with Texaco, Visa, MasterCard, American Express, and Discover credit cards, and various debit cards.

"The network will benefit consumers by offering faster services and convenience in purchasing," Mr. Connelly said. "And it will benefit Texaco jobbers by providing greater security and efficiency in payment for their products." ■

Peter Cooke, of the Bank of England, who chaired a committee that produced an international proposal on capital adequacy standards. [Page 1]

26 Big Banks Face Need to Raise Equity

What the Central Bankers Are Proposing

By JOHN J. DUFFY
London Bureau

LONDON — The proposed new standards of capital adequacy for international banks released Thursday are modeled closely on the U.S.-British capital accord of February, but the rules go further in several important respects.

The proposals drawn up by central bank representatives of the Group of Ten countries specify what constitutes capital and what minimum capital standards banks are expected to achieve by 1990 and by 1992. The Anglo-American accord shied away from precise figures.

The report, prepared by the so-called Cooke Committee, was unveiled by the Bank for International Settlements, a central bank for central bankers. Under the agreement, international banks in Group of Ten countries would be permitted to count core capital and supplementary capital. Core capital, the more important of the two, would consist of common equity capital and reported reserves. Such capital would have to constitute at least 50% of a bank's total base capital.

Supplementary capital would consist of five general elements:

- Unpublished or "hidden" reserves. Such reserves, which are permitted in West Germany but not allowed in the United States, would count as capital as long as they are passed through the

26 Big Banks: Page 2 ➸

Regulators Seek 4% Minimum Level

By BARBARA A. REHM
and JOHN J. DUFFY

More than two dozen major U.S. banks do not have enough common equity to meet the capital adequacy standards expected to go into effect in 1992, bank analysts say.

Under a compromise plan developed by central bankers from major Western countries and unveiled by U.S. bank regulators on Thursday, banks dealing in international markets would be required to hold 4% of their capital in common equity and disclosed reserves.

Under the plan, minimum capital requirements would be set at 8%, with the additional 4% makeup of capital being determined by regulators in individual countries.

Tiering capital requirements — 4% equity capital and 4% other types of capital — lets individual countries retain their various national accounting and regulatory quirks.

Many of the major U.S. money center banks will have to raise their equity to meet the new capital standards. The banking consulting firm Keefe, Bruyette & Woods Inc. calculated the common equity-to-assets ratios of 197 U.S. banks. These ratios exclude goodwill, which is being dropped as a part of equity under the proposal.

Using June 30 data, the firm found that at 26 banks common equity accounted for less than 4% of total capital. Among those 26 are Manufacturers Hanover Corp., Continental Illinois Corp., BankAmerica Corp., and Citicorp. (See table on page 2.)

Analysts said the new proposals are going to have widely differing effects, depending on the individual country,

Marking to Market

AMONG the most popular of fairy-tale themes is the idea that a curse rests on the man who gets what he asked for. I think that's utter nonsense, but I have been reconsidering my position since the Financial Accounting Standards Board announced it was going to seek to impose mark-to-market procedures on accountants who audit banks.

On the surface, that's good news in two ways. It takes off the backs of the accounting board at least one of the monkeys left there by a resigning member who said the board was adopting rules that favored the providers over the users of audited statements. Mark-to-market accounting, after all, is something the banks don't want at all and the evaluators of banks need very, very badly.

It's been fascinating this year to watch the brokerage houses without exception intensify their buy recommendations on money-center bank stocks as the market has driven them farther and farther down, never thinking that maybe the market knows something the analysts don't.

In the light of events this year, one must worry that the availability of regulatory accounting may be giving us some very misleading numbers. Banks as well as Merrill Lynch were involved with interest-only, principal-only strips of collateralized mortgage securities.

Merrill, having guessed wrong, had to swallow its losses because it was required to mark to market. Banks under regulatory accounting could, and some probably

Marking to Market

Continued from Page 1

did, sell the half that went up in price, booking a profit. They could then continue to carry at one hundred cents on the dollar the half that had sunk into the sea. No way for us'ns to know, now — which is, indeed, why the Securities and Exchange Commission asked the accounting board to invent some rules.

Worse. The upheavals of Oct. 19 must have changed dramatically the values of the interest rate swaps in which many banks had taken positions. There was nothing in regulatory or SEC accounting procedures that compelled banks to mark these positions to market, and one doubts that they did — at least, after the positions began to show a loss.

Indeed, the fact is that in many instances U.S. bank examiners don't know the extent of the contingent liabilities our banks have accepted in their foreign offices so they can play in this business.

AT PRESENT, we know nothing of the letter-of-credit obligations the banks have accepted. John Reed said the other day that Citibank had greatly expanded its loans to the market on Black Monday. No doubt it did — because the specialists and brokers had lines of credit at Citibank for which they had been paying commitment fees, and because the bank had deposited letters of credit in lieu of cash in the margin accounts of the futures and options firms.

Today, letter-of-credit fees drop like manna on the bottom line. But as the Bank of England pointed out a year ago and a number of banks learned with some discomfort in late October, money is a business where nobody gives nobody nothin'. The accounting board rules might help us find out who has nothin' and what he carries it at on his books.

I have no serious doubt that somewhere in these daisy chains of swaps the Aboriginal Bank of Alice Springs has promised to pay fixed-rate deutsche mark in return for floating-rate Swiss franc, and the American bank on the other end of the transaction is blissfully booking profits on it.

A British banker said to me a year or so ago that U.S. banks thought they were going to earn their way out of the Latin debt problem through swaps. What they didn't understand, he said, was that swaps were the Latin debt crisis of the '90s. We need accounting procedures that enable us — maybe, even, enable the banks — to keep track of such things.

It's an important subject. As noted in this column a few weeks ago, mark-to-market accounting that keeps close track of the value of the loan and investment portfolios would allow a more professional Federal Deposit Insurance Corp. than we now have to track the government's risk much more closely. To the extent that portfolios will increasingly be securitized, the fiction that everything is worth par will be increasingly unconvincing to the outside world and should not satisfy an insurer, either.

ONCE THE FDIC can keep track of the fluctuating market values of the banks' assets and can deal dynamically with developing changes, a real risk-related insurance premium (not the joke the incumbent administration of the agency has proposed) can be assessed, and the variety of assets a bank may hold can be increased.

Assume the SEC has full powers to force the maintenance of the capital ratios at an investment banking affiliate, whether the bank regulators like it or not. Assume also that the capital put into the affiliate is real money, not Mickey Mouse from the bank.

Then. significant reform of deposit insurance can indeed lead the way to securities powers for holding companies that have insured depositories as their major subsidiary. Without such reform, of course, it is really impossible to believe that even Congress could be dumb enough to do anything major about Glass-Steagall.

Mark-to-market accounting would also get rid of the "goodwill" items on the asset side of the ledger, which look very silly when stock sells below book value. On the plus side, it would permit the banks to assign a true value to items such as the commercial land and buildings they use, and the operating subsidiaries for which there is a market. Equity would look a lot stronger if banks could carry their older assets at a higher fraction of what they are now worth.

The objection that it's hard to put a value on loans per se is not to be taken very seriously, coming from lenders who are either reasonably expert at this or should find some other line of work. Anyway, the law of large numbers will get you out of this problem easily enough: We don't want to know what the $2,000 surviving piece of a three-year auto loan is worth, just what the portfolio of consumer loans is worth.

We would still have problems with the regulators, who are disgracing themselves abroad these days by insisting that banks alone among commercial enterprises should be permitted to capitalize their bad accounts receivable (also known as "loan-loss reserve") despite the commonsense objection of the German authorities that when your horse makes dung you clean it up yourself. But, of course, if banks had to value the Latin debt at market they wouldn't have any loan-loss reserve left to capitalize, anyway.

ALL THOSE GOOD THINGS. And yet . . . . A bank with too many holdings of low-coupon U.S. instruments will indeed suffer reduced earnings in a high-rate environment. But such holdings are not likely to make the bank insolvent, which is what mark-to-market accounting might indicate.

Even on the question of Latin debt, there are inescapable doubts. Do we really want to send our banks into negotiations with these guys under circumstances where a comment by one of the debtors coming out of the meeting can clobber the market price of the debt, with severe consequences for the creditors?

Still more difficult problems come on the liability side. If we're going to tell a bank that a 9% mortgage must be written down to market in a 12% interest environment, then we can't insist that the two-year $100,000 certificate of deposit at 7.5% is a real $100,000 liability. And we have to find some way to account for what the British call "the endowment,' the transaction balances that pay no interest at all and become increasingly a source of profits when rates rise.

Certainly, something quite different from today's mendacious reporting of the condition and profitability of a bank will some day be required. The important part of the accounting board announcement is that the first step has been taken.

But it's going to be a very long journey. And we're going to need some Cossacks with whips to make sure the big banks stay on the path. ■

Mr. Mayer is the author of "The Bankers" and "The Money Bazaars."

WHAT'S YOUR ANSWER?

Brokerage Liable for Bad Investment Advice

By CHARLES G. DALEY

Can a stock brokerage firm be held liable under the Texas Deceptive Trade Practices Act for giving erroneous tax and investment advice to a customer when it is coupled with other services?

YES. John D. Youngblood was employed by Sherwin-Williams Co. Sherwin-Williams established an approved tax-shelter plan called the Employees Stock Purchase and Savings Plan, a pension plan in which Sherwin-Williams agreed to match, up to a specified percentage, contributions made by an employee into the plan.

The company's contributions to the plan were not taxed to the employee when made, only when withdrawn. The employee contributions came from his or her salary, which had already been taxed, so they were not taxed when withdrawn. Mr. Youngblood had participated in the plan since 1969. His plan held approximately $30,000 in his own contributions and $70,000 in employer contributions in 1982.

In October of that year, Mr. Youngblood contacted Nich Swanson, an E.F. Hutton broker, about the feasibility of removing the entire $100,000 from the plan and investing it in other securities to obtain a higher return.

Mr. Youngblood had been doing business with Mr. Swanson at Hutton since 1981, investing in and selling other securities.

Calling E.F. Hutton's New York office, Mr. Swanson spoke with Karen Badger, a broker in Hutton's Employee Retirement Income Security Act (ERISA) office. Ms. Badger told Mr. Swanson that the contemplated withdrawal, coupled with investing the proceeds in E.F. Hutton's Bond and Income Series, would qualify as a tax-free rollover, with the result that Mr. Youngblood would not incur any tax liability on the transaction.

Mr. Swanson passed this information on to Mr. Youngblood. Accordingly, Mr. Youngblood liquidated his Stock Purchase and Savings Plan and received checks from Sherwin-Williams totaling $100,780.

His contributions, which had already been taxed, totaled $30,364, and his employer's contributions came to $70,415. The sum of $70,415 was invested, pursuant to Mr. Swanson's recommendations, in E.F. Hutton's Bond and Income Series, which was essentially a mutual fund composed of bond investments.

It was this withdrawal that brought about the adverse tax consequences that Hutton had told Mr. Youngblood he would not suffer.

A short time later, Mr. Youngblood referred a coworker to Mr. Swanson for liquidation and rollover of the funds in his plan. Once again, Mr. Swanson called the New York office for advice.

This time he learned from the ERISA department head, Gary Strum, that the transaction did not qualify as a rollover but instead would be taxed. Mr. Swanson testified that when he informed Mr. Youngblood of the news, the Sherwin-Williams employee replied, "That's what the IRS said."

Mr. Youngblood subsequently withdrew the money from the Bond and Income Series and reinvested it in Hutton's Cash Reserve Management Account, a money market type of fund. Mr. Youngblood was required to pay $31,200 in taxes on the $70,415 improperly withdrawn from the plan.

Thereafter, Mr. Youngblood sued E.F. Hutton for damages under the theories of common law negligence and fraud and under the Texas Deceptive Trade Practices Act. The jury found that both parties were negligent: E.F. Hutton was 60% negligent and Youngblood was 40% negligent.

The court rendered judgment against Hutton, and the firm appealed. The Court of Appeals of Texas affirmed the judgment and gave attorney's fees to Mr. Youngblood. ■

THRIFTS & MORTGAGES

AN AMERICAN BANKER WEEKLY FEATURE

Who's News

Crestmont Savings and Loan Association, Edison, N.J., has hired **James J. Childers** as executive vice president and real estate lending division manager. He was previously with First Federal Savings and Loan Association of Rochester, N.Y., as senior vice president and chief lending officer and had earlier served as an executive vice president with the Kissell Co., Springfield, Ohio. At the $1.4 billion-asset Crestmont, Mr. Childers will be responsible for mortgage banking and commercial real estate lending.

James J. Childers

Jeffrey S. Tallackson has joined American Savings Bank, New York, as executive vice president, general counsel, and secretary. He was previously a partner at the New York law firm of Milbank, Tweed, Hadley & McCloy, which he joined 17 years ago.

John Roberds, formerly an arbitrage trader at Merrill Lynch specializing in futures, government securities, and swaps, has joined Franklin Savings Association, Ottawa, Kan., to help with its trading of mortgage-backed securities and related hedging instruments. Mr. Roberds, the third ex-Merrill employee to join the fast-growing thrift since September, is expected to be named a senior vice president.

Darrell W. Meyer has been named senior vice president of loan administration at C.L. Clements Mortgage Co., Miami. Previously a vice president, he has been with the company and its parent, Chase Federal Savings & Loan Association, for seven years.

Newswatch

Convertible ARMs Soar

Convertible adjustable-rate mortgages, which began gaining popularity earlier this year, are now offered by three out of every four mortgage lenders, according to a survey by the Federal Home Loan Mortgage Corp.

The loans, which let borrowers convert to fixed-rate mortgages within certain time periods, were the only adjustable-rate mortgages offered by 21% of the lenders surveyed. Another 55% offered both convertible and nonconvertible ARMs, the survey found. While 30% offered the conversion option at no cost — charging a fee only at conversion — most charged higher initial rates or more origination points.

Michigan Thrift Reaches Pact

D&N Savings Bank, Hancock, Mich., said it reached a temporary agreement with its largest stockholder group to prevent it from acquiring any more shares of the thrift. D&N had filed a lawsuit alleging that the group is planning to take control of the $1.76 billion-asset institution.

Under the agreement, the group — consisting of Southfield, Mich.-based Seligman & Associates Inc. and members of a family that owns 76% of that firm — will refrain from acquiring any more D&N securities either until a preliminary hearing is held or until Jan. 18, whichever comes first. The group has denied it is seeking to take control.

Tennessee Acquisition Planned

First Federal Savings and Loan Association, Chattanooga, Tenn., has reached an agreement to acquire United Federal Savings Bank, Fayetteville, Tenn. Terms were not disclosed. First Federal has assets of $600 million, and United Federal has assets of $18 million.

— Phil Roosevelt

Deposits Soar at Credit Unions

Their Growth Outpaces Savings Institutions' For 4th Year Running

By L. MICHAEL CACACE

NEW YORK

FOR the fourth year in a row, credit unions significantly outpaced savings banks and savings and loans in deposit growth. In the 12 months ended June 30, deposits at credit unions jumped 18.7%, compared with a 2.9% gain at savings institutions. A year earlier, credit union deposits rose 18.2%, while savings institutions had a 5.8% gain.

As a result, credit unions have increased their deposit share. Of the deposits held by savings banks, savings and loans, and credit unions, the latter had a 13.3% share in 1987, up from 9.9% in 1983.

These are some of the findings of the *American Banker's* annual survey of the top 100 credit unions, which reports data as of June 30.

Major reasons for the substantially larger growth in deposits at credit unions were the higher interest rates offered and the capital pressures placed on savings institutions.

According to data from the Credit Union National Association, or CUNA, the average rate on regular savings shares at credit unions was 6.10% at midyear. The rate on money market deposit accounts was 5.71% at savings institutions insured by the Federal Savings and Loan Insurance Corp.

Top 100 Credit Unions Ranked
Pages 14,16

In addition, the thrift industry has been under regulatory pressure to raise capital-to-assets ratios to 3%. One way to boost the ratio is to limit the growth of assets. Because deposits fund assets, institutions striving for smaller asset growth have smaller deposit growth.

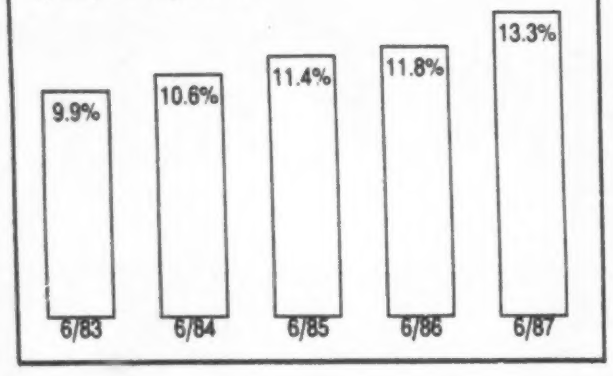
Among the other major findings of the survey:

- The Navy Federal Credit Union, Washington, D.C., remains the top U.S. credit union in total assets, member savings, total capital, number of regular accounts, and individual retirement account deposits. At midyear, Navy Federal had $2.86 billion in assets, up 19% from $2.4 billion the previous year. The institution had $2.58 billion in member savings, up 19% from $2.17 billion, and $191.4 million in capital (all reserves plus undivided earnings), a 27% increase. Its number of regular share accounts was 821,694, an increase of 10.8%. In addition, the Navy credit union had $509.9 million in IRA deposits, up 18.9% from $428.7 million at midyear 1985.

Navy Federal ranked 60th among savings and loans, savings banks, and credit unions in deposits at midyear, up from 69th position a year earlier. Its IRA deposits, however, placed it among the top 25 in this broad group of institutions.

Credit Unions' Share Of Thrift Deposits

6/30/83-6/30-87



- The largest percentage gain in assets among the top 100 credit unions was posted by Pennsylvania State Employees Credit Union, Harrisburg. Its assets rose 53.9%, to $392.9 million from $255.3 million. The Pennsylvania institution moved up 14 places to 28th position among credit unions.

"The marketing effort and a real attractive dividend rate over the period were the main reasons for the gain," a spokesman for the credit union said. From midyear 1986 to midyear 1987, the number of regular share accounts rose 13.3%, to 99,160 from 87,498, and member savings soared 54.4%, to $382.7 million from $247.8 million.

WASHINGTON BRIEFING

Globe-Trotting Regulators Seek Business For US in Asian Nations and Soviet Union

By JIM McTAGUE

WASHINGTON

LAST WEEK, bankers in Hong Kong, Seoul, and Tokyo welcomed Federal Home Loan Bank Board Chairman M. Danny Wall and asked him about stripping.

Here in the nation's capital this week, the Russians invited HUD Secretary Samuel Pierce to hobnob with Mikhail and Raisa. After all, he's been to Moscow more times than Secretary of State George P. Shultz.

As financial life becomes more complicated and global, the lives of regulators are becoming more glamorous. So glamorous, in fact, that they might effectively be served up by tabloids for shoppers caught in checkout counter gridlock. Imagine a headline screaming "Seoul Bankers Want Wall Street Strippers."

Actually, the strippers in question are not of the burlesque show variety. Bankers in Far Eastern capitals last week were wondering why Wall Street firms were not stripping the 30-year bonds being issued by the Financing Corp., or FICO, to recapitalize the Federal Savings and Loan Insurance Corp. M. Danny Wall, chairman of the Federal Home Loan Bank Board, said the question was raised in Seoul and Hong Kong, where investors prefer shorter-term investments.

M. Danny Wall

Mr. Wall, board member Roger Martin, and several other Bank Board people spent last week in Asia hawking the 30-year FICO bonds. The chairman reported Tuesday that the reception was good, especially in Japan, where 180 people attended a function set up for 100.

Mr. Wall added that in Hong Kong, where investors generally prefer bonds that mature on or before 1997 (the year the crown colony is repatriated to China), bankers "took down a bundle of the last $600 million FICO bond issue."

Wall Street has given some thought to stripping the Financing Corp. bonds, but Scott Sorenson, a spokesman for Goldman, Sachs & Co., said the time is not ripe for a firm to do it now. The reason? Skittish investors, worried about the viability of the savings and loan industry, would demand too high a yield to take down interest rate strips representing the longest end of the investment.

S&Ls are paying the debt service on the bonds in the form of higher assessments to the FSLIC.

On the other hand, Mr. Sorenson said, the portion of the stripped bonds representing principal payments could be priced aggressively by Wall Street firms, because the principal is fully collateralized.

"Strip the bonds? It's not impossible, but it's probably not economical now," he said.

Mr. Wall said Japanese investors

Credit Unions Report 18.7% Growth in Deposits

➙ **Continued from Page 8**

• Progressive Consumers Federal Credit Union, Malden, Mass. — whose 64% gain in assets last year was the largest among the top 100 credit unions — had the second largest gain in assets this year. Its assets rose 45%, to $316.1 million on June 30, from $217.8 million a year earlier. Progressive moved up 20 places to be ranked the 42d largest credit union.

Over the past two years, Progressive has been the fastest-growing credit union in the top 100. From midyear 1985 to midyear 1987, its assets have soared 138%, and Progressive has advanced 65 places in rank. A spokesman for the credit union said, "Basically the growth is due to an aggressive campaign to attract CDs, which are used to finance mortgage lending."

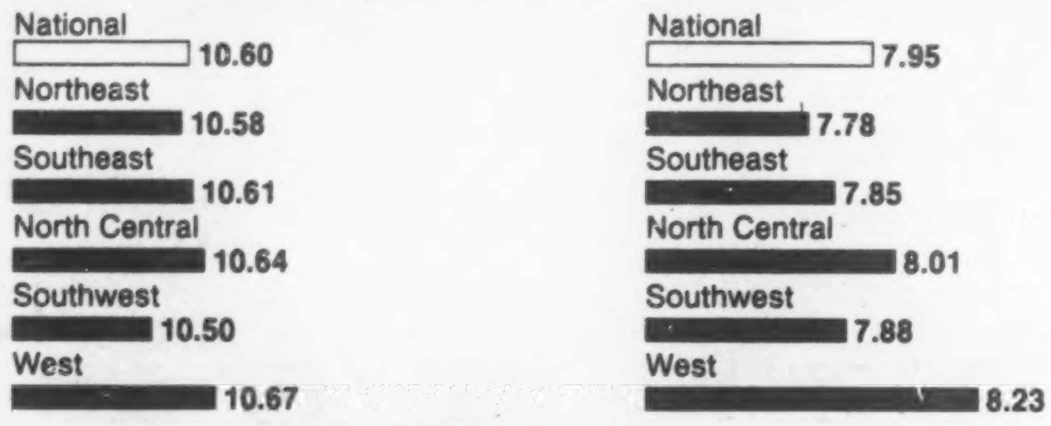
• Among the top 100 credit unions, the $204.7 million-asset Melrose Credit Union, Queens, N.Y., had the highest capital-to-assets ratio, 17.9%.

Melrose, which is ranked 89th, is a community credit union making loans of all types, including loans to finance medallion taxicabs. It had total capital — reserves plus undivided profits — of $36.6 million on June 30, up 0.5% from $36.4 million a year earlier, when its capital-to-assets ratio was 21.8%.

• Orange County Teachers Credit Union, Santa Ana, Calif., which ranked 17th in assets with $506 million, had the second best capital-to-assets ratio among the top 100 credit unions, at 13.4%. In addition, Orange County Teachers is the second largest credit union in capital with $68 million on June 30.

• The average capital ratio for the top 100 credit unions was 5.46% on June 30, up 36 basis points from 5.10% a year earlier. ■

Mortgage Database



Mortgage data for the week ended Dec. 4 provided by Federal Home Loan Mortgage Corp. Fixed-rate mortgages are 80% loan-to-value conventional 30-year mortgages. Adjustable-rate mortgages are one-year Treasury indexed conventional 30-year mortgages.

Selected Interest Rates

6-Month Treasury Bills	6.12%
1-Year Treasury Bills	7.02%
3-Year Treasury Notes	8.04%
5-Year Treasury Notes	8.40%

Average rates for the week ended Dec. 4 compiled by the Federal Reserve Board.

Connecticut Institution Becomes Central Bank

MERIDEN, Conn. — The Central Bank for Savings, the wholly owned subsidiary of Cenvest Inc., has changed its name to Central Bank.

"This change merely brings our corporate name into conformity with what has become in common usage our trade or service mark," said James H. Doak Jr., chairman and chief executive officer of Central Bank and Cenvest. "Second, we have now made a commitment to expand our commercial banking posture." ■

Thrift in Pennsylvania Adds Mortgage Units

JOHNSTOWN, Pa. — Johnstown Savings Bank has completed its acquisition of the residential loan origination and servicing divisions of Standard Mortgage Corp. of Georgia.

Johnstown Savings Bank, based here, will continue to operate the acquired divisions under the name of Standard Mortgage Corp., which is based in Atlanta. Standard Mortgage's commercial real estate division will change its name to Shoptaw-James Inc. and will continue business under existing management. ■

You can always tell who sells his mortgages to The Travelers

Confidence shows when your mortgage needs are handled by The Travelers Mortgage Services, delivering the loan programs you require with the speed and efficiency you expect.

Rely on The Travelers for the experience and the resources of a company with a national reputation for providing personalized service backed by consistent underwriting guidelines, prompt funding and competitive pricing.

Trust The Travelers to deliver that competitive edge in the mortgage marketplace. We're confident the results will be plainly visible.

For a detailed information kit, call 1-800-526-4495.

Data Sources: Primary source of data is American Banker survey qustionnaire sent to the top 180 credit unions in the nation. For credit unions not responding to the survey, data from **Callahan & Associates, Inc., Washington, D.C. and the National Credit Union Administration, Washington, D.C.**, were used. **Please note:** the listing excludes corporate central federal credit unions and state central credit unions. **Charter-Insurance Type:** 1= Federally-chartered credit union (FCU), which is NCUA-insured. 2= State-chartered NCUA-insured. 3=State-chartered state (agency) insured. 4=Noninsured. 5=Privately insured. **Member Savings:** Includes share capital, share drafts, deposits, and investment certificates. **Total Capital:** The sum of reserves plus undivided earnings. **Ratio of Capital to Assets:** Total capital divided by total assets, expressed as a percent. (r)— Based on revised data from the NCUA. Rank credit union would have had, if the revised data were used. N.A.-Not available. ( )— Negative. (†)— The June 30, 1986 assets are for the top 100 credit unions on that date.

Summary of Survey Findings

Confidence Rises in US Banking System

But Public Won't Abandon Stock Market

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Public confidence in the safety and security of the U.S. banking system appears to be at its highest level in recent years, according to a national opinion survey by the *American Banker.*

The poll's results indicate that the public is not linking the banking system to the problems on Wall Street resulting from the October stock market crash.

Consumer Survey

In a telephone survey of 1,000 consumers conducted between Nov. 10 and Dec. 16, 45% of the respondents said they have "a great deal" of confidence in the safety and security of the U.S. banking system. That is a dramatic increase from the previous survey conducted during May and June of 1987, when just 34% of the public expressed such confidence in the system.

The 45% figure also is the highest recorded in five consumer opinion surveys by this newspaper dating back to 1984. The previous high was 38% set in the spring of 1986.

The latest survey was conducted by Trans Data Corp., a Salisbury, Md., research affiliate of the *American Banker.*

The study was intended to gauge consumer attitudes toward saving and investment in the wake of the Oct. 19 crash. It also sought to determine whether the stock market crisis affected public confidence in the banking system and to discern consumer attitudes toward bank involvement in different fields, such as the securities business.

While confidence in the banking system is high, the survey shows that the public is not abandoning Wall Street, nor is it clamoring for banks to expand into the securities business.

Few Report Selling Stocks

The survey reports that only 6% of the 335 respondents who had money invested in Wall Street before October sold or redeemed shares after the crash. And 16 of that small group of 20 sellers, or 80%, said they plan to reinvest in stocks or stock mutual funds.

Similar to the spring *American Banker* survey, the latest poll shows no consensus as to whether banks should be involved in securities, real estate, and insurance sales.

"There is no groundswell of consumers saying, 'Wall Street's not doing a good job, let bankers handle this,' " said Mary Donadoni, a research associate with Trans Data Corp.

"It may be that confidence is placed in the banking industry doing what it does best, which is banking," she said. "It may be precisely because banks are not heavily involved in the securities business that consumers feel such a great deal of confidence at this time."

BANKING TRENDS

A Few Words to the Wise for Some Thrifts Eying Increased Size

By DR. PAUL S. NADLER

IF I WERE ASKED to give advice to a banker or thrift executive at the start of 1988, I would harken back to George Plimpton's advice to the Harvard seniors in his Class Day address of 1977:

"I have been led to understand that tomorrow you are going to graduate. Well, my strong recommendation is that you don't go. Stop. Go back to your rooms. Unpack. There is not much out here."

With regard to most thrifts and some banks too, my advice is similar: Don't grow. The problems all come when you try to get larger.

One can always understand why financial institutions like to grow. There is a fine ego advantage when you are bigger than the next bank or grow more rapidly than it does.

And the fact that all of us like to compare our size with that of other institutions is recognized in the excitement that growing banks and thrifts exhibit as they await the *American Banker's* periodic array of the top institutions by size.

Growth is not only a sign of achievement that is easy to display, but it also means in the minds of many that you are serving your community.

Nadler Says:

In the long run, the best decision that the management can make for the community, the employees, and the stockholders is to ensure the institution's survival. And this does not always mean growth.

But growth has other advantages. The larger you are, by tradition the higher the salaries you can pay. This is especially true for mutual organizations.

Growth is also important for morale. The faster you grow, the more opportunities people have to be promoted and given greater challenges. Conversely the job of keeping up morale in a static or declining organization is tremendous.

The Downside

But growth has its drawbacks.

Look at the banks in trouble with their Third World loans. Why were they out there in the first place? In many cases it was simply that a bank had no place left to grow at home, so it started an international department and established branches to show it was progressive.

And once you have people in a country, they must make loans to justify their salaries whether they feel in their hearts that there are real opportunities to make solid loans or not.

That happens domestically as well. The banks that left their home territory and decided to grow by invading the oil patch or otherwise diversifying where they didn't know the people or the territory are the ones that have had the most staggering problems.

For the thrifts in particular there is a real irony in the recent efforts at generating a growth environment by going public.

As thrifts tried to raise capital to back growth, they went the route of giving up their mutuality and selling stock.

Going public offered the added advantage of giving the board members, the officers, and the depositors a chance to "get rich quick" by offering shares that gave investors a piece of a capital position that in some instances had been slowly built up over more than a century.

Going public to finance growth looked like a cinch — for it was the only type of financing operation in which there was nobody on the other side. Both the underwriter and the buyers had a vested interest in keeping the conversion price low — the underwriter so the issue could go up rapidly and make him look good and the buyers so they could get a quick capital gain.

Normally the seller wants a high price. But in a mutual conversion, who is the seller? It is the mutual organization itself — but no actual individuals have a stake in ensuring the organization gets a good price for its stock. All are on the other side of keeping the price low.

So the mutuals that wanted to grow sold stock. Then Black Monday pushed many of these stocks well below the offering price. The result: The boards, the officers, and the public got burned. And the savers who had taken their money out of safe savings deposits found themselves with an investment worth less than what they paid for it, and they no longer received the regular interest returns they had formerly received.

How much better it would have been not to grow!

When More Means Less

Two other reasons show why growth is not so great for a financial institution today.

First, there is a question of what to do with the money once you have built up deposits. Loan demands are not that strong, so the lender must either sacrifice quality or yield to get more loans on the books.

Second, in many areas of the nation — notably New England and the Mid-Atlantic states, the people needed to staff the bank as it grows just are not available.

This columnist recently heard of sav-

OVERVIEW

The Lone Ranger Rides to the Rescue in Mexico

By H. ERICH HEINEMANN

THE U.S. Treasury and Morgan Bank came galloping through the pass just before the new year — pinstripes flapping in the breeze — to rescue the Mexican government from the fruits of its own folly.

The Treasury will sell some special zero coupon bonds to the Mexicans. In turn, the Mexicans will use the bonds as collateral to secure the principal (but not the interest) of bonds that Mexico will offer to swap for some of its outstanding debt.

The Morgan bankers will auction these bonds in exchange for Mexican loans that they and other bankers now hold at some fraction of face value. Poof! Part of Mexico's debt will disappear.

How much of the debt vanishes will depend on the bidding. Bankers will get a fairly good asset to replace a very bad one. The United States, which needs every dollar it can lay its hands on, will be able borrow at a favorable rate.

The Mexicans — who obviously have plenty of money to lend — will live happily ever after. The only details in doubt in this fascinating scenario are the character assignments. Is the Treasury to play the Lone Ranger and the Morgan Bank to play Tonto — or is it the other way around?

Sarcastic remarks aside, the financial engineers deserve full credit for a difficult job well done, having designed the elaborate scheme for Mexico (and potentially other heavily indebted nations) to swap outstanding loans for bonds partially backed by the U.S. Treasury. The complex shuffling of paper between the Mexican government, the Treasury, and the banks undoubtedly will produce substantial benefits for all involved. As one Morgan banker put it, "Everybody gives up something, and everybody gets something."

Heinemann Says:

Mexico must not fritter away the time that it will buy under the Morgan plan. Inflation must be controlled. Capital flight must end.

Mexico will improve its cash flow and may save up to $18 billion in interest payments over the next 20 years. However, the country will lose the value of the compounded return that it otherwise could have earned on the $2 billion that it will have to invest in zero coupon U.S. Treasuries. Indigenous investment in productive facilities would normally produce a far higher return than Mexico must pay on its bank debt.

The major banks will be able to put a limit on their losses on Third World loans. Secretary of the Treasury James A. Baker 3d, whose original plan to solve the debt crisis was moribund shortly after it was announced three years ago, can refurbish his reputation as a forceful and innovative financial statesman.

What will *not* change, however, are the underlying economic realities. The heavily indebted nations of the Third World desperately need an infusion of real capital resources to enhance their development and raise living standards.

Instead, capital is now flowing from the developing countries in the South, which are generally very poor, to the industrial countries in the North, which are generally very rich. The Morgan scheme does not address this issue. Under some circumstances (say, very high inflation in the United States), the plan could make the problem worse.

It makes no sense for the U.S. Treasury to extend credit (directly or indirectly) to other nations. The United States is itself the largest debtor country — borrowing more than $3 billion per week just to pay for its current imports. The last thing Mr. Baker wants to do is to lend money to the lesser-developed countries (no matter how deserving the case) only to turn around and borrow still more from Japan.

In fairness, the Morgan scheme does not involve an extension of credit by the United States. In the short run, the flow of funds will be to Washington, not away from it. Down the road, however, the door may have been open for demands that the Treasury back Third World credits.

Overview: Page 5 ➜

Public Confidence Rises in US Banking System

Continued from Page 1

The national survey of selected 1,000 consumers at random and has a margin of error of plus or minus three percentage points.

Overall, 86% of those surveyed said they have either "some" or "a great deal" of confidence in the safety and security of the banking system. That is almost identical to the combined confidence level expressed in previous surveys.

The relative calm within the banking industry in the aftermath of the crash and publicity about federal deposit insurance contributed to the public's faith in the system, analysts said in interviews. Those conditions contrast with the environment of the previous survey, when only a third expressed a great deal of confidence in the banking system. At that time, there was negative publicity about foreign loan writeoffs, farm bank problems, and thrift industry woes.

The latest survey also shows a surge in confidence in the banking system among affluent Americans. Of those with annual household incomes of $50,000 or more, 54% said they have a great deal of confidence in the system, up from 35% in the previous survey.

Financial industry observers said that upper-income Americans are more likely than the general public to follow current affairs and to know the distinctions between the problems of banks and the problems of other financial services firms. But observers also said they doubted a high level of confidence in the system would cause affluent Americans to use more banking products.

When asked if banks should be allowed to be involved in the securities business — without specifying the activities — 39% said yes, 41% said no, and 20% said they weren't sure. This was the first time the question was posed to consumers in an *American Banker* survey.

Similar reactions were recorded to a more general question about expanded bank powers in the spring survey. That question asked whether banks should be permitted to expand into financial services areas where they have been prohibited, such as insurance sales and real estate sales. Last spring, 41% said banks should be permitted into these fields.

The new survey may indicate slightly more uncertainty toward bank expansion. In the most recent poll, 37% said banks should be allowed this expansion. Also, 19% said they were uncertain whether banks should be allowed to offer new services such as insurance and real estate, compared with 10% in the spring.

More Uncertainty Over New Powers

Q: Should banks be permitted to offer financial services that they have not been permitted to offer in the past, such as selling insurance and real estate?

	May-June '87	Nov.-Dec. '87
Yes	41%	37%
No	49	45
Unsure	10	19

Total exceeds 100% due to rounding

Source: American Banker survey

There appears to be little distinction among various income groups over whether banks should be permitted to expand into insurance sales, real estate sales, and other new financial services. But upper-income consumers appear less eager for deregulation than they were before the stock market troubles.

In the most recent report, 37% of the 160 upper-income Americans surveyed said banks should be allowed to expand into these fields. Last spring, 47% of the 183 respondents from the $50,000-plus households said banks should be permitted into these fields.

Observers warned in interviews that findings about expanded banking powers are difficult to interpret, in part because the typical consumer has not given much thought to the complex issue.

"The comfortable position for the average American — when you're talking about new business or new powers or a change in the way they might have to do their own business — is to oppose change," said Justin L. Moran, a banking consultant in Ann Arbor, Mich. "With a question like this over the phone, where someone has 10 or 15 seconds to formulate a response, you're always going to get what I call a safe response. A safe response is, don't rock the boat, therefore, oppose it."

But others say the survey results may show a basic conservatism in the country regarding banks and bank expansion into new areas, especially after the stock market crisis.

"This could indicate a feeling that banks aren't going to be able to do any better" than the stockbrokers and others who had failed to warn the public of the crash and failed to select better investments, added Irving Leveson, senior vice president and research director for Hudson Strategy Group business consultants in New York, a subsidiary of Marsh & McLennan, an insurance concern.

Banks and Thrift Considered Safer

The recent survey shows that 24% of the public considers banks and thrifts to be better places to keep their money than before the stock market debacle. More than half said they had not changed their opinion, and 10% said they did not know if they had changed their minds. Another 10% said banks and thrifts were a worse place to do business since the stock market decline.

Financial industry observers said the October crash and the persistent volatility may have sensitized more consumers to the idea that principal is protected in bank or thrift deposits, but not in stock market investments.

"I think that 24% [those who consider banks and thrifts a more favorable place for their money] will continue to grow as market volatility continues and as uncertainties in the economic outlook exist," said Charles H. Pistor Jr., chairman of RepublicBank Dallas and president of the American Bankers Association.

He adds that while the survey may show only small numbers of investors taking money out of the stock market, large numbers of consumers will deposit money in banks and thrifts that otherwise might go into a variety of investments. "I can't look at the dollars downstairs and know where they're coming from," he said, "but I know there's a bunch more of them." ■

Settlements Bank Reports Drop in Nonmember Loans

Continued from Page 15

In current-dollar terms, member banks' claims on OPEC countries increased by $500 million in the first six months, but if the figures are adjusted to the falling dollar, there was in fact a decline of $1.4 billion. The same pattern was evident in lending to African and non-OPEC Middle Eastern countries — although the statistics showed a rise in claims of $400 million in current dollars; in fact there was zero growth once the dollar had been adjusted downward.

In Latin America, Argentina and Mexico borrowed more $800 million and $100 million respectively. There was a $1 billion decline in claims against Brazil, but this was offset by a sharp rise in short-term claims on that country as a result of nonpayment of interest. ■

COMMENT

Risk and Stock Performance

By SANFORD ROSE

It has been argued that the single most important determinant of bank stock performance is the current return on equity. That is, in setting the stock price, investors are said to place inordinate weight on currently reported accounting returns and, lacking the necessary information, do not appropriately capitalize the future stream of properly measured cash flows.

Otherwise stated, investors tend to assume that current ROE is a good proxy for future ROE. They do not — some say cannot — make an adequate effort to estimate the riskiness of the stream of expected future cash flows.

One who disagrees with this model of stock-price determination is John "Mac" McQuown, president of Dimensional Corporate Finance of San Francisco. Mr. McQuown feels that investors are, by and large, a canny lot. Despite manifold difficulties, they routinely penetrate the veil of accounting results in order to look to the riskiness of future earnings.

Bank Loans Expected to Play Major Role In Financing Leveraged Buyouts in 1988

By DAVID NEUSTADT

CORPORATE FINANCE
AN AMERICAN BANKER WEEKLY FEATURE

NEW YORK — While the crash on Wall Street set back the market for leveraged buyouts, the pace of deals is expected to pick up again this year.

But players are likely to be more cautious — and that might be good news for commercial banks.

Bank loans are likely to play a bigger role in future deals, replacing junk bond financing, which was tarnished by the crash.

"Today, bank debt is a very attractive form of debt for financing leveraged buyouts," said William Conway, a managing director of the Carlyle Group, a Washington-based buyout firm.

Although the crash has hurt some players and helped others, it has not ended the game. If anything, buyouts may be more appealing now.

Before the Oct. 19 crash, the buyout market was hitting a frenzied peak. Prices had gotten out of hand, and financings were pushing the limits of credibility and creditworthiness.

"Everyone has been very transaction oriented, which is O.K. in an expanding environment," said Ronald Dubin, chairman of Dubin Clark & Co., a Greenwich, Conn.-based buyout firm. "They spent more time analyzing getting the deal done than analyzing the company they were buying. One of the good things that will come out of Oct.

1987 Closings Fall Just Below Grim Forecast

Shuttering of 184 Banks Sets Another FDIC Record

By BARBARA A. REHM
and JIM McTAGUE
Washington Bureau

REVIEW
PREVIEW
1987-88

WASHINGTON — It wasn't as bad as predicted, but that's about the only good thing that can be said of bank failures in 1987.

With 184 banks shutting their doors and another 19 kept open only by federal assistance, a post-Depression record was set. The forecast for 1987 had been 200 failures.

The record of bank closings established in 1937 stood unchallenged until 1984, when 79 banks folded. Since then, the Federal Deposit Insurance Corp. has become accustomed to chalking up record bank closings. Annual records were set in 1985, when 120 banks failed, and in 1986, when 138 banks failed.

Nor is the FDIC forecasting less red ink for 1988. Another record may be set this year, according to the federal agency that insures banks.

List of Bank and Thrift Failures
Page 20

Only a few months ago, the FDIC was predicting a 25% decrease in the number of bank failures this year. But the stock market tumble on Oct. 19 and the ensuing fears of a recession seem to have forced the agency to reexamine its economic assumptions. No one at the FDIC would be surprised by 200 failures this year.

IN THE NEWS

NCNB Writes Off Loans

CHARLOTTE, N.C. — NCNB Corp. said it wrote off $60 million of loans to Mexico in the fourth quarter and added another $60 million to its loan-loss reserve to cover other Mexican loans. The aftertax bite from the move will be $36 million, or 44 cents per share. NCNB said the chargeoff represents a 56% discount of its $107 million portfolio of Mexican loans. NCNB indicated its fourth-quarter earnings will be $12 million to $15 million. The bank projected 1987 profits of $164 million to $167 million, or $2 to $2.03 a share, compared to 1986 earnings of $199 million, or $2.53 a share.

BankAmerica Sells Swiss Unit

SAN FRANCISCO — BankAmerica Corp. said it expects to realize a $70 million pretax gain in the fourth quarter of 1987 from the sale of its 41% interest in U.O.B. Holding SA, the parent of Geneva-based United Overseas Bank. The unit was purchased by Dresdener Bank AG and Banque Nationale de Paris SA, BankAmerica's partners in the Swiss holding company. The price and terms of the deal were not disclosed.

Fleet Completes Merger

PROVIDENCE, R.I. — The $1.05 billion interstate merger of Fleet Financial Group, Providence, and Norstar Bancorp, Albany, N.Y., was completed on Jan. 1, creating a $24 billion-asset holding company. The combined company is known as Fleet/Norstar Financial Group Inc. and ranks No. 22 in the U.S., based on Sept. 30, 1987, asset figures. In a related development, Standard and Poor's Corp. raised its ratings on the combined firms' debt because of the merger.

Senate Plans Crash Probe

WASHINGTON — The Senate Banking Committee plans to hold hearings on the Oct. 19 stock market crash during the first week of February, according to a committee staffer. The committee has not finished lining up witnesses, the staff member said.

Factoring Unit Transferred

NEW YORK — Citizens and Southern National Bank, Atlanta, completed its acquisition of Chemical Bank's factoring unit on Dec. 31 for about $30 million in cash, the two banks said. Including this transaction, Citizens and Southern is the country's third largest factor, with 1987 sales of $4.2 billion. The Chemical unit handled factored sales of about $2 billion annually.

St. Louis Bank Cuts Prime

ST. LOUIS — Southwest Bank of St. Louis said on Monday it would cut its prime rate to 8.5% from 8.75%. Nationwide, the last round of cuts in the prime came Nov. 6, when the base lending rate was cut to 8.75% from 9%. By late Monday afternoon, no major banks had followed Southwest Bank's example.

Lincoln Savings Converted

NEW YORK — Unicorp American Corp. said it had completed its $150 million acquisition of New York City-based Lincoln Savings Bank and had converted the bank to the stock form of ownership.

Failures of FDIC-Insured Banks Since the Agency's Birth

Source: Federal Deposit Insurance Corp.

Tally of Bank Failures Not as Bad as Predicted

➸ Continued from Page 1

The FDIC does not expect ever again to see the days of a mere 10 failures a year, as happened as recently as 1981. David C. Cooke, deputy to the FDIC's chairman, said in a speech last October that if closings can be held to 40 annually, the FDIC will be satisfied.

> The stock market tumble on Oct. 19 and the ensuing fears of a recession seem to have forced the Federal Deposit Insurance Corp. to reexamine its economic assumptions.

Conditions in the thrift industry weren't any brighter last year and aren't expected to get better in 1988.

The Federal Home Loan Bank Board has about 400 insolvent savings and loans on its hands. The Bank Board intends to resolve a minimum of one case a week in 1988, compared to 47 case resolutions in 1987 and 28 in 1986.

The resolutions include the 31 troubled institutions that were either merged or sold with assistance from the Federal Savings and Loan Insurance Corp. and the 16 that were closed. Another 24 thrifts were placed in the Bank Board's management consignment program, where professionals are hired to nurse the institutions back to health.

In the farm credit arena, the agriculture business is improving — and that's good news for the FDIC. Farm banks should continue to constitute fewer bank failures. In 1987, 55 agriculture banks gave up the ghost, slightly less than the 59 farm banks that fell in 1986 and the 62 that died in 1985.

Federal agencies provided more cash assistance to prevent banks from folding in 1987. The number of endangered banks that received FDIC assistance to remain open last year hit 19, up from seven in 1986, and four in 1985.

The FDIC also employed for the first — and so far only — time its "bridge bank" authority on Oct. 30 when it took control of Capital Bank & Trust Co. in Baton Rouge, La., an ailing bank with $372 million in assets. The FDIC obtained congressional approval last August to take over and operate a failing bank — serving as a bridge — until a buyer can be found or some other remedy devised.

It is unclear if this bridge bank approach will be used more or on larger banks in 1988. But the FDIC claims merely having the option increases its bargaining leverage when negotiating bank takeovers.

The average asset size of the banks that failed in 1987 was $37.6 million, down from $53 million in 1986, according to John J. Quinn, in the FDIC's research department.

Bank failures continued to hit some parts of the country worse than others. In 23 states, no bank failures or assistance deals took place last year. Texas had more failures, 50, and assistance deals, 13, than any other state. In 1986, Texas had 26 closings.

If closings and assistance in Colorado, California, Louisiana, Kansas, and Oklahoma are added to the Texas massacre, the tally hits 128. Thus, 63% of all bank closings or assistance deals occurred in southwestern states. The FDIC attributes this region's problems to nonperforming loans for energy, real estate, and agriculture.

By comparison, only 11 banks failed in the 22 states east of a line drawn from Michigan to Alabama.

The Southwest also continues to cause problems for the Bank Board, which embarked on a program aimed at merging several smaller insolvent institutions with bigger, healthier S&Ls there. The Bank Board expects that the new entities, supported by infusions of cash from the FSLIC, will become profitable in two to three years.

The FSLIC, for its part, will take equity positions in the new companies so it can share in any future profits. The first merger of this type took place Dec. 31 in Louisiana.

The problem bank list expanded in 1987, peaking at 1,635 and ending the year at 1,575. At yearend 1986, the problem bank list was 1,484, or 10% of the approximately 14,800 banks insured by the FDIC. Back in 1982, the FDIC problem list totaled 369 or 2.5% of the insured banks. ■

Delay Seen in Committee Vote on New Powers

By ROBERT M. GARSSON

Washington Bureau

WASHINGTON — The Senate Banking Committee will not vote on new powers legislation until the third week of February, staffers say, less than two weeks before the moratorium on new bank powers is to expire.

The committee has not announced a new markup date, but a number of staffers acknowledged that the scheduled Jan. 27 date will not be met. They cite Feb. 17 as the most likely day for a vote.

"I'm almost certain it will be the third week of February," said one staff member.

Virtually no one who follows banking legislation had expected Congress to act on new powers before the moratorium expires on March 1, even though the restrictions were intended to give Congress time to consider how to restructure the financial services industry.

With the delay, it is unlikely that legislation will even make it to a Senate floor vote before March.

The House Banking Committee also is expected to consider new powers legislation in February. Committee Chairman Fernand J. St Germain, D-R.I., has put his staff to work on a draft bill, or committee print, which he said will serve as a markup vehicle.

Mr. St Germain has not provided details of the bill, but his legislation is expected to authorize limited new securities powers while setting restrictions on insurance and real estate activities. Mr. St Germain also has promised new consumer legislation, which could include lifeline consumer accounts for the poor.

A number of other bills probably will be considered by the committee at the same time. The most recent entry was unveiled Dec. 21 by Rep. Tom Ridge, R-Pa., and Rep. Paul Kanjorski, D-Pa. Their bill would permit banks to underwrite commercial paper, mutual funds, municipal revenue bonds, asset-backed securities, and long-term corporate debt.

Meanwhile, Rep. Charles E. Schumer is still pondering whether to sponsor a bill of his own. Mr. Schumer's bill, if introduced, probably would include only a few powers and contain consumer legislation opposed by the banking industry.

Observers also expect it would close a loophole in Section 20 of the Glass-Steagall Act, which the Federal Reserve Board has used to approve 11 banking applications for limited securities underwriting affiliates. ■

Panel: No Manipulation in Trading of Futures

WASHINGTON — The Commodity Futures Trading Commission said that it found no evidence of manipulation in trading of the Chicago Board of Trade's "major market maxi futures contract" on Oct. 20, the day after the stock market crash.

The regulator studied trading between 11 a.m. and 12:30 p.m., Central Standard Time, which includes the period when other index futures exchanges were closed and the index rallied about 80 points.

Several observers have charged that trading by a few large firms in the index on the day following Black Monday helped boost the market. The commission's trading and market division found that the most active traders in the period studied sold more often than they bought and that they were not trading on behalf of proprietary accounts of clearing members. ■

COMMENT

➜ Continued from Page 1

Indeed, argues Mr. McQuown with some vehemence, the chief determinant of stock price performance is not income, but risk — in particular asset risk, as measured by the variability of domestic commercial and industrial loan losses.

To demonstrate this point, Mr. McQuown and his colleagues have done a considerable amount of empirical work — in the form of reams of carefully constructed regressions. Initially, they correlated stock performance in the years 1982 through 1986, as measured by the raw percentage change in prices, with domestic asset risk, as measured by the standard deviation of gross commercial and industrial loan losses. They found a strong and extremely significant relationship for a sample of 49 of the largest banks — that is, banks with lower asset risk had better price performance and those with greater asset risk had poorer performance.

Alpha, Not Beta

But, of course, such results can be misleading. In order to compare stock returns, one must factor out the impact of each bank's systematic risk, or its beta. For example, a bank with substantially greater leverage than its peers tends to be more exposed to macroeconomic changes, and movements in its stock price may therefore by more related to general economic vicissitudes than to its individual asset risk, which is mostly of the unsystematic or avoidable variety — i.e., it can be reduced through diversification.

What the Dimensional analysts did was to filter out the effect of betas as well as that of general market movements, as measured by the change in the performance in the S&P 500, in order to arrive at what is called an alpha. This is a bank's stock price performance net of the market return and its own systematic or unavoidable risk.

Thus an alpha of 2% means that the bank's stock did two percentage points better per year than one would have expected based on the market's overall performance and the systematic risk of the institution itself. Alpha is therefore that portion of the stock price movement over which bank managements have some substantial degree of control.

Dimensional found a strong and statistically significant inverse relationship between the asset risk of the 49 banks, as measured once again by the standard deviation or variability of gross domestic commercial loan losses, and their alphas.

Adding Variables

To determine whether this is a causal relationship rather than a mere correlation, Dimensional added a number of other variables to the regression exercise. Including a variable for asset size did not change the conclusion; size had a negligible impact on alpha, while the very strong negative relationship between asset risk and alpha persisted.

Next Dimensional plugged in a variable for foreign exposure — the ratio of foreign loans to the total assets of the bank. This had some impact on alpha, but its inclusion did not diminish the overpowering link between domestic asset risk and stock performance.

Then the analysts introduced a leverage variable — the ratio of equity to assets (actually the reciprocal of leverage). Reasoning that the impact of leverage is captured in a bank's beta, or systematic risk, Dimensional did not anticipate that it would have much of an effect on alpha, from which the influence of systematic risk has been purged. And indeed it didn't.

Since leverage multiplied by the return on assets equals the return on equity, it is unlikely that there is anything in ROE that is not also captured in ROA. So Dimensional concentrated on regressing ROA against alpha.

In regressions in which ROA was included, but the domestic asset risk variable was excluded, ROA had a very significant impact on stock performance. But that's because ROA already encompasses risk — that is, the higher the level of losses, the lower the ROA.

Insignificant ROA

However, when the risk variable — the standard deviation of losses — is explicitly introduced, the influence of ROA on alpha declines sharply. *Indeed, ROA actually becomes statistically insignificant (anemic values for t and F). But the domestic asset risk variable remains highly significant — in fact, at least six times more significant than the income variable.*

Based on the results of these regressions, Mr. McQuown concludes that large banks suffer more from a risk than a spread problem. Banks that move downstream to cultivate middle-market customers may succeed in increasing nominal returns, but usually only at the price of assuming much greater asset risk.

And the evidence indicates that the marketplace will pay far more attention to this augmented risk than it will to temporarily higher portfolio returns. As a result, the bank's stock performance is very unlikely to improve. Downscaling, the preferred lending strategy of most money center and large regional banks, would seem to be a misguided endeavor.

The Primary Concern

To be sure, if a bank can find a way of raising income without a commensurate increase in risk, its stock price will unquestionably move up. But that is hardly a realistic scenario.

In any event, says Mr. McQuown, the elusive search for a free lunch — income without risk — seems like a second-order concern when a bank can act immediately to reduce portfolio risks through better diversification.

By participating in loan pools that enable it to lend to a broader segment of the population of borrowers in any given risk class, a bank can potentially reduce the standard deviation of its loan losses. According to Dimensional's calculations, an institution that lowered the standard deviation, or loan-loss variability, by 10 basis points would have raised its stock return by around 3.5 percentage points per year from 1982 through 1986. ■

Corrigan Defends Move on Japanese Dealers

Two weeks ago, the Federal Reserve Bank of New York named three new primary dealers, including Nikko Securities Company International, the fourth Japanese bank to join the ranks of the primary dealers, which are now 43 in number.

Following is a letter to Rep. Charles E. Schumer, D-N.Y., from E. Gerald Corrigan, president of the Federal Reserve Bank of New York, explaining the move. Rep. Schumer is in his fourth term and is a member of the House Banking Committee and the House Budget and Judiciary committees.

□

This increased international character of the primary dealer group not only reflects the growing importance of international investor capital flows in the U.S. government securities market, but also the increased importance of that market to all types of financial institutions active in international capital markets.

— E. Gerald Corrigan
President
Federal Reserve Bank of New York

IN VIEW OF your continuing interest in our practices regarding primary dealer designations, I want to inform you of our decision to add three more firms, one of which is Japanese-owned, to our existing dealer list. I also want to summarize for you my assessment of the progress realized over the past year in improving conditions for U.S. firms to participate in Japanese financial markets, as well as what I would look forward to in that regard in the period ahead.

The three new firms being added to our list are CRT Government Securities Ltd., a subsidiary of Chicago Research & Trading Group; Lloyds Government Securities Corp., a subsidiary of Lloyds Bank PLC; and Nikko Securities Company International, a subsidiary of the Nikko Securities Co. Ltd. These firms have been developing their government securities dealer business for some time, and we have been monitoring their progress closely throughout this year. Since they presently meet our established criteria for primary dealers, and since we have had sufficient time to adjust to last year's significant expansion in the list, we feel it is now appropriate to take this action.

We also understand that two existing U.S.-owned primary dealers are completing negotiations which could, in the very near term, result in both of those firms being acquired by Japanese banks. Both acquisitions would be subject to review and approval under the Bank Holding Company Act.

It is only after any such reviews have been completed that we would make a separate, final determination of the firms' continuation as primary dealers, giving attention to the ability of new owners to add further financial, managerial, and market-making capacity to the dealer operations.

The effect of these actions, including the pending acquisitions, would potentially bring to 12 the number of foreign-owned primary dealers, including six Japanese-owned firms.

This increased international character of the primary dealer group not only reflects the growing importance of international investor capital flows in the U.S. government securities market, but also the increased importance

➸ **Continued from Page 5**

represents a most noteworthy step forward in the area of international financial policy coordination.

While these have been the focal points of our discussions, there are still other areas where the Japanese authorities have taken steps toward opening their financial markets — most of which were covered in the ministry's midyear announcement of a plan for further financial deregulation.

This included plans for further deposit deregulation; for improvements in short-term financial markets, including the interbank market, and the establishment of a domestic commercial paper market; for expansion of their financial futures markets; for development of their corporate bond market; and for improved foreign participation in investment advisory services.

In the year ahead, it is important that positive steps be taken in these areas and future plans made as specific as possible. It is also important that further improvements be made in terms of those policies that influence the ability of foreign firms to compete in the Japanese bond and equity markets and to introduce new financial products and services in Japan.

As in the past, we plan to follow closely the flow of policy actions directed at the further opening of foreign markets to U.S. firms and to weigh the nature and scope of these complementary actions in our future decision-making.

In closing, I would stress again that, overall, I regard the progression of events this past year as constructive and mutually beneficial. It has been one in which informal understandings and agreements have been consistently worked out and adhered to. While the process is not perfect and there is a full agenda ahead, the pattern of actions suggests we can have confidence in commitments and plans for future improvements. ■

Banks that Failed or Were Rescued in '87

□

These banks, which have not failed, required financial assistance from the FDIC in order to stay open.

1. **American National Bank,** Durant, Okla. The FDIC granted financial assistance Feb. 25 to prevent a failure of the $9.1 million-deposit bank. As a result of the transaction, American National Bank merged with First National Bank of Johnston County, Tishomingo, Okla. The combined bank was named First American Bank, Tishomingo, with the Durant office operated as a branch.

2. **Central Bank and Trust Co.,** Glenmora, La. The FDIC granted financial assistance Feb. 26 to prevent failure of the $28 million-deposit bank. The assistance facilitated the merger of Central Bank and Trust with Peoples Bank and Trust Co., Natchitoches, La.

3. **Syracuse Savings Bank,** Syracuse, N.Y. The FDIC granted financial assistance May 13 to prevent a failure of the $1.1 billion-deposit bank. The assistance facilitated the merger of Syracuse Savings with Norstar Bancorp, Albany, N.Y.

4. **Security Bank of Rich Hill,** Rich Hill, Mo., received $225,000 in open-bank assistance from the FDIC on June 5. The FDIC also bought $542,000 of Security Bank's assets. The failed bank has $12.9 million in assets. Deposits total $12.7 million.

5-15. **BancTexas Group Inc.'s** 11 subsidiary banks received $150 million in FDIC assistance July 17.

• 16. **Valley Bank of Belgrade,** Belgrade, Mont., received FDIC assistance of $3 million July 31. Valley Bank was then acquired by Mountain Bank Systems Inc., Whitefish, Mont., which contributed $1 million toward Valley Bank's recapitalization.

17. **Commercial Bank N.A.,** Oklahoma City, Okla., received $4.5 million in FDIC assistance Sept. 16 to prevent the $23.8 million bank from failing. Commercial Bank was bought by William M. and Lynda L. Cameron, who invested $2 million.

18. **Crossroads Bank,** Victoria, Tex., received $2 million in FDIC assistance Dec. 3 to prevent the $26 million-asset bank from failing. A group led by Dorothy Ploeger invested $2.5 million.

• 19. **The Falun State Bank,** Falun, Kan., received $50,000 in FDIC assistance Dec. 29 to prevent the $3 million-deposit bank from failing. Falun State Bank was merged with the Farmers State Bank of Galva, Galva, Kan.

Assistance deals the FDIC has given preliminary approval, but has not finished are:

Alaska Mutual Bank and **United Bank Alaska,** both of Anchorage, merged and received preliminary approval for $295 million in FDIC assistance June 23 to prevent the banks from failing. Alaska Mutual holds $800 million in assets, while United Bank has $505 million. The Hallwood Group took control of the banks, investing another $65 million.

First City Bancorporation of Texas, Houston, received preliminary approval for $970 million in FDIC assistance Sept. 9 to prevent the $12.2 billion holding company with 61 banks from failing. A group led by A. Robert Abboud took over First City, investing $500 million.

Jefferson Guaranty Bank, Metairie, La., received preliminary approval for $57.5 million in FDIC assistance Sept. 16 to prevent the $307 million-asset bank from failing. Jefferson Guaranty became part of a newly formed holding company, Royal Windsor Holding Corp., which invested $17 million. ■

Thrifts that Failed or Were Rescued

Mergers Assisted by the FSLIC

1. **Guaranty Federal Savings and Loan Association,** Harrison, Ark., a $40.1 million-asset institution, merged on Jan. 12 with Superior Federal Bank FSB, Fort Smith, Ark., with $616 million in assets.

Two Groups File For Bank Charters In Philadelphia

By A. JOSEPH NEWMAN JR.

PHILADELPHIA — Applications have been filed for two new bank charters in downtown Philadelphia, one of them in Chinatown.

The proposed Asia Bank of Commerce, which is seeking a state charter, would serve the growing Asian community here, according to James McCloskey, one of the organizers. Initial capital of $5 million would be raised through a private offering, he said, adding that several major area banks have expressed interest in buying stock.

Mr. McCloskey, a financial consultant, said the 100,000 Chinese, Koreans, and other Asians who live in Philadelphia would be "more comfortable dealing with their own bank." He said tellers would be bilingual and trilingual.

"No one has circled the [Asian] wagons," he said.

He said the bank would also cater to the general small-business market, which "larger banks are ignoring."

Two previous attempts to form banks for the Asian community here — one in Chinatown, the other in a Korean neighborhood — were aborted in the recent past.

The other recently proposed bank, Metrobank of Philadelphia, which has filed for a national charter, also picked a niche — commercial real estate lending.

Raymond Weisbein, proposed chairman, and his brother Jerome, proposed chairman of the real estate committee, are principals of Weisbein Enterprises, a real estate development, management, and investment firm.

Initial capital of at least $5 million would be raised via a public offering, according to Stephen Carroll, executive vice president and chief operating officer. Mr. Carroll, who was with Ryan, Beck & Co. and Provident National Bank here, said Metrobank would also do a general banking business. ■

24. **Topeka Savings and Loan Association,** Topeka, Kans., with $116.9 million in assets, on Oct. 20. ■

First Fidelity Agrees to Increase Housing Fund

Special to the American Banker

NEWARK, N.J. — The New Initiative Coalition, which uses the Federal Community Reinvestment Act to force concessions from banks planning interstate mergers, has scored another victory.

First Fidelity Bancorp., a Newark-based bank holding company, has agreed to make more than $30 million available below the market rate for low-income and middle-income housing. The money will be used for home improvements, home mortgages, and construction aid by nonprofit groups. In return, the coalition will drop objections to the holding company's merger with Fidelcor Inc. of Philadelphia.

First Fidelity joins Midlantic Banks Inc. of Edison and First Jersey National Corp. of Jersey City in settling with the coalition. Midlantic said in late 1986 it would provide $11 million, and First Jersey agreed to provide $28 million last year.

The coalition then withdrew its opposition to those firms' mergers. Midlantic's acquisition of Continental Bancorp of Philadelphia was completed early in 1987, while First Jersey is awaiting Fed approval of its acquisition by National Westminster Bank USA of New York.

The Federal Reserve Board is studying the merger application of First Jersey and NatWest and is expected to rule early in this quarter. The merger was approved Dec. 14 by First Jersey stockholders, who will receive $82 in cash per share for a 50% premium. The total cost to National Westminster PTL of London is $820 million.

According to the agreement with the coalition, First Fidelity will provide $5 million a year for three years in mortgage loans at 1.5% below the bank's prevailing rate. The loans, which may be for as long as 30 years, are earmarked for homes occupied by one to four families.

$3 Million at 1% Below Market

Up to $3 million a year will be made available for three years for home improvement loans at 1% below market.

First Fidelity will make a total of $5 million available for two nonprofit groups for site acquisition and construction of housing projects, with another $5 million for long-term financing of rental projects at the bank prime rate, with no points or fees.

Grants of up to $150,000 a year will be made for three years to assist in funding affordable housing projects.

A spokesman for First Fidelity denied that the bank was "pressured" into the agreement, asserting that First Fidelity was "delighted" to support the coalition's efforts. ■

Bank Institute Closing Two Regional Offices

➻ Continued from Page 2

courses, publications, and seminars. It covers less than one-fourth of its $25 million annual budget with dues, and that proportion has been shrinking for several years.

The field representatives play a role in the institute's program to reach the grass-roots level. They travel frequently, calling on members and supporting programs of local chapter.

"Having a field network gives the institute a better reading of the pulse of our constituents," Mr. Foss said.

Most of the field representatives are former bankers or persons with experience selling services to bankers. "They are well grounded in what has been taking place in the banking industry, deregulation, and the merger trend," Mr. Foss said.

The trend toward superregional mergers in the West and Southeast has reduced the number of banks. This may help explain the decision to close offices in California and Florida.

Mr. Foss said he is looking for a western representative to set up shop in Dallas. He said that he will talk with the Orlando representative about the possibility of relocating to Charlotte, but a decision has not been made.

Even with a streamlined branch network, the Bank Administration Institute will have more remote locations than other financial organizations, which remain highly centralized.

Mr. Burke discourages comparisons of the institute with trade groups such as the Washington-based American Bankers Association, which devote much of their resources to political lobbying. The Bank Administration Institute has evolved into an information and service provider with no political-action agenda.

Conventional trade associations are well ensconced on the Washington scene because of lobbying exigencies, but there are exceptions.

The Independent Bankers Association of America maintains corporate headquarters in Sauk Centre, Minn., where it was founded, although most of its activities revolve around its Washington office. It opened a western regional office in Huntington Beach, Calif., in 1984.

The U.S. League of Savings Institutions has split its operation between Chicago, its historical home, and Washington.

Robert Morris Associates, the trade group for commercial lenders, shares with the Bank Administration Institute a nonpolitical approach and a commitment to stay close to its 3,000 member institutions and 14,000 individual associates. Robert Morris, which is based in Philadelphia, established field offices in Atlanta in 1984 and in Houston in 1986. One field executive in each office spends most of his time on the road calling on bankers and chapter organizations. ■

SEC: Banks Seeking to Swap LDC Debt Must Write Down the Loans Involved

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Banks that offer to swap Mexican loans at a discount for bonds secured in part by Treasury securities should either write down that debt immediately or bolster their loan loss reserves, the Securities and Exchange Commission staff said Monday.

Mexico recently announced a new program under which it will exchange outstanding debt held by banks for new long-term bonds. The principal of the bonds will be secured by zero-coupon Treasury securities, which the Mexican government will purchase from the U.S. Interest will not be guaranteed.

The SEC staff said Monday that banks which tender loans to the Mexican auction agent should write down those loans to reflect the discounted price at which they were offered, even if the tender is rejected.

Alternatively, the staff said in its accounting bulletin, the bank could make additional loan-loss provisions to reflect the difference between the carrying value of the debt and the price at which it was offered.

The interpretation applies only to the loans which are actually tendered, rather than to a bank's entire Mexican portfolio, said Jeffrey C. Jones, a professional accountant in the SEC's Office of the Chief Accountant.

However, Mr. Jones said, the implication of the staff interpretation is that the entire portfolio should be valued at the same level as tendered loans.

The SEC staff also said that banks that tender loans should disclose information about the transaction to shareholders, including the value and terms of the debt tendered and the face value, carrying value, market value, and terms of the bonds received. ■

Hong Kong Firm Increases Stake in Whitney Holding

States News Service

WASHINGTON — Industrial Equity (Pacific) Ltd., a Hong Kong investment firm controlled by New Zealand financier Ronald Brierley, has increased its stake in Whitney Holding Corp. to 7.92%, according to a filing with the Securities and Exchange Commission.

The Hong Kong concern said it most recently bought 92,500 common shares between Nov. 11 and Dec. 16 at prices ranging from $52.50 and $54 each, for a total of $4.96 million.

Whitney Holding Corp. is a New Orleans-based bank holding company. ■

Accounts Restored After Bank Fraud

WILLIAMSPORT, Pa. — Northern Central Bank said the accounts of eight trust department customers are being "totally restored" following discovery of fraud and unauthorized trading involving more than $500,000 by a former trust officer.

The bank said its costs were "significant," but not material, and the $700 million-asset bank's 1987 earnings will be substantially higher than in 1986. No cost was given, but it included $300,000 in special legal and accounting fees.

The bank is a unit of the $2.3 billion-asset Keystone Financial Inc., State College, Pa.

Northern Central said Richard F. Neidig, who resigned in April 1986, has pleaded guilty to charges of intent to defraud. The bank said the fraud involved trading of securities between the accounts, creating artificial gains, and diverting the proceeds to other accounts. A federal indictment said he diverted only $2,000 to his own use.

The irregularities were discovered, the bank said, after a normal, unscheduled audit following the officer's departure. ■

Banks and Thrifts that Failed or Were Rescued in '87

WASHINGTON — The following is a list of U.S. banks insured by the Federal Deposit Insurance Corp. that failed or received FDIC financial assistance during 1987.

The bank list is followed by a compilation of thrifts that failed or required assistance from the Federal Savings and Loan Insurance Corp.

A bullet (•) denotes an agricultural bank, defined by the FDIC as having agricultural loans exceeding 25% of its total loans.

The number of insolvent banks that were either liquidated or merged into other companies is 184. Nineteen banks received FDIC assistance to keep them from failing. In 1986, 138 banks closed and seven got financial help from the FDIC.

One bank became the FDIC's first "bridge bank" last year.

□

1. **Bowie National Bank**, Bowie, Tex. Closed Jan. 8. Deposits of $12.6 million assumed by Bowie State Bank, a newly chartered subsidiary of Montague Bancshares Inc., Weatherford, Tex.

CONSUMER FINANCIAL SERVICES

What went right in retail banking in 1987? What went wrong? And what's the outlook for 1988? Four industry experts give *American Banker* their evaluation. ______ 7

CoreStates Bank of Delaware will begin marketing Visa cards on behalf of the United States Olympic Committee to some 11 million participants and supporters. ______ 3

Marketing Management: Bankers put too much emphasis on product management and not enough on the only thing that really counts — the customer and his needs, writes Barry I. Deutsch. A bank is more like a store than a manufacturer, he contends, in its relationship to the consumer. ______ 4

Barry I. Deutsch

Persons 50 years and older consider guaranteed safety, high rates of return, and a trouble-free checking account most important when selecting a financial institution, according to a Goldring & Co. study. ______ 6

INSIDE

The *American Banker* today introduces a **Banking on the Arts** column. The monthly feature will look at the involvement of the financial services industry in the arts, including joint efforts. The first installment shows that the art world has survived the stock crash unscathed. ______ 2

Valley Federal Savings and Loan, Van Nuys, Calif., said it is in "serious discussions" with a California thrift on a possible merger. ______ 2

President Reagan signed legislation authorizing a secondary market in farm mortgages but criticized the bill, which also provides for a $4 billion bailout of the beleaguered Farm Credit System. Meanwhile, Rep. John D. Dingell said he had serious doubts about whether banks can underwrite the securities. ______ 2

TEXT

The SEC issued an opinion encouraging bank holding companies to use generally accepted accounting principles in the new Mexican loan-for-bond debt swap. ______ 10

Banks and Consumers Reassess Their Strategies After the Crash

By JAY ROSENSTEIN

For many people, it takes something as shocking and sobering as a heart attack to force them to evaluate what really matters in their lives. The October stock market crash may have been enough of a shock to the American financial system to make consumers take stock — for the first time in years — of what really matters to their economic well-being.

How much risk are they prepared to take with their money? Which institutions and advisers do they trust? How much are they willing to spend and to borrow? And how important is convenience when balanced against price?

CONSUMER FINANCIAL SERVICES
AN AMERICAN BANKER WEEKLY FEATURE

Perhaps the major task facing the consumer financial services industry in 1988 is determining the basic needs of consumers — without ignoring fads and fashions — then using this information to formulate marketing strategies.

Because these questions are being asked now doesn't mean that the industry wasn't trying to understand consumer needs in the months before the stock market crash. Chase Manhattan Corp. created a certificate of deposit for consumers who wished to dabble in

270 Bank of America Branches Offer Life Insurance, Mutual Funds, Annuities

By LYNN BRENNER

NEW YORK — Bank of America said it is now making life insurance, mutual funds, and annuities available at 270 branches through an arrangement with GNA Corp., a Seattle-based marketing agency.

GNA Corp. will pay the bank a concession fee for access to its customers, a Bank of America spokesman said. The fee is not based on volume of sales.

The program, called Investment Network of America, is Bank of America's second publicized attempt in four years to offer its customers insurance products. In June 1986, the bank quietly ended an unsuccessful 18-month program in which Capitol Holding Co. sold life, automobile, home owners', and renters' insurance at 23 branches. Capitol Holding is a Kentucky-based insurer that specializes in direct response sales and telemarketing.

A more recent, much smaller, and unpublicized venture involved Equitable Life Assurance Society of the United States. Equitable offered life insurance to a small, affluent group of Bank of America customers, a bank spokesman said, but that program was not successful either.

The new program is much more ambitious than its predecessors, and it offers a different product line — property/casualty coverage is omitted, and mutual funds are added. Also, GNA Corp., a subsidiary of Weyerhaeuser Co., Tacoma, Wash., specializes in selling insurance and securities to bank customers through a sales force of ac-

400 at Citicorp Facing Layoffs; More Expected

Bank Confirms It Will Cut Investment Banking Staff

By JED HOROWITZ

NEW YORK — Citicorp officials confirmed Wednesday that 400 employees — 16% of its investment banking staff in North America — are being fired. They would not comment on reports that Citicorp ultimately will lay off more than 10,000 employees this year.

The long-expected layoffs were announced to investment bank employees in an internal memo Wednesday morning, followed immediately by dismissals for some individuals, sources said. The bulk of the cuts are in municipal finance and mortgage-backed securities — areas that several Wall Street firms recently eliminated, in part because of price-cutting incursions from commercial banks.

Alan MacDonald, group executive in the North American investment bank, also wrote in the memo that "adjustments of lower magnitudes" would hit corporate finance, liquid markets, funding, and operations at the nation's largest banking organization. Liquid markets includes Citibank's foreign exchange and government finance desks.

A Citibank source said about two-thirds of the layoffs will affect employees in operations and systems who support sales and trading.

Sources predicted that the retrenchment will spread overseas in the next few weeks. Citicorp employs about 11,000 people in its investment bank worldwide — including 2,500 in North America.

"There's been a sense of impending doom for the past six months at the investment bank," said a retail banking official who asked for anonymity.

MARKETING MANAGEMENT

On Planning Horizon, Customers Are Often Unseen

ALTHOUGH WE TALK ABOUT planning, in the context of the long range, the planning horizon rarely extends beyond the current fiscal year. One byproduct of the short attention span of managers of financial service organizations is brisk changes of emphasis. Derivative, in turn, is the constantly changing jargon we use to describe how we plan to live our lives from planning horizon to planning horizon.

I guess it was three or four years ago when the concept of being customer driven burst upon us, and every article or presentation on the subject of "this year's plan" promised that our organization would be customer driven as never before.

The next year, we were going to positively impact return on assets. Wisdom teeth, not ROAs, are most often impacted. Split infinitives aside, the verb means "to pack firmly together." I'm not sure why we wanted to do that to our ROA, but we all said we did, nevertheless.

Next came two concepts to hit us at once — we were going to build sustainable competitive advantage and always insure that we added value.

Deutsch Says:

Banking services are purchased infrequently, and what is purchased is not designed to be consumed or replaced — what is purchased is a continuous stream of service.

The skeptics among us might argue that planning processes nurture words more than ideas, but that is unfair. Through the admittedly arguable technique of flocking after this year's hot button, we do get an opportunity to examine a spectrum of concepts. The planning skill is to sort among them, to analyze each critically, and to rally around the ideas and resulting programs which best fit one's own market situation.

In that spirit I offer one or two questions that probably should be examined, if for no other reason than for the sake of completeness.

First: Are we so concerned with product management that we are neglecting market management?

The suggestion here is that a bank is more like a store than a manufacturing company. Banking services are not designed to be consumed or replaced.

The conventional wisdom has it that products have to be managed, and all the reasons why that is so can be found after any half-hour Nexis search. The question is one of balance — because just as products have to be managed, so do markets, and market management is not product management.

With the development of product management has come a marked shift in focus — and I am afraid it has not been altogether salutary. We spend too much time worrying about whether to permit 16-month or 30-month payment periods for personal credit lines; worrying about how to design drop-lock, flip-flop, variable-rate savings certificates; worrying about whether to offer 23 or 33 styles of checks; and not worrying about the only thing that really matters — the customer and what the customer's needs are, and how to best serve those needs.

Second question: Have we become so accustomed to hearing about the consumer goods marketing model that we have stopped considering whether it fits us?

Here, for your consideration, is another marketing model, which may fit the financial service marketing challenge more closely. The marketing challenge that the banker faces is more like that of a store owner than a product manufacturer. Frankly, I am not sure that the fit is perfect in either case, but see if you don't agree that the relative "more closely" is accurate.

Companies that make products worry about the name of the product and how to advertise it; about the location of the product on the shelf and the product's package; about the price and the color of the label. They think about product enhancements, product lifecycle theory, and product extension strategies. Collectively, they spend hundreds of millions of dollars on advertising. Their fundamental purpose is to get the shopper to buy the product.

Their underlying assumption is that the shopper will get to the store; and, in fact, they don't much care which store is gotten to. That is because, except in some specialized industries, there are no stores dedicated to brands and in most consumer goods categories there are few dedicated to products. When is the last time you went to a cereal store? Or the local Heinz outlet?

The product-purchase decision and the store-selection decision are made independently. And repurchase decisions are made only after use and consumption.

It is the store owner who has to deal with the problem that no sales take place until customers arrive at the selling place. When store owners talk about being market driven, they know that being market driven means being driven to design their stores with the customer in mind. They insure that the store is well lit and easy to navigate; that the products are displayed attractively, are easy to choose among, and are fresh and clean; and that courtesy is always present.

The suggestion here is that a bank is more like a store than a manufacturing company. Banking services are purchased infrequently, and what is purchased is not designed to be consumed or replaced — what is purchased is a continuous stream of service. The concept of a stream of service suggests frequent contact between the service provider and the user. There are deposits to be made, balances to be inquired about, credit facilities to be taken down, wire transfers to be sent. Whether in person, by phone, or by personal computer, no matter how configured, the customer has to go to the banking store again and again.

We are protected from our product managers by our positions. We get the banking services provided by our personnel departments, frequently at a discount, and we can ignore the complexity because we are often awash in the background material. We understand financial services.

We are protected from our stores by our positions. We don't have to stand in slow-moving lines, use drive-in windows, negotiate our parking lots, or stare down tellers who don't know us. Those of us who don't send our secretaries downstairs use the "main office," thus enjoying the only office that is apt to be overstaffed. We get the same banking service provided to the chairman of the board.

Have we become so accustomed to hearing about the consumer goods marketing model that we have stopped considering whether it fits us?

You can't help wondering what the planning buzzword of the year would be if more of us walked in the customers' moccasins. ■

The *American Banker* today welcomes back Barry I. Deutsch as one of its regular columnists for our weekly Marketing Management column. Mr. Deutsch is executive vice president of BankAtlantic, Fort Lauderdale, Fla., a $2 billion federal savings bank. He oversees his institution's marketing, financial services planning, and communications departments. Before joining BankAtlantic last October, Mr. Deutsch was senior vice president and head of marketing for Mellon Bank, Pittsburgh.

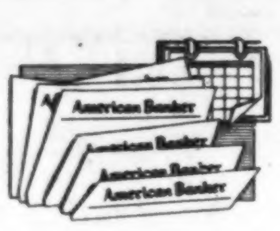
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- In his State of the Union address, President Truman called for a $40 tax cut for each individual. The cut would come at the expense of corporations, he said, because they could "well afford to carry a larger share of the tax load." Mr. Truman told Congress that low-income families were faced with a high cost of living, while "at the same time, profits of corporations reached an all-time record in 1947" of $17 billion, compared with $12.5 billion in 1946.
- The Treasury Department announced that the Miss Liberty half dollar would be replaced by a coin bearing the likeness of Benjamin Franklin.
- Texas led the nation in new banks in 1947, according to figures compiled by the American Banker. Twenty-six banks opened in the state, compared to 12 in 1946. Nationwide, 114 banks opened in 1947, down from 138 the year before.

20 Years Ago

- Bankers warily endorsed President Johnson's program to end the U.S. payments deficit in 1968. The program included a reduction in the ceilings for foreign bank loans permitted under voluntary programs, and gave the Federal Reserve Board standby authority to change the voluntary program to one of mandatory guidelines. Some bankers said they were puzzled by an aspect of the program that called for banks to "contribute" $500 million toward payments equilibrium by slicing that amount from short- and long-term credit extended to foreigners. "As a practical matter you just can't refuse to renew all these credits," said the chairman of one large international bank.

10 Years Ago

- G. William Miller, President Carter's newly designated Federal Reserve Board chairman, said two of his chief goals would be to curb inflation and to increase the attractiveness of membership in the the Federal Reserve system.
- The Federal Reserve Board revealed it would broaden its definition of unsafe and unsound banking practices to include "questionable or improper" domestic political contributions by banks. An attorney for the Federal Reserve Board said the agency would define questionable and improper payments on a case-by-case basis.

5 Years Ago

- Thirty-seven banks were scheduled to open in Texas in January — an unprecedented monthly total. Most of the new banks were nationally chartered, independent institutions located in the affluent, high-growth suburbs of Houston, the Dallas-Fort Worth area, and Austin. "Everyone who has two nickels to rub together is opening a bank or trying to," said John J. Rau, president of the newly opened Petrobank, located in Houston's fast-growing "energy corridor."
- About 20 Arkansas community bankers formed an independent bankers association, charging that the Arkansas Bankers Association did not offer programs that fit their needs.

1 Year Ago

- Figures released as part of President Reagan's proposed federal budget showed that bank and thrift failures would deplete federal insurance funds faster than expected. "Outlays by the major deposit insurance funds are estimated to exceed previously planned levels by $5.8 billion in 1987 and $4 billion in 1988," said James Miller, director of the White House Office of Management and Budget.
- U.S. regulators joined Britain's central bank in proposing capital guidelines that would require big banks in both countries to carry higher levels of capital to cushion against riskier activities.
- Calling banks "just plain greedy," a coalition of consumer groups kicked off a six city campaign in New York aimed at lowering interest rates on bank credit cards.

Cincinnati Firm Signs For NCR Workstations

CINCINNATI — First National Cincinnati Corp. has contracted with NCR Corp. to buy teller and customer service equipment that could involve as many as 650 workstations.

The NCR Financial Tower System 2 Branch Automation System will be installed at 35 branches of the $2.5 billion-deposit First National Bank of Cincinnati, flagship of the 13-bank holding company.

Phillip A. Parker, senior vice president of the corporation, said other affiliated banks and possibly some correspondent banks will be included over the next two years.

The Tower System 2 has been tested for six months at First National Bank. NCR, which is based in nearby Dayton, said First National's installation of the 5267 and 5067 workstations will be one of the first in the United States since they were introduced in early December. ■

Merrill Unit Led in '87 Long-Term Munis

Senior Manager For 277 Issues

By MATTHEW KREPS
The Bond Buyer

NEW YORK — Merrill Lynch Capital Markets was the leading senior manager for long-term municipal bonds in 1987, according to preliminary figures from MuniSearch, *The Bond Buyer's* electronic data base.

Hawkins, Delafield & Wood was the year's top bond counsel and the New York State Medical Care Facilities Finance Agency was the largest issuer, according to MuniSearch.

Merrill Lynch was lead manager for 277 issues totaling $8.66 billion in 1987, for an 8.5% share of a total long-term volume of $101.7 billion. These figures include both tax-exempt and taxable bonds.

Merrill Lynch was the dominant senior manager in 1983, 1984, and 1985, but was nosed out of first place in 1986 by Salomon Brothers Inc. Salomon was the leading underwriter for most of last year, but the company dropped out of the municipal bond industry in October and finished the year in third place.

Goldman, Sachs & Co. was a close second in 1987, with 139 issues totaling $8.2 billion. It was followed by Salomon Brothers, $7.76 billion; Smith Barney, Harris Upham & Co., $7.23 billion; and First Boston Corp., $6.56 billion.

In 1986, the top five senior managers were Salomon Brothers, with $14.93 billion; Merrill Lynch, $14.87 billion; Goldman Sachs, $11.84 billion; Shearson Lehman Brothers Inc., $8.92 billion; and Smith Barney, $8.08 billion.

Twenty-four investment banking firms and commercial banks were lead managers for more than $1 billion of new issues last year, down from 27 in 1986 and 37 in 1985.

Hawkins Delafield was the leading bond counsel in 1987, with 151 long-term issues totaling $5.8 billion. The firm was second in 1986 and fourth in 1985.

Mudge Rose Guthrie Alexander & Ferdon, which had been No. 1 in 1985 and 1986, was second last year, with $5.59 billion. It was followed by Orrick, Herrington & Sutcliffe, $4.9 billion; Brown & Wood, $4.56 billion; and Chapman and Cutler, Chicago; $4.54 billion.

In 1986, the leading bond counsel were Mudge Rose, with $13.13 billion; Hawkins Delafield, $8.81 billion; Orrick Herrington, $7.24 billion; Chapman and Cutler, $5.34 billion; and Kutak, Rock & Campbell, Omaha, $4.34 billion.

Twenty law firms were bond counsel for $1 billion or more of new issues in 1987, down from 29 in 1986 and 44 in 1985.

The top underwriter and bond counsel withstood strong yearend showings by the second-place firms. Goldman Sachs led the underwriters last month with $808 million of new issues — more than twice Merrill Lynch's $401 million. Mudge Rose was the top bond counsel for the month with $769 million, well ahead of second-place Orrick Herrington's $483 million.

The New York State Medical Care Facilities Finance Agency was the nation's busiest issuer of long-term bonds in 1987, with 11 issues totaling $1.82 billion. That put it ahead of Puerto Rico, which sold $1.62 billion; the Louisiana Public Facilities Authority, $1.53 billion; the Municipal Assistance Corporation for the City of New York, $1.45 billion; and the state of Louisiana, $1.29 billion.

Four other issuers sold more than $1 billion of new bonds in 1987: the Intermountain Power Agency in Utah, $1.25 billion; New York City, $1.21 billion; the Grand River Dam Authority in Oklahoma, $1.15 billion; and the North Carolina Eastern Municipal Power Agency, $1.01 billion.

Salomon Brothers was the leading senior manager in the much smaller short-term municipal market last year, with seven issues totaling $2.85 billion, for a 17.8% share of the $16.02 billion volume. Salomon was ranked fifth in 1986.

Merrill Lynch, which was the top senior manager of short-term municipals in 1986, was second last year with $1.99 billion. It was followed by Shearson Lehman Brothers Inc., $1.75 billion; BankAmerica Capital Markets Group, $1.01 billion; and Goldman Sachs, $978 million.

Orrick Herrington was the leading bond counsel for short-term municipals last year, with 12 issues totaling $2.51 billion. ■

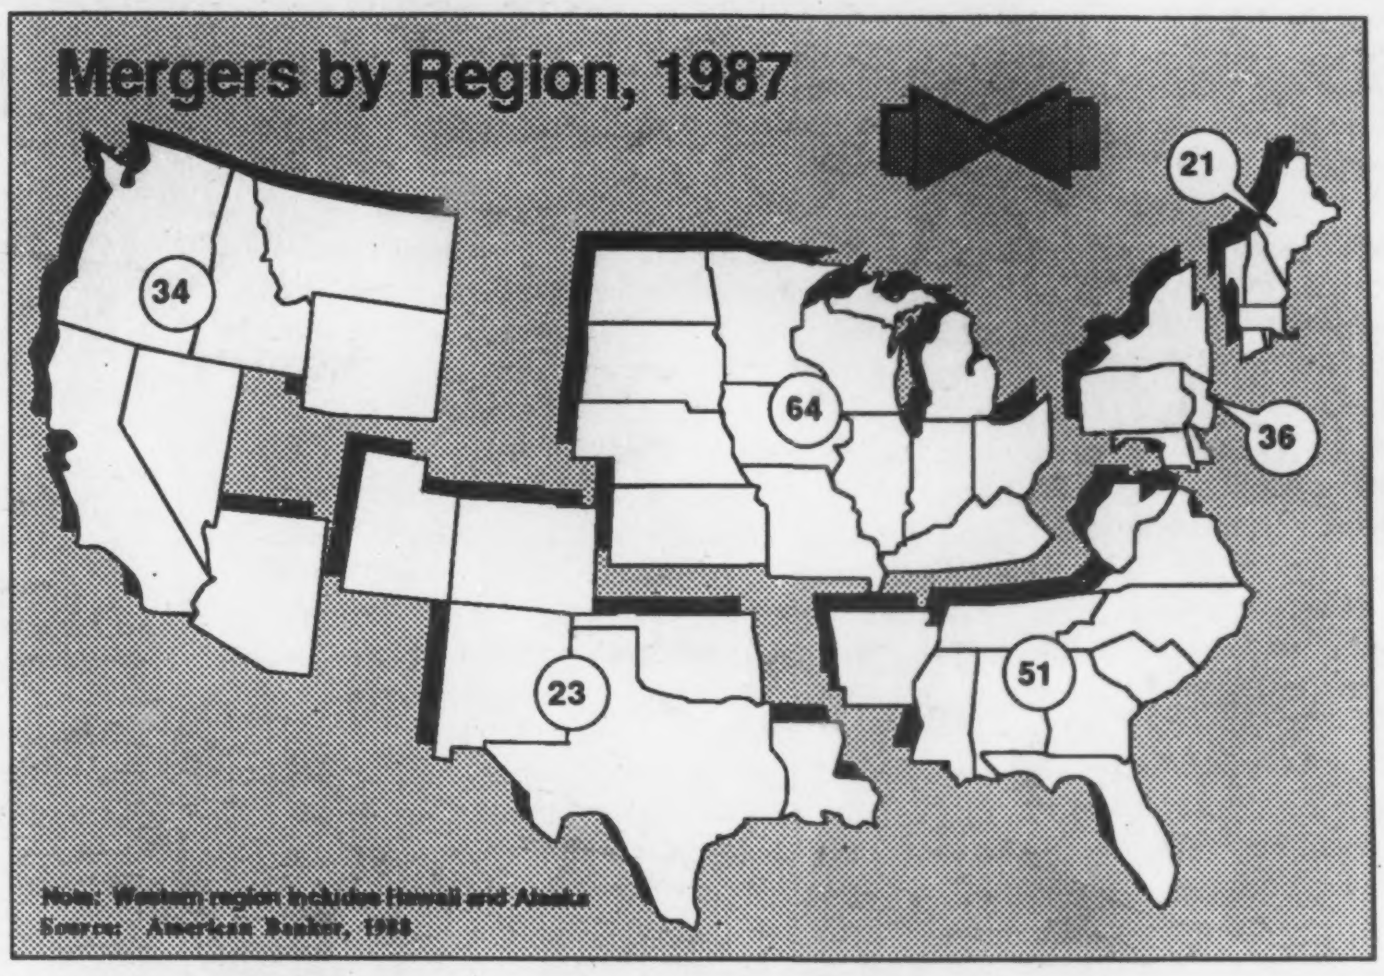
Despite the Crash, 1987 Was a Year for Mergers



Note: Western region includes Hawaii and Alaska
Source: American Banker, 1988

But Activity Slumped After Market Prices Fell

By GORDON MATTHEWS

NEW YORK — The 1987 merger scene in the banking and thrift industries can be divided into two separate and unequal parts — the period before the stock market crash of Oct. 19 and the three months since that watershed financial event.

Just before the market plunge, merger activity was proceeding at its fastest pace of the year, and high-priced acquisition agreements were regularly being unveiled, although the year's largest deals were more moderately structured mergers of equals. (Tables of mergers and acquisitions begin on page 18.)

Since the dramatic fall in equity prices, the level of deal-making has slumped significantly, and a number of acquisitions already in the works have been canceled. But at the same time the stage may already have been set for the next wave of industry consolidation.

In short, the merger scene in the year just ended was punctuated by extreme highs and lows. Measured by the value of deals being announced, activity was almost five times greater in the busiest month — July — than in either of the two slowest months, January and December.

Nearly half the combined value of the year's deals was announced in just three months — July, August, and September. A significant fraction of that was a result of the decision of an important state — New Jersey — to open its borders to reciprocal interstate banking on a nationwide basis as of Jan. 1, 1988.

And while fewer deals were announced than in 1986 — the first full year of regional interstate banking — the aggregate price of deals was $17.15 million, exceeding the $16.71 million of the previous year. Perhaps that should not be surprising, since the

How to Raise Risk-Adjusted Spreads

By SANFORD ROSE

Are banks getting paid enough for the risks they are assuming in commercial and industrial lending? Most would argue that they are not, but few have any firm idea of the spreads required to cover their risk. Now along comes Dimensional Corporate Finance of San Francisco with an analysis of the total yields needed in lending to companies in five discrete risk classes versus the actual yields being realized. The results are mind-boggling.

In order to understand the risks built into C&I loan portfolios, Dimensional undertook an extensive study of bankruptcies of public firms for the period 1979-86. It constructed a measure of creditworthiness called the Shadow Bond Rating which closely mirrors the actual rating for publicly issued senior debt and can be expected to provide a good indication of what rating a company would receive on privately issued senior debt. Based on this measure, Dimensional was able to array some 3,500 borrowers with both rated and unrated debt into five risk classes mimicking those of the rating agencies — a,

➵ Continued from Page 1

triple b, double b, b, and triple c.

What spreads are required to cover the risks of lending to borrowers in each class? Credit risk can be subdivided into expected and unexpected losses. Expected losses are derived from the average annual loss experience of borrowers in each risk class. Unexpected losses reflect the lumpiness or variability of chargeoffs. This is measured by the standard deviation of losses during the 1979-86 period.

Two Premiums

Lenders should be able to charge enough to cover their expected losses and some proportion of the unexpected losses. Data from the securities markets indicate that lenders typically demand a premium equal to expected or average losses plus an additional premium amounting to one-half the unexpected losses or the standard deviation.

Thus, in order to maintain a loan portfolio that will fetch at least par if sold, a lender to the entire universe of 446 companies assigned an "a" rating by Dimensional should receive a premium over its cost of funds that is equal to the average net loss experience — defaults minus recoveries — of these companies from 1979 to 1986 (3 basis points) plus 50% of the standard deviation of losses (another 3 basis points).

Hence, if we assume that a bank in 1986 could borrow at the Libor rate of 7.50%, its breakeven lending rate to a-rated borrowers — not taking into account functional costs — amounted to 7.56%.

Breakeven yields for lower-rated borrowers rise fairly dramatically. That's because of three factors: The average loss experience increases, the recovery rate declines, and the standard deviation of losses rises disproportionately as we move down the quality spectrum. The breakeven yield for triple b borrowers amounted to 8.10%; those for double b, b, and triple c borrowers were 9.24%, 10.42%, and 13.23%, respectively.

Dimensional then estimated the actual all-in spread realized in each borrower class, based essentially on work done by the Loan Pricing Corp. of New York. This spread includes rates, fees, and the value of balances.

Where's the Spread?

Subtracting the required or breakeven yield from the realized yield provided a measure of the risk-adjusted spread. Arrayed by risk class in descending order, banks made 24 basis points from a-rated borrowers, 19 basis points from triple b customers, 34 basis points from double b borrowers, and 41 basis points from b borrowers. They lost 178 basis points on loans to customers rated triple c.

Two conclusions are obvious. First the size of the risk-adjusted spread is everywhere pitifully low. Second, banks don't make very much more from lower-quality borrowers than they do from higher-quality customers after returns are deflated for risk.

However, the analysis thus far presupposes that banks lend to the entire universe of borrowers in each risk class. This assumption is extremely unrealistic. No bank holds a completely diversified portfolio. If we assume more realistically that banks lend to only a few companies in each risk category, what happens to risk-adjusted spreads?

If markets are reasonably competitive, the realized yield remains the same. The average net loss experience also stays the same. But the consequence of lending to only a small part of the universe of available borrowers is a much enhanced year-to-year variability in losses, as measured by that standard deviation.

Dimensional has estimated the additional risk premium arising from holding relatively overconcentrated loan portfolios — which is the norm — and then recomputed breakeven yields. For example, a bank that lent to the full universe of 703 triple b companies had a breakeven yield of 8.10% and a risk-adjusted spread of 19 basis points. But if that bank lent to only 20 of these companies and the fortunes of these companies were 50% correlated, the standard deviation of losses would rise from 64 basis points to around 100 basis points.

Hence the breakeven yield would increase from 8.10% to 8.28%, and the risk-adjusted spread would practically disappear. In effect, the bank would not be getting paid at all for the risks it was assuming.

Truth About Downscaling

Calculating revised risk-adjusted spreads on the above assumptions, Dimensional reaches the conclusion that there is no profit at all in lending to lower-grade borrowers. Risk-adjusted spreads are zero to negative for every class of borrower, except the a-rated category.

To be sure, individual banks may lend to many more than 20 borrowers in each of the various categories. To the extent that they do, their risk-adjusted spreads may turn out to be positive in some borrower categories.

But since these banks are unlikely to lend to anything approaching the full universe of customers in each category, loan-loss variability will remain reasonably high, raising risk premiums and lowering risk-adjusted spreads below what they would have been if the banks had confined their lending to the top-rated customers.

Lending to a-rated borrowers results in low nominal spreads, but also low expected losses. And the level of expected losses is highly correlated with that of unexpected losses — the standard deviation. That is, low average losses mean a low standard deviation, while high average losses are associated with a high standard deviation.

Otherwise put, if a bank served only top-grade borrowers, it would not need very much diversification to realize better risk-adjusted returns than it would if it served lower-quality customers. Because standard deviations rise so sharply as the bank moves to a lower-quality customer base, it would probably have to become a far more diversified lender than it is capable of becoming in order to equal or surpass the risk-adjusted returns earned from the top-rated borrowers.

This is not to argue that the returns from lending to a superior clientele are adequate. As noted, they are anemic. The point, however, is that the average bank cannot do any better by moving more decisively into the middle market of lower-grade credits. In fact, according to this evidence, it could do worse — much worse.

Pitch for Pooling

The upshot is that banks can produce improved risk-adjusted returns in only one of two ways. They can concentrate on lending only to investment-grade borrowers. Nominal returns may fall, but since risk-adjusted returns will move up, equity valuations will probably improve.

Alternatively, banks can seek more or less full diversification in all lending markets, except among the triple c group of borrowers, where no amount of diversification will achieve positive returns.

No bank on its own can reach anything like full diversification. This is feasible only if banks join together in pooling arrangements, under the terms of which they contribute loans of a given risk class and take back proportional interests in a pool that roughly represents a cross-section of the outstanding debt in that class.

Dimensional is currently engaged in efforts to construct such pools. Its labors merit the closest scrutiny of all bankers anxious to improve their risk-return tradeoffs. ■

WHAT'S YOUR ANSWER?

Credit Report on Employee's Spouse Was Obtained Illegally

By CHARLES G. DALEY

Is an employer liable for requesting a credit report on an employee's spouse?

YES. The Fair Credit Reporting Act, 15 U.S.C. Sec. 1681, limits the circumstances under which a credit report may be requested.

Unless a spouse is listed on a loan application, a lender may not request a credit report on the loan applicant's spouse. Similarly, an employer may not request a credit report on an employee's spouse.

Valley Federal Savings & Loan Association of Grand Junction, Colo., was recently assessed $61,500 in damages for violating this prohibition. In this case, the thrift employee was a loan officer who married Joseph Zamora.

When they were married, Valley Federal obtained a credit report on Mr. Zamora by claiming that the report was sought for employment purposes. At the time the report was requested, Mrs. Zamora was being considered for a branch manager position.

The credit report indicated, among other things, an unpaid telephone bill. When the thrift's request caused the phone company to take steps to collect the bill, the Zamoras learned of the request for the credit report.

Mr. Zamora then filed suit under the Fair Credit Reporting Act, claiming that Valley Federal had knowingly and willfully obtained a credit report in violation of the act. The trial court ruled that a credit report cannot be obtained on the spouse of an employee for "employment purposes."

The court held that the S&L had obtained the credit report under false pretenses. The jury awarded Mr. Zamora $61,000.

The U.S. Court of Appeals affirmed the award. (Zamora v. Valley Federal Savings and Loan Association of Grand Junction, Colo., 811 F. (2) 1368, 1987)

On appeal, Valley Federal argued that an employer may obtain a credit report on a spouse of an employee being considered for a security-sensitive position, because the report would be used to evaluate the trustworthiness of the employee. The appeals court disagreed.

The Fair Credit Reporting Act permits an employer to obtain a credit report on the employee only. Obtaining a report on the employee's spouse would violate the right of privacy that the act is intended to protect.

The appeals court agreed that Valley Federal knowingly obtained the report under false pretenses. ■

Credit Card Bank Likes to Swap

Citicorp's Dakota Unit Is Active in the Market To Hedge Receivables

By LISABETH WEINER

CHICAGO

CITIBANK South Dakota NA, the Citicorp subsidiary that issues MasterCard and Visa credit cards, has emerged as an active participant in the $313 billion U.S. interest rate swap market.

According to figures compiled by the Federal Reserve Bank of Boston from bank call reports dated June 30, 1987, Citibank South Dakota, Sioux Falls, has outstanding swaps with a notional value of $2.1 billion, making it the 19th largest commercial bank swap player in the U.S. That's more than double the amount of swaps that the bank had outstanding at the end of 1986, the first year that the Citicorp subsidiary booked swaps.

Yet despite the magnitude of this interest rate swap activity, a poll of major commercial bank and investment bank swap dealers shows that no one has ever heard of Citibank South Dakota as a swap counterparty. That's because Citibank South Dakota only does swap business with Citibank, Citicorp's main bank subsidiary and the largest commercial bank swap player in the U.S.

A Citibank swap dealer confirmed that Citibank South Dakota conducts its swaps to hedge its credit card receivables. Since the two companies are separate legal entities, Citibank South Dakota's swaps are counted apart from those of Citibank's.

A swap is an exchange of interest rate obligations between counterparties. Financial institutions and corporations "swap" fixed-interest-rate payments for floating-rate payments, as a means of managing their asset liability, reducing their funding costs, and improving their balance sheets.

The market has exploded in the last few years as swap dealers have customized transactions to fit each participant's needs.

Meanwhile, swaps have proven to be a source of reliable income for banks, even though as the market has become more competitive, swap spreads have been greatly reduced.

Swap dealers said the use of interest rate swaps to hedge credit card receivables has become standard practice, although banks appear to use different strategies, depending on their own funding sources and the size of their portfolios. For Citibank South Dakota, swaps are clearly a crucial tool in managing the credit card portfolio, which is estimated to be about $10 billion. The bank is estimated to have about 15.4 million cards outstanding.

Citibank South Dakota's aim in hedging its credit card portfolio is to match the receivables, which are funded on a variable-rate basis but are considered to be a fixed-rate asset, with a fixed-rate payment. This protects the bank against rising interest rates.

A Balancing Act

Credit card receivables, according to swap sources, are considered to be a term fixed-rate asset with an average life of between one and two years. In order to maximize the spread, the bank pays the fixed interest rate in the swap and receives the floating interest rate. This gives the bank a steady stream of interest rate payments to help cover the costs of financing the credit card portfolio.

Because credit card receivables carry interest rate

Citibank: Page 30 ➸

Commercial Banks Harvest Few Rewards As Investment Bankers to Municipalities

By JED HOROWITZ

NEW YORK

MUNICIPALITIES and other public-finance issuers paid an average of $3.6 million in investment banking fees and commissions in a recent 12-month period, but commercial banks reaped few of the rewards.

According to preliminary results of a new study from Greenwich Associates, issuers paid a disproportionately large amount of their fees — 40% — to their most important investment bank and another 18% to their second most important investment bank. However, a Greenwich official estimated, only about 2% of issuers mentioned commercial banks as their top advisers and brokers.

This reflects less on the talents of commercial banks than on regulatory restrictions, the Greenwich official said. Most of the 273 issuers interviewed raised money through negotiated revenue bonds. This area is, to a great extent, off limits to banks because of Glass-Steagall Act restrictions.

The issuers represented housing authorities, utilities, health and education agencies, and state and local governments. They paid annual fees ranging from zero to over $20 million.

Nine percent of the issuers, led by health and education authorities, told Greenwich they paid no investment banking fees for the preceding 12 months. Three percent, all from state, local, or county governments, said they paid over $20 million in fees.

The mean fee paid by the typical issuer was $3.64 million. Utilities averaged the highest fees, $4.65 million. Health and education authorities paid the lowest, $1.02 million. Greenwich did not identify the issuers.

The consulting firm, based in Greenwich, Conn., surveys the corporate world on the quality of financial services they receive. The Greenwich survey — its first on public finance — comes at a paradoxical time.

Many of the leading investment banks on Wall Street have trimmed or shed their municipal bond businesses, citing new tax laws that restrict sales of the securities and profit-cutting competition from commercial banks. Salomon Brothers Inc., the biggest municipal dealer, stunned Wall Street last fall by eliminating its department.

Last week, Citibank eliminated

Ward Goes to Euromarket

Montgomery Ward Credit Corp., Wilmington, Del., has completed a $260 million Euromarket revolving credit facility with Swiss Bank Corporation International Ltd.

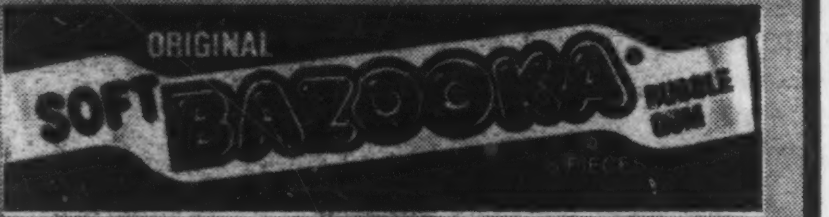
The three-year agreement includes the participation of: Amsterdam-Rotterdam Bank NV, Bank of New York, Bank of Tokyo/California First Bank, Continental Illinois National Bank and Trust Company of Chicago, Mitsubishi Bank Ltd., Societe Generale, Banca Nazionale del Lavoro, the Bank of Nova Scotia, Canadian Imperial Bank of Commerce, Deutsche Bank AG, Royal Bank of Canada, Algemene Bank Nederlend, and Istituto Bancario San Paolo di Torino.

Montgomery Ward Credit said it will use the facility as additional backup for its commercial paper activities.

Topps Lands Unsecured Credit

Topps Co., a baseball card and bubble gum company, has signed a definitive credit agreement with a group of banks for $175 million in financing, most of which will go toward the payment of a special dividend to shareholders. The unsecured financing, led by Manufacturers Hanover Trust Co., will consist of a $140 million term loan and a $35 million revolving credit.

Bank officials said the term loan will be initially priced at one percentage point over the bank's prime rate, or two percentage points over the London interbank offered rate, and will be payable over eight years in quarterly installments — $2.5 million per quarter for the first two years, $3.75 million per quarter over the next three years, and $6.25 million per quarter over the final three years.



When the balance of the term loan falls below $100 million, the price of the facility will be reduced by 25 basis points, and will continue to be reduced in increments of 25 basis points as the balance falls below $80 million, $60 million, and $40 million.

In addition to Manufacturers, the lending group consists of Continental Illinois Bank and Trust Company of Chicago, Long-Term Credit Bank of Japan, Hibernia National Bank of New Orleans, Carteret Savings Bank, and Equitable Bank.

Great Western Gets Backup

Great Western Bank, Beverly Hills, has syndicated a $350 million standby revolving underwriting facility through Merrill Lynch International & Co.

The three-year facility will be used as a backup for Great Western's commercial paper program. The pricing, similar to that achieved by AA-rated financial institutions, consists of an annual facility fee of 10 basis points, a maximum margin on the notes of 10 basis points over Libor, and allocation fees ranging from 2.5 to five basis points.

Lead managers for the syndicate group are: Bank of Montreal, Canadian Imperial Bank of Commerce, Credit Lyonnais, Fuji Bank Ltd., and Westdeutsche Landesbank Girozentrale. Managers are: Bank of Tokyo Ltd., Mitsubishi Bank Ltd., and Tokai Bank Ltd. Comanagers are: Banco di Roma, Barclays Bank PLC, Deutsche Genossenschaftsbank, Istituto Bancario San Paolo di Torino, Mitsui Bank Ltd., and Sanwa Bank Ltd.

Great Western Bank's commercial paper ratings are A1/P-1, and its unsecured long-term debt ratings are A/A2.

— Philip T. Sudo

Study of Public Finance Shows Few Fees for Commercial Banks

Continued from Page 8

most of its public finance operations. A Citibank spokeswoman said that Richard Stuart, division executive for municipals, was being transferred to the bank's global equities area.

Greenwich conducted its survey last September and October. At least two-thirds of the senior executives interviewed were questioned before the Oct. 19 stock market crash. The market debacle contributed to the abandonment of the municipal bond business at several investment firms, and left several issuers scurrying for new bankers.

Issuers most often turned to commercial banks when they wanted to sell competitive notes or use interest rate risk-management products. However, these services were among the least popular for issuers in general.

Only 4% said they used swaps and other risk-management products, while just 14% sold competitive notes. The most frequent swap users were utilities and health and education authorities, according to Greenwich.

The most popular investment banking services used by all issuers were negotiated bond sales, financial advice, and debt refunding. At least 60% of those surveyed used these services in the one-year period beginning fall 1986. Commercial banks, however, are effectively locked out of the negotiated market, which is usually linked to revenue bonds.

In a negotiated deal, an issuer works with one investment banker on structuring and distributing a security. By contrast, an issuer invites a number of investment banks to bid in an informal auction. A competitive issue, generally less remunerative than a negotiated deal, usually involves simpler transactions.

Only 17% of the issuers who offered negotiated bonds last year went to a commercial bank. This compares with 93% who consulted an investment bank. Since most issuers used a number of banks throughout the year, percentages are greater than 100%.

Other Findings

In other findings, Greenwich discovered that municipalities were the most frequent issuers of competitive bonds and notes. Utilities tapped the broadest range of investment banking services.

Greenwich prompted responses by giving executives a list of 55 firms, 17 of which were commercial banks. The respondents also had the opportunity to fill in other names.

Greenwich would not release names of specific banks. An official said the prompt list included money center institutions and superregionals.

According to Securities Data Co., only Citibank and Chase Manhattan Bank ranked among the top 15 lead managers of long-term municipal issues in 1987. Citibank was in 14th place and Chase was 15th. Each managed 32 issues with a value of about $1.8 billion last year. ■

Insurance Group Sells Receivables

By ANDREW ALBERT

NEW YORK — A small group of banks led by Continental Illinois National Bank and Trust Company of Chicago has purchased $150 million of insurance-related receivables from Reliance Group Holdings Inc.

The New York-based insurer declined to comment on the private transaction. A source said the bank group bought three different types of short-term receivables from Reliance, including agent balances and loans financing premium payments.

Bankers said the Reliance transaction was one of several receivables purchases completed by commercial banks before yearend. Free of disclosure requirements, such transactions can be arranged quickly to accommodate corporate clients making last-minute balance sheet adjustments.

Once the specialty of only a handful of major banks, including Continental, the receivables-purchasing business has recently attracted several newcomers. After purchasing loans, banks frequently turn around and sell the assets to a third party for a lower yield than they received.

A source said the bank group in the Reliance deal planned to hold the loans to maturity. Two of the three types of receivables bought were due to mature within about 90 days. The third set of receivables matures within a year.

Purchasing banks will receive a yield tied to the London interbank offered rate. The deal was structured as a one-time purchase, rather than a revolving credit facility in which a client can continuously sell receivables — up to a predetermined level — to its bankers. The transaction closed in December.

Reliance is by no means new to the asset sales game. In fact, it was the beneficiary of one of the year's more innovative securitized deals.

Last year, Manufacturers Hanover Trust Co. developed an off-balance-sheet method for Cannanwill Inc., a subsidiary of Reliance, to sell up to $160 million of receivables. ■

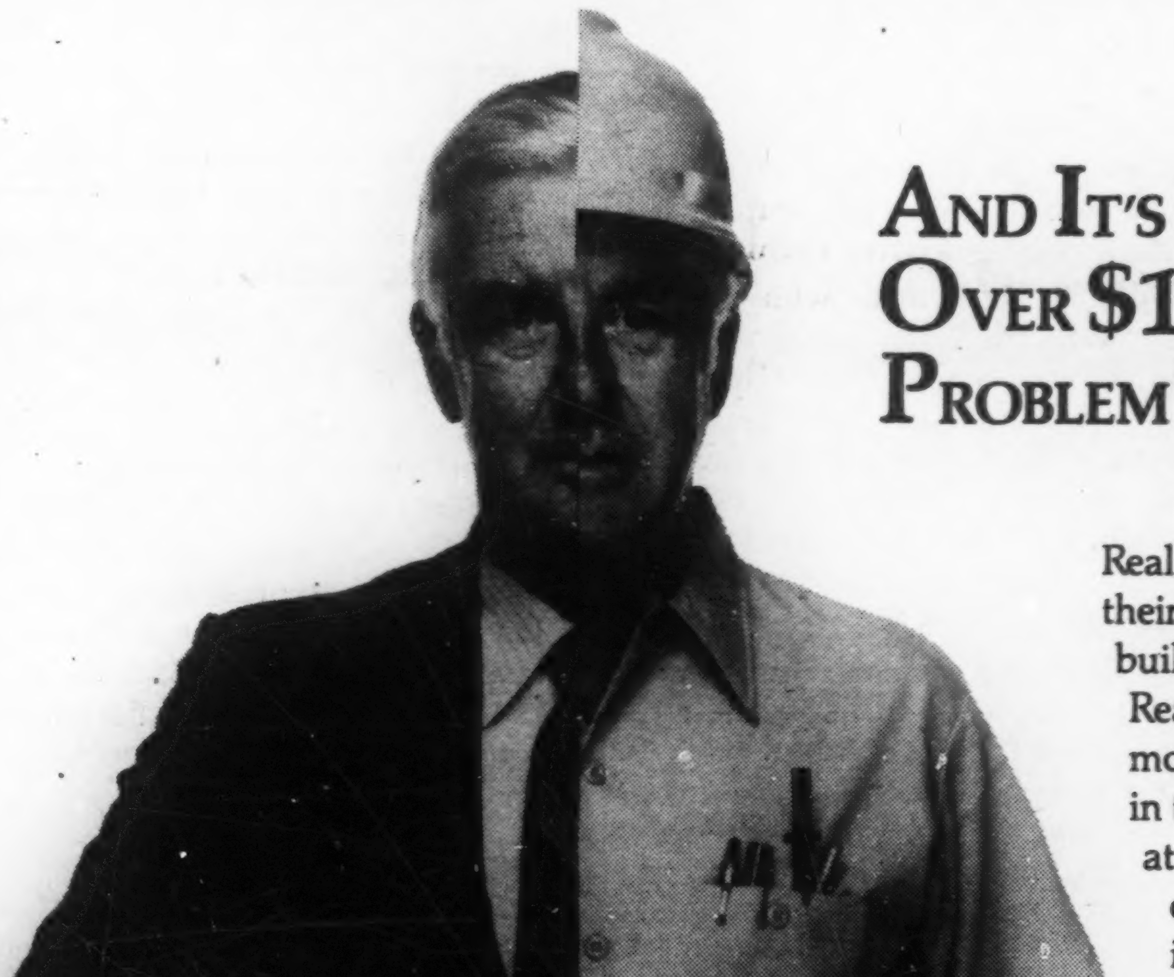
PEOPLE AT
AMERICAN REAL ESTATE GROUP
HAVE SPLIT PERSONALITIES

AND IT'S HELPED THEM SELL
OVER $1.6 BILLION IN
PROBLEM REAL ESTATE.



When you meet people from American Real Estate Group you won't know whether their backgrounds are in lending or in building. And, you'll be right. American Real Estate Group (AREG) is perhaps the most unique lender-owned real estate firm in the Country for that reason. People at AREG are hand selected for their combination of skills and experience in both the building and lending fields. As a result, our construction field people understand finance and our financial representatives know what a builder faces on a job site. With our builder/developer approach to real estate problem solving, you might say our people are the best of both worlds.

Thanks to the overwhelming success in the management and sales of our parent's own problem real estate projects, American Real Estate Group is now prepared to offer its expertise to other lenders. Mid-size banks and S & L's with problem projects in their portfolio will find AREG's expertise and cost efficiency is the solution that's been needed.

For more information, call 714-553-3730 and we'll send along a brochure with all the details. AREG people with "split personalities" have the solutions to your problems.

Mergers in 1987 Reach a Record $17 Billion in Value

➙ Continued from Page 1

record for the largest banking merger deal was shattered three times during the year.

These were some of the major moves on the banking and thrift merger scene in 1987:

- Several of the nation's emerging superregional banking firms, such as Virginia's Sovran Financial Corp., Ohio's Banc One Corp., and Pennsylvania's PNC Financial Corp., significantly expanded both the size and geographic coverage of their organizations.
- There were mergers among the superregionals. California's Security Pacific Corp. and Rhode Island's Fleet Financial Corp. struck deals that gave them a much larger presence in their home regions by yearend.
- Some superregionals that were among the most acquisitive in 1985 and 1986 — such as Boston-based Bank of New England Corp. — took the year off to focus on the consolidation and management of their enlarged organizations.
- In New York, two venerable banking institutions were engaged at the end of the year in an increasingly bitter hostile takeover battle. The outcome of Bank of New York Co.'s effort to acquire Irving Bank Corp. could have implications for future bank merger activity.
- Merger activity among thrifts was strong in 1987, especially in the Northeast and, more specifically, New England. The prospects are for more of the same this year.

Major Developments

But beyond all the maneuvering of 1987 there were two developments — one a trend and the other an event — that could affect the mergers landscape: the re-emergence of the merger-of-equals concept in bank acquisitions and the chaotic October stock market selloff.

The first began last March 18, when two well-regarded banking firms, Fleet Financial Group, Providence, R.I., and Norstar Bancorp, Albany, N.Y., announced that they would combine. The story was not that the $1.25 billion value of the deal was the highest price yet seen, but that it was little more than 1.5 times Norstar's book value and meant minimal earnings-per-share dilution for Fleet.

Analysts characterized the low premium as "reverse sticker shock" because of the significantly higher acquisition prices that had come to prevail in the industry, even for the largest combinations.

A pair of other large mergers of equals followed — the $1.34 billion deal between First Fidelity Bancorp., Newark, N.J., and Fidelcor, Philadelphia, announced on July 31, and the $850 million pact between Hartford National Corp., Hartford, Conn., and Shawmut Corp., Boston, unveiled on Aug. 26.

"It's significant that the merger of equals concept came back last year for big deals because its the only way, really, to expand," said one mergers specialist. "You've got to do them as stock deals and dilution from a full-fledged purchase price is just unacceptable in most cases."

Effects of the Crash

The other development came on Oct. 19, when the Dow Jones industrial average plummeted 508 points. Bank and thrift industry stocks were not spared from the carnage, of course, and the aftershocks from the event are still being felt and assessed.

The immediate impact of the crash was a distinct cooling of merger activity followed by the unraveling of some deals. The medium-term to long-term effects of the market's seizure may, in fact, be quite different. There may be more deals, and some of them may be unwelcome by the banks targeted for acquisition.

"When the acquirers' stock prices fell down, the capacity to make deals declined and the strategy for expansion changed," the mergers specialist noted. "It will mean more mergers of equals and perhaps that some deals will not be done because sellers feel their value is worth a higher price.

"But some of those reluctant seller institutions may be susceptible to hostile bids, or at least less-than-friendly approaches," he pointed out, "because their own stocks have fallen out of bed as well."

Whether friendly or unfriendly, some deals might happen sooner. Several analysts said they expect acquiring institutions to take advantage of the fact that stocks of some acquisition targets are now selling below book value.

"An acquirer might be able to pay a premium to the market price of a bank stock and still not exceed its book value," one observer said. "It's the chance of a lifetime to do deals without incurring goodwill. The opportunity may not exist in six months and some astute acquirers may want to move quickly."

Thrift Mergers

The market crash may have a particular impact on merger activity among thrifts. "Oct. 19 was important for thrifts because it brought down stock prices of targets, as well as of acquirers," noted John J. Lyons, managing principal of Lyon, Zomback & Ostrowski, the New York consulting firm to financial institutions.

"Prices had gotten outrageously high, and even well-capitalized thrifts could not afford to buy their brethren," he said, "but now the typical well-capitalized thrift can afford to spend some capital on one big cash transaction — that is, because it's cash, nondilutive."

"It's a different market," he said, "and there may be more deals this year among thrifts you would not have expected to do any deals. There will be some active, larger thrift institutions in New England that you would not have counted on surviving."

The $1.34 billion First Fidelity-Fidelcor merger was the year's biggest deal or offer by price. It was topped briefly by Bank of New York's $1.4 billion hostile bid for Irving, which was announced on Sept. 25.

First Fidelity-Fidelcor was No. 1 again after Nov. 20, when Bank of New York cut its offer to $1.25 billion in the wake of the market crash. Bank of New York's move put its bid into a tie with the $1.25 billion combination of Fleet and Norstar, which was completed on Jan. 1.

At a Glance: Deals of the Year

Dollar amounts in millions

	No. of Deals	Aggregate Price	Aggregate Equity	Aggregate Earnings	Avg. Price To Equity	Avg. Price To Earnings
1987	229	$17,145	$9,630	$1,216	1.8	14.0
1986	302	$16,714	$9,867	$1,008	1.7	16.8

Source: American Banker

The other billion-plus deal of the year just ended was the $1.150 billion acquisition of Rainier Bancorp., Seattle, by Security Pacific Corp, Los Angeles. The deal, which was completed in August, was among the most expensive in terms of acquisition premiums, too, with Security Pacific paying twice Rainier's book value.

The Fleet-Norstar and Security Pacific-Rainier deals were also significant because they were mergers among the emerging superregionals. The *American Banker* defines a superregional as a nonmoney center banking firm that ranks among the top 100 banking organizations in the nation in total assets and has merged across state lines to establish a full banking presence in another state.

Fleet's merger with Norstar vaults that combined company into the top class in its region, where it now ranks with Bank of Boston Co. and Bank of New England Corp. Security Pacific, meanwhile, has secured a commanding presence in the West with its Rainier acquisition.

The Highest Premiums

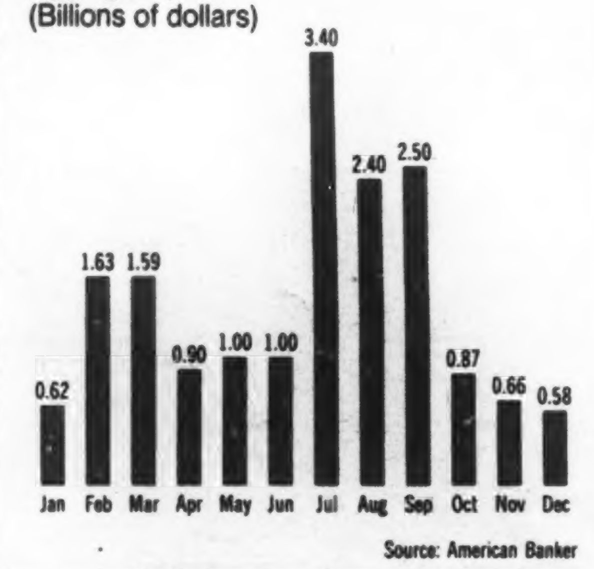
The double-book premium paid by Security Pacific, however, was far from the highest premium paid among the 10 largest deals of the year. Shareholders of First Jersey National Corp., Jersey City, N.J., will get three times book value in selling out to National Westminster Bank PLC, London.

That $820 million merger is scheduled to be completed on Feb. 1 and will be the first deal finalized between New York and New Jersey under New Jersey's new reciprocal interstate banking law. First Jersey is being acquired by National Westminster Bank USA, the New York-chartered subsidiary of Great Britain's largest banking company.

Among the top 10 deals of 1987, there were two others carrying substantial premiums. PNC Financial Corp., Pittsburgh, paid 2.5 times book in its $700 million agreement to acquire Central Bancorp., Cincinnati, and Sovran Fianncial Corp., Norfolk, Va., paid 2.2 times book in its $505 million acquisition of Commerce Union Corp., Nashville, which was completed on Nov. 1.

1987 Merger Activity

For banks and thrifts



Source: American Banker

The deals put PNC into a strong position in the neighboring state of Ohio and gave Sovran a major presence in Tennessee.

In the other major superregional extension of the year, Banc One Corp., Columbus, Ohio, expanded its coverage of the Midwest to Wisconsin. It acted as a white knight in the $546 million acquisition of Marine Corp., Milwaukee, which had rejected a higher bid from its local rival, Marshall & Ilsley Corp., Milwaukee. ■

Mpact Contest Brings Delayed Results

By JEFFREY KUTLER

NEW YORK — Mpact Mania, a three-month sweepstakes to encourage use of a major automated teller machine network, had the intended effect — but not until the campaign ended in early December.

Monthly transaction volume rose a disappointing 2% while Mpact Mania was in progress, according to Thomas R. Metz, executive vice president of MTech, Dallas. MTech, a subsidiary of MCorp, operates the 1,300-machine Mpact system in Texas and several other states.

Not until December was there a significant spike in volume, 7%, bringing Mpact to 7.3 million transactions that month.

"It looks like we had a delayed reaction," Mr. Metz said.

The first Mpact Mania promotion, four years ago, brought more immediate results, he said. But times were different then.

The Texas economy was healthier, and banks had not yet begun charging their customers $1 or more for using ATMs owned by other institutions. Those "foreign transaction" fees discourage the interbank volume that systems like Mpact were built to handle.

Mpact Mania's grand prize was $50,000. It was a random payoff on a $50 cash withdrawal by Mr. and Mrs. Cliff Hopper, from an Mpact machine at a Tom Thumb supermarket in Dallas. Mpact also gave away 32 Acapulco vacations and numerous restaurant and travel discounts.

Mpact also awarded free processing services to 18 banks that increased their ATM volume the most, reflecting their superior support for Mpact Mania.

Mpact Mania raised consumer awareness, Mr. Metz said. "But we found that what increases usage the most is demonstrations performed at the ATMs. One of our supermarket ATMs increased volume 24% within three months following a demonstration period." ■

Directors Buy Stock In Proposed Bank

PHILADELPHIA — The 13 directors of the proposed Republic Bank here have agreed to buy 149,423 shares, or 24.5%, of the minimum of 610,000 shares being offered directly to investors, according to Rolf A. Stensrud, president and chief executive officer. The shares are being offered at $8.50 a share, or $5.18 million.

The maximum number of shares to be offered directly is 900,000.

Following the direct offering, an additional 300,000 will be offered at $10 a share by Bailey, Martin & Appel Inc., of Philadelphia. Of these, 200,000 shares will be underwritten, 100,000 offered on a "best-efforts" basis.

Mr. Stensrud, 49, is a former senior vice president of Fidelity Bank here. He and also had been with the old Industrial Valley Bank and Trust Co. and Girard Bank. He said Republic would "project the image of a community bank and emphasize personal service" to small and medium-size businesses and professionals. It has received preliminary approval from the Pennsylvania Department of Banking.

The bank will be in the former first-floor office of Bank Hapoalim, Israel, which has moved to the second floor. ■

US Bancorp Acquires Peoples

SEATTLE — U.S. Bancorp, Portland, Ore., has completed its acquisition of Seattle-based Peoples Bancorp., according to a filing with the Securities and Exchange Commission.

U.S. Bancorp, a bank holding company, issued 2.6 common shares for every Peoples Bancorp. share tendered, according to the filing. ■

Lenders Fine-Tune Strategies for '88

➜ Continued from Back Page

niche by targeting franchisees who decide they want to open operations outside their home areas. "A regional bank might be a little reluctant" to make such a loan, he said.

Other companies are looking to enter the field, such as a franchise funding unit of Citicorp and Franchise Finance Corp., an independent company that arranges equity and debt financing packages and passes the tax advantages on to investors.

Road Repairs Loom

On another front, roads that were built in the 1950s and 1960s have deteriorated, with states and municipalities only now realizing that their highways must be repaved or perhaps replaced.

"Sooner or later, someone has got to recognize that the infrastructure of this country is deteriorating," said Mr. Focareta, explaining the attention his company is devoting to road repair.

"Typically, we're a company that will go to the end user — like the construction company that wants to buy a bulldozer," said Mr. Focareta. "We'll do it by knocking on the doors of the end users. If at times we have to go a little beyond the loan, we will." That might mean arranging receivables financing or offering another financial service to the construction firm.

While he acknowledged it is a very competitive business, Mr. Focareta says openings exist because many companies exited several years ago, when little road repair work was being done.

"Back 5, 10, or 15 years, when you talk about asset-based lending, road construction is where you were," he said. He added that about 60% of Westinghouse's business traditionally was related to road construction. ■

MasterCard Completes Acquisition of Cirrus

Card Issuer Plans to Use Name in ATM Network, Replacing MasterTeller Logo

By YVETTE D. KANTROW

NEW YORK — MasterCard International Inc. on Friday completed its acquisition of Cirrus System Inc., the nation's largest shared automated teller machine network.

The price was not disclosed, but earlier reports placed the value of the transaction at $38 million. Under the purchase agreement, Cirrus becomes a wholly owned subsidiary of New York-based MasterCard.

Cirrus is based in Downers Grove, Ill. It will continue to operate as a separate entity with its own management team and a board of directors chosen from its members. Russell E. Hogg, president and chief executive officer of MasterCard, will join the Cirrus board.

The network of 18,500 ATMs was owned by NBD Bancorp, Detroit; BayBanks Inc., Boston; First Interstate Bancorp, Los Angeles; Mellon Bank Corp., Pittsburgh; Bank of Montreal; and Norwest Corp., Minneapolis.

About 3,400 U.S. and Canadian financial institutions participated in Cirrus as of yearend 1987. Cirrus expects to have 30,500 ATMs, 4,300 member institutions, and 116 million eligible cardholders by the end of 1988, with much of the growth resulting from the merger.

MasterCard announced its agreement in principle to acquire Cirrus last September. The card issuer said it would use the Cirrus name on its worldwide network of ATMs, replacing its current MasterTeller logo. As MasterTeller members apply for Cirrus membership, the Cirrus network could gain approximately 8,300 machines.

The Cirrus network would then extend into Alabama, where it was not previously represented, and beyond the United States for the first time.

NBD Bancorp will continue to operate the ATM network's switch for another three years, according to Cirrus president Bruce A. Burchfield. After the contract with NBD expires, it is likely that MasterCard will take over the telecommunications responsibility.

"Most of Cirrus' members are connected to NBD already," Mr. Burchfield said. "To move it now would be the most move to advance the least."

The link between the two networks will be operational within this quarter.

With MasterCard's purchase of Cirrus, both major nationwide ATM networks are now affiliated with a bank credit card association. Visa U.S.A., San Mateo, Calif., purchased a minority interest last year in Plus System Inc. for $5 million. Visa has an option to acquire Denver-based Plus outright, but has said it does not anticipate taking that step.

Visa did decide to offer ATM services internationally using the Plus name and logo. This could double the size of the Plus 18,000-machine ATM network if all Visa members worldwide adopt the Plus identity. ■

Connecticut Thrift Asks Merrill Lynch to Help Find Suitors

By LINDA ELLIS

NEW YORK — Northeast Savings, Hartford, Conn., has asked its investment banker to find a buyer for the $6.8 billion-asset thrift.

Kent Dixon, Northeast's chairman and chief executive officer, said the board has directed Merrill Lynch Capital Markets to "explore strategic financial alternatives to maximize stockholder value."

While it is not clear whether this is the best time to sell Northeast, the thrift already has "several possible candidates" for buyers, said Mr. Dixon. A sale will not take place unless the purchaser, the terms, and the price are appropriate, he added.

Northeast lost $5.3 million in the quarter ended Sept. 30, down from earnings of $7.2 million for the period in 1986. The company took a one-time charge of $5.5 million in the 1987 quarter for restructuring, including the sale of 17 unprofitable branches and a reduction in overhead.

For its fiscal year ended March 31, the thrift earned $33.2 million, down from $37.8 million the previous year.

Discussions with investor Abraham D. Gosman had reached a holding pattern, but Mr. Gosman declined to accept a tentative standstill agreement with Northeast after he learned the board is considering alternative buyers, Mr. Dixon said. Mr. Gosman and family members own 9.8% of Northeast stock and have regulatory approval to buy up to 35% of the thrift's common shares.

Mr. Gosman is traveling and could not be reached for comment.

In October, Northeast adopted a shareholder rights plan designed to protect against hostile takeovers. On Dec. 29, four shareholders filed a class-action suit against the company, charging the antitakeover plan was not in the best interest of shareholders. ■

Citibank South Dakota a Major Participant in Swap Market

➜ Continued from Page 8

charges of between 18% and 21%, the bank is able to lock in quite sizable spreads, especially in today's environment, where the six-month London interbank offered rate hovers at about 7.5%, and two-year Treasury note yields are about 7.8%. Citibank's goal is to make sure that the floating-rate payment it receives offsets its own cost of raising funds for the credit card portfolio.

In an environment of rising rates, Citibank South Dakota may stand to profit because the floating-rate payment generally increases at a faster rate than the cost of its funds.

The strategy used by Citibank is not the only one available for managing credit card portfolios. For instance, a bank that finances its credit card receivables with medium-term notes, such as three-year instruments, would then want to arrange a swap in which it could receive three-year money to help pay its funding costs. This institution would then pay the floating side of the transaction and receive the fixed rate.

Many other banks said they aggressively hedge their credit card portfolios with swaps, but figures are not available for each institution.

"There are a variety of synthetic instruments that can help a bank fund, at a favorable interest rate, the maturity of its credit card portfolio, and swaps are one of those which is used fairly well," said Robert Rosholt, treasurer of First Chicago Corp.

"The real key a bank has to know is what interest rate sensitivity it has. It uses swaps to match that sensitivity."

CONSUMER FINANCIAL SERVICES

Credit card affinity groups are getting bigger, despite evidence that this bank marketing trend has passed its peak of popularity. Researchers find that consumer response to solicitations is rapidly diminishing, but banks are trying to offset the lower response rates by defining the affinity groups more broadly. ________ 2

Institutions that sell private banking services to affluent customers have attracted the wrong people — most wealthy clients are more interested in low-cost loans than in high-priced services, according to Payment Systems Inc. ________ 2

Dollar Dry Dock Savings Bank, a White Plains, N.Y.-based thrift, has adopted an innovative retailing strategy and hired a manager with retail merchandising experience. ________ 6

Marketers in the financial services industry are increasingly turning to the wealth of computer-massaged demographic and psychographic information to serve existing customers and to identify new prospects. ________ 7

INSIDE

Hawaii's major utility has taken a big step into the financial services business by agreeing to acquire the state's second largest savings and loan association. Hawaiian Electric Industries Inc., parent of Hawaiian Electric Co., said it would pay $112 million for American Savings Bank. ________ 2

Some money center banks would have to set aside more than $2 billion to match the loan-loss reserves established by leading regionals to cover Third World debt, according to a study by the bank stock firm of Keefe, Bruyette & Woods Inc. ________ 3

Special provisions to offset potential losses on Third World debt hurt the fourth-quarter results of National Westminster Bank USA, New York, and the Bank of New England Corp., Boston. ________ 3

Bond-for-debt swap plans like the one envisioned by Mexico and J.P. Morgan & Co. must offer bankers more repayment guarantees if they are to succeed, according to the Brookings Institution. ________ 3

COMMENT

Marketing Management: To combat the rising cost of sending people to conferences, many banks are setting up their own in-house educational programs, writes consultant Michael P. Sullivan. ________ 4

Payment-System Glitch Complicated Stock Crash

Brady Report Cites Wire Transfer Shutdown as One Factor in Market Turmoil

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — On the day after Black Monday — when the financial system was on the verge of collapsing and huge amounts of cash were being shuttled between New York and Chicago — a critical link in the nation's funds-transfer system suddenly shut down for two hours.

The snafu occurred at a critical time: Billions of dollars were being moved out of New York to meet margin calls on Chicago's futures and options exchanges. The midday halt came at the height of the crisis, when chaotic trading was threatening to close the New York Stock Exchange.

The impact of the computer glitch is disputed. Federal Reserve officials are downplaying the incident. But the presidential commission appointed to study the market crash has suggested that the delay was one of several interruptions in the flow of funds to Chicago banks that contributed to problems in the market and could have led to default by one of the market's clearing houses.

Fed officials say the breakdown, which was brought to light in the commission's report, was triggered not by excessive volume, but by a bank that entered a lengthy electronic message — an instruction to transfer funds — into the central bank's Fed Wire system. That message unveiled a previously undetected glitch in the programs that run the Chicago Fed's computers. The Chicago link shut down Tuesday, Oct. 20, between 10 a.m. and 12:30 p.m. central time, just as the market turmoil was peaking.

Among many market factors cited by the commission's report were the Fed Wire breakdown and new central bank rules limiting intraday overdrafts in accounts banks hold at the Federal Reserve. These so-called daylight overdrafts occur when banks transfer customers' funds to other banks with the expectation that the deficits will be covered by incoming funds later in the day. The Fed has established a system of caps under which a bank's overdraft limit is determined by its capital and other factors.

The commission said that the overdraft caps nearly created "gridlock" in the payments system during the crisis.

Citicorp Shuffles Staff Within Its Institutional Bank

By JED HOROWITZ

NEW YORK — Citicorp, barely pausing after reorganizing its investment bank, is engineering a number of changes in its corporate banking sector, known in company jargon as the institutional bank.

The changes, announced in an internal memorandum last Friday, center on the North American finance group, the corporate bank's most profitable division.

Jeffrey Grandy, 48, takes star billing in the reorganization, moving from the top spot at the bank's real estate industries group to lead its corporate and asset-based finance division. The unit, which has more than 1,500 staffers, in-

Bank Firm Uses State Charter Loophole To Expand into Suburbs of Chicago

By ANDREA BENNETT
Midwest Bureau

CHICAGO — A Chicago bank holding company has circumvented statutory restrictions on branch banking by using an Illinois regulatory policy to expand its presence in suburban markets.

Exchange International Corp. is the first to use an Illinois provision that allows a bank holding company to buy a "less active" Illinois bank charter and relocate that bank elsewhere in the state.

Under the Illinois regulation, which applies only to state-chartered banks, one bank can purchase and assume most of the assets and liabilities of a second, which then has a less-active, but still operating, bank charter. That charter can, in essence, be put on the shelf and sold to another bank. Illinois regulators said there are no restrictions on where in the state a purchasing bank can move a bank charter.

Exchange, parent company of the $2.1 billion-asset Exchange National Bank, said Tuesday it bought the charter of the Farmers' State Bank of Sheffield in western Illinois and plans to use it to open a bank in Du Page County, a fast-growing Chicago suburban area.

"This is the first time that a less-active charter has been sold and [will be] reactivated," said William Conaghan, Illinois deputy banking commissioner. "I can assure you we will see more in the future."

Since mid-1986, when Illinois loos-

Bank Fined on Boycott Rules

WASHINGTON — The Department of Commerce said it fined American National Bank and Trust Co., Chattanooga, Tenn., $33,000 for violating antiboycott provisions of the Export Administration Act. The act requires U.S. companies to report any requests for restrictive trade or boycotts. The department says American National failed to report promptly 22 receipts between January 1983 and June 1984 from Kuwait that asked the bank not to conduct business with Israel. American National agreed to pay the civil penalty but did not deny or admit the violations.

Chemical Officer in London Quits

LONDON — Chemical Bank's London-based managing director for international banking and corporate finance activities, John Howland-Jackson, is resigning to pursue other interests. Mr. Howland-Jackson joined Chemical in October 1986 from Kleinwort Benson Ltd., where he had been head of global capital market activities. Mr. Howland-Jackson was one of Chemical's two top operating officers in London.

Sources said the resignation was tied to pending changes in the business strategy of the London branch. Mr. Howland-Jackson could not be reached for comment.

Union Buys Stake in Bank

CHICAGO — Teamsters Local 705 has completed an agreement to purchase a 14% interest in Amalgamated Trust & Savings Bank, a $300 million-asset Chicago bank with strong union ties. The purchase price was not disclosed. Local 705, which represents truck drivers, oil drivers, filling station employees, and platform workers, will be Amalgamated's second largest stockholder.

Citibank Upgrades in Portugal

LONDON — Citibank is upgrading its Portuguese branch into a subsidiary with full commercial banking status to participate more fully in that country's capital markets, a spokesman said. The new bank, Citibank SA, has received approval from the Portuguese finance ministry and is scheduled to begin operations on Friday.

Citibank is the second U.S. bank to create a subsidiary with full banking status in Portugal, following Manufacturers Hanover SA, a unit of Manufacturers Hanover Corp.

Westinghouse Unit Buys Stock

CHICAGO — Westinghouse Financial Services has acquired 20% of the common stock of Mesirow Financial Holdings Inc., the two parties said. The terms were not disclosed. Westinghouse Financial is the parent of Westinghouse Credit Corp. of Pittsburgh, a diversified business finance company. Mesirow, based in Chicago, is a financial services and investment banking firm.

Pacific First Sells Mortgage Unit

TACOMA, Wash. — Pacific First Financial Corp. said it has agreed to sell its mortgage servicing operation in Walnut Creek, Calif., which has a $2.3 billion portfolio, to Commonwealth Mortgage America, Houston. The parent of Pacific First Federal Savings Bank and Pacific First Mortgage Corp. said the sale will generate about $33 million in cash.

Money Centers Lag in Loan-Loss Reserves

By JOHN P. FORDE

NEW YORK — Some money center banking companies would have to set aside more than $2 billion to match the loan-loss reserves established by leading regionals to cover Third World debt, according to a study by Keefe, Bruyette & Woods Inc.

For comparison, the study used Security Pacific Corp., Los Angeles, which has boosted its reserve to about 54% of its nontrade-related exposure to developing countries.

SecPac Makes Major Provision

On Monday, Security Pacific said fourth-quarter results would include a $350 million special provision in connection with loans to Third World countries.

The provision will result in a $40 million loss for the quarter, the company said, placing earnings at about $15 million for the year.

Combined with special provisions made previously — $558 million in the second quarter and $150 million in the third quarter — the latest action raises Security Pacific's reserve allocated to Third World debt to about $980 million.

The Keefe Bruyette study shows that several of the largest regional firms have higher percentages in reserves than Security Pacific. Others, such as Bank of Boston Corp., have similar percentages in reserve.

Money Centers About 25%

Money center banking companies have followed the lead of Citicorp, which raised its Third World loan-loss reserve in May to about 25% of its total LDC debt. At the time, Citicorp's move was hailed as a major breakthrough, signaling attempts to evaluate more realistically the actual risk posed by Third World loans.

According to the study, BankAmerica Corp., San Francisco, would have to set aside almost $3.1 billion to boost its reserve to 54% of its exposure. Citicorp would have to add $3 billion to its reserve to cover that percentage of its Third World debt.

Regional firms with reserves representing more than 54% of their nontrade-related Third World debt include Bank of New England Corp., Boston, and PNC Financial Corp., Pittsburgh. ■

Loss Provisions Mar Results at NatWest And Boston Bank

By JOHN P. FORDE
and MICHAEL WEINSTEIN

Special provisions to offset potential losses on Third World debt hurt the results of National Westminster Bank USA, New York, and Bank of New England Corp., Boston, in the fourth quarter.

National Westminster lost $46.4 million in the fourth quarter because of a $75 million addition to its reserve against potential losses to countries with severe debt servicing problems.

Bank of New England Corp. on Wednesday reported a drop in fourth-quarter and yearly earnings compared to last year, because of special provisions in 1987 to cover possible loan losses to lesser-developed countries.

NatWest's loss compared with net income of $17.9 million for the fourth quarter of 1986. For all of 1987, NatWest lost $212 million, primarily because the company set aside $295 million against possible losses on lesser-developed-country loans during the

Debt Swap Plans Need Guarantees To Attract Banks: Brookings Study

By JIM McTAGUE
Washington Bureau

WASHINGTON — Bond-for-debt plans like the one developed by Mexico and Morgan Guaranty Trust Co. must give bankers more repayment guarantees if they are to succeed, according to a paper released by the Brookings Institution.

Under the Morgan plan, Mexico would swap its debt at a discount for 20-year bonds collateralized by zero-coupon U.S. Treasuries. Creditor banks are expected to receive from 50 cents to 70 cents on the dollar for their loans if they participate in the plan.

Though banks would be assured of receiving the bonds' principal because of the collateral, interest payments would depend on Mexico's ability to service its debt, which might make bankers reluctant to buy the bonds, according to the authors of the paper, Jeffrey Sachs and Harry Huizinga, Harvard University economics professors.

The economists, who analyzed various proposals, suggest a program to allow banks to exchange foreign debt for a bond with the same face value but a below-market coupon rate. Such a swap would allow banks to avoid debt writedowns until they sold the bonds in the secondary market, they said.

Since the stock markets already have discounted bank stock to reflect Third World loans, bankers should be willing to swap the debt for a safer instrument, according to the paper from the independent research organization.

The swaps would be conducted through a facility of the World Bank or some other organization that would accept exit bonds from the debtor nations and at the same time swap its own bonds with debt held by commercial banks. The bank debts would be erased at that time.

Each creditor country would participate in the international debt facility in proportion to its banks' exposure in the problem countries. The costs to the creditor countries would be modest, the professors said.

U.S. banks held approximately $57 billion in claims against governments

MARKETING MANAGEMENT

Bringing Banker Education 'Within the Walls'

By MICHAEL P. SULLIVAN

THEY DON'T educate and train bankers like they used to. In fact, if you read this newspaper, you will find that a number of commercial banks take a different tack when looking at the organizational imperative to train and educate bankers. Assume for our purposes that banker education includes anything in the annual budget spent on classroom instruction — banker schools, conferences and workshops, and annual conventions.

At a number of banks today, the party line is that the bank is in an austerity mode and attendance is being cut for bank employee attendance at external meetings. But, with recent trends in the industry, there may be a lot more to it than that. A lot of soul-searching is going on in the executive suites about the value of external meetings. The chief executive at one major regional bank says his organization is giving up attendance at national and regional meetings for at least a year.

After a one-year hiatus, bank employees will provide the organization with a report of what they and the bank missed by not attending the conference or school. The idea, a clever one for the bank seeking to cut expenses, is that bank employees will not have an adequate rationale for what their bank lost by not having them attend and they won't be able to justify attendance. The profitability of this bank could be enhanced by as much as a million dollars a year. Likely, bank employees will be hesitant to ask to go to meetings in the future.

Sullivan Says:

The cost of sending a banker halfway across the country to a banking school for two to three weeks over a period of several years can be sizable. So the bank creates its own school.

Quite a number of banks have issued instructions to employees: If it doesn't contribute to the bottom line in the next six months, don't bother to ask. If this move by a few becomes commonplace, pity the banking associations that depend on high-return conferences to carry the many low-return services they offer. There could be more mergers among banking associations than among banks in 1988.

Quality education and training of bankers is performed by others, not just industry associations. A number of commercial enterprises provide banker educational programs. In fact, some of the best leading-edge educational formats and programs come from private firms, offered either as a mainline activity or as an adjunct to another business such as consulting, publishing, or information processing. They, too, are under pressure in this banking environment.

I call this emerging trend "banker education within the walls." It is easy to see why this form of intramural education is becoming popular. The cost of sending a banker halfway across the country to a banking school for two to three weeks over a period of several years can be sizable. So the bank creates its own school.

The Banc One College in Columbus, Ohio, is run twice a year for executive management of its operational units. Faculty for the two-week school are top-notch academicians and banking consultants. And, the bank doesn't stop there. Internal seminars are held for bank employees on popular subjects, such as sales management.

The benefit, as far as the bank is concerned, is that a greater number of its employees can be part of a significant educational process than could attend a national meeting. Even better, the programs can be specific to Banc One — a decided advantage, the bank believes.

Sovran Bank in Virginia conducts a 10-month fast-track program for its entry-level management associates, but with a new twist. The program is run for the bank by banking faculty members from Virginia Commonwealth University in Richmond. The program creates greater return for the bank because students work in teams on a significant banking project and at the end of the program they present solutions to senior bank executives.

Mellon's Approach

Mellon Bank, Pittsburgh, runs three levels of in-bank education. The first is corporate-wide and includes skills building. For its correspondent banks, it runs the Mellon Concentrated Course in Banking. The program for newly appointed officers of correspondent banks is a two-week residential course.

The second level is cross-departmental, sponsored by such groups as marketing. It conducts a forum twice a year to provide marketing education for its affiliate banks, especially for line bankers. A combination of inside and outside faculty are used.

At the third level, it runs job-specific, technologically based programs. Mellon's Master Trust University and Cash Management University are two programs that are widely publicized in the banking industry.

In addition, Mellon's physical facilities for in-bank programs are equipped with the latest in training resources, including video options.

First Union National Bank, Charlotte, N.C., believes that if you are going to develop a strong institutional sales culture, then you need to act like a strong national sales-driven organization. It conducts an annual sales conference for hundreds of bank employees that rivals national sales meetings by Avon, IBM, and Chevrolet for its intensity and motivational and informational content.

The popularity of in-bank training has led to the formation of a new trade association as a central reference location for bank trainers. The Association of Bank Trainers and Consultants, New York City, conducts conferences and forums and provides data and other information.

While banker education within the walls appears to be a growing phenomenon among mid- to large-size banks, it is not as popular among small banks that cannot afford a full-time staff. They seem to rely more on external bank trainers who provide training at the bank for employees or participating in programs conducted by the state banking association or other regionally based trainers.

Perhaps banking associations and other providers of in-residence training programs ought to look more closely at alternatives to traditional ways of delivering services, such as taking their schools "inside the walls" of a number of commercial banks. ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible.

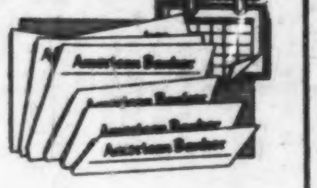
In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers.

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reasons of space and clarity.

We need your views to be a true community newspaper.

FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

• Chase National Bank's annual report revealed the bank handled the largest volume of business in its history in 1947. Chase's net earnings were $19.8 million, or $2.68 a share.

• The President's Economic Report to Congress commended leaders of the commercial banking system for their "far-sighted action" in curtailing an "inflationary expansion of bank credit."

20 Years Ago

• Credit card sales of banks participating in the national BankAmericard system amounted to $459 million in 1967, its first full calendar year of operation, according to Vern C. Richards, president of BankAmerica Service Corp.

• U.S. exports in 1967 rose 5.5% and imports rose 4.5%, boosting the U.S. trade surplus to $4.3 billion for the year.

10 Years Ago

• The Ford City Bank & Trust Co., Chicago, announced it would offer diamonds as interest on four-year savings certificates. The bank offered the gems unset at wholesale prices, and promised to "refund the deposit for any customer who is not satisfied, and to reimburse such a customer for the cost of the appraisal."

• The Federal Reserve Board was considering implementing its two-year-old proposal to permit automatic transfers between savings and checking accounts. The proposed regulation had sweeping competitive and political implications because it would allow customers of Fed member banks to receive interest on most checking account deposits.

• Saying his presence could be a "complicating distraction to a new chairman," Federal Reserve Board Chairman Arthur F. Burns told President Carter he would not continue as a Fed member beyond March 31.

• Bank stocks declined across a wide range following a general market trend led by the drop in the Dow Jones industrial average of 55.27 points over the week.

5 Years Ago

• Officials of 35 Western and Japanese banks established a private global organization to help lenders judge the creditworthiness of countries seeking loans. The Washington-based Institute of International Finance Inc. was to be funded solely by dues from banks wishing to use the organization's services.

• Most of the nation's largest banks dropped their prime rates to 11% from 11½% amid renewed optimism of lower market rates and an economic upturn that was expected to gather steam in the early part of the year.

• Century 21, the nationwide real estate brokerage firm, announced its entry into the financial services field with the establishment of subsidiaries for mortgage brokerage, property insurance, and sales of real estate limited partnerships.

• The financial community's ongoing battle against tax withholding provisions on interest and dividend income gained strength on Capitol Hill, where members of Congress were receiving hundreds of letters a day urging the repeal of a law that would require financial institutions to withhold 10% of investors' interest and dividends.

1 Year Ago

• The Supreme Court upheld the right of national banks to establish interstate brokerage branches, a decision bankers expected to encourage development of nationwide securities businesses by commercial banks.

• A federal appeals court denied a rehearing sought by the Securities and Exchange Commission to force banks to register their securities subsidiaries with the agency as broker-dealers. The decision reduced the burden of regulation that had deterred some banks from entering the discount brokerage business.

Bank Investments in Mortgage Securities Soar

By L. MICHAEL CACACE

NEW YORK — Commercial banks and thrift institutions continued last year to increase substantially their holdings of mortgage securities. However, the growth in these investments at commercial banks was four times faster than at thrifts and three times faster than the growth in the total supply of these securities.

Exemplifying the growth in mortgage security investments is New York-based Chemical Bank. Chemical was the No. 1 bank in mortgage security investment. Its holdings of these securities rose almost ninefold to $3.7 billion on June 30, 1987, from $387 million a year earlier, when it ranked No. 11 in these investments.

A Chemical spokeswoman said, "Most of the portfolio was bought in the latter part of 1986, because of the historically wide spread between these securities and Treasuries."

(During the last quarter of 1986, the yield on Government National Mortgage Association securities expected to mature in 12 years exceeded the yield on 10-year Treasury securities by 151 to 163 basis points.)

Several factors contributed to the sharp growth in investment in these securities last year. First, alternative investment opportunities for banks were slim. For example, business loans grew a modest 4% last year, and consumer loans rose by less than 3%.

Second, tax law changes removed municipal bonds as candidates for addi-

WASHINGTON BRIEFING

New Bank Powers May Be a Weapon In Community Reinvestment Act Battle

By JAY ROSENSTEIN

WASHINGTON — Members of Congress are beginning to stockpile some of the ammunition they will use this year in the fight to strengthen the Community Reinvestment Act.

An Insider's Guide
To Capital Issues

The 1977 law requires federal regulators to take into account the community reinvestment record of banks and thrifts when those institutions apply to expand, such as through branching and mergers. Community groups also have the right under the law to challenge applications from institutions they sense have not met their community reinvestment obligations.

In the next week or so, federal regulators are expected to respond in writing to a lengthy request from Senate Banking Committee Chairman William Proxmire, D-Wis., for details about how the agencies are enforcing the law. Some observers say the results may show the agencies enforcing the letter of the community reinvestment law, but casting doubt on enforcement of the spirit of the law.

Consumer and community representatives say the law needs to be toughened. They claim that enforcement by the regulators to date has been lax. They add that if banking powers

Hostile Bid For Centerre Termed Low

Special to the American Banker

ST. LOUIS — Banking analysts expect Centerre Bancorp. to reject the unsolicited $260 million takeover offer made last week by United Missouri Bancshares Inc., a smaller cross-state rival.

Mergers, Acquisitions

The offer, which has baffled some bankers and analysts, amounts to only slightly more than Centerre's market value and a 25% discount to book value.

Centerre's board has "no reason to sell" at the offered price, said Kenneth F. Puglisi, a vice president with the New York securities firm of Keefe, Bruyette & Woods Inc. United Missouri's attempt at a "bear hug at market prices just doesn't make sense," he said.

Family Stake

R. Crosby Kemper Jr., chairman of United Missouri, set a Wednesday deadline for Centerre to respond to the offer, which was made late last Thursday. A Centerre spokeswoman said the company's board would meet before the deadline.

Mr. Kemper, members of his family, and United Missouri control about 8% of Centerre's stock, the chairman said. He and his family obtained much of their stock in the early 1970s after selling two Missouri banks to Centerre.

During an interview on Friday, Mr. Kemper termed hostile bank takeover attempts "unfortunate." He said he wanted "a friendly merger" but added that Centerre's chairman said "he was shocked" when informed of the offer. Mr. Kemper declined to comment on whether he would pursue a hostile tender offer if Centerre rejects the initial bid.

Centerre's stock opened higher Friday on speculation that Mr. Kemper

BANKING TRENDS

Foreign Ownership Is Price We Pay for Buying Goods Made Abroad

By DR. PAUL S. NADLER

AT EVERY LECTURE and discussion where there is a question period, I get one inevitable query: "What's going to happen as foreigners buy up more and more of the United States?"

It is not hard to see why this is a major concern. Every day we read about Japanese and others buying land, hotels, office buildings, and even banks when they can.

The worry of bankers and other business people everywhere in the nation is whether these foreigners will start controlling our country and make things more difficult for Americans.

There are answers to this question, however, that should calm reasonable people, even though some of the answers are not as pleasant as we would like.

First and foremost, they have a right to buy America. After all, they sold us goods and services. We paid for them with dollars, which they have a right to use. They don't want to keep the dollars in a museum in Yokahama.

For a while foreigners used most of their dollars to buy U.S. government securities and thereby finance our budget deficits. But as the dollar's value dropped in half, or even more, relative to their currencies, they decided this was not a very smart policy.

That is why the foreign supporters of the U.S. dollar now are not private dollar holders but rather official groups like central banks and governments. The private holders have decided hotels and office buildings are real assets whose value has more stability than U.S. dollar fixed-income investments.

Buying into Foreign Ownership

In addition, they feel that the U.S. is the most stable governmental system in the world, so fixed investments here should be far less risky than those elsewhere. This is especially true of Europeans who fear Russian intervention or expropriation of their buildings and other fixed assets by socialists in their own countries.

So foreigners use their dollars to buy America. They only own a small part — some have estimated as little as 3%, which is far less than the 6% of European assets Americans owned at our peak a decade or so ago. Yet this is a major worry to many in my audiences.

So when the question of foreign ownership in America comes up, I respond: "What kind of car do you drive?" Almost invariably the question plays right into my hand.

"A Mercedes," he replies, or "I drive a Toyota."

"The defense rests," I conclude.

In other words, if we want foreign goods in preference to our own, foreigners have a right to use the proceeds to buy our goods. We created our own problem.

But is this really dangerous to America? Should we worry that foreigners are buying more and more of our buildings, setting up manufacturing companies here, and otherwise making "direct investments" in the United States?

To the contrary, this is good.

Nadler Says:

If the foreign investor becomes antisocial, he will quickly find his properties subject to control.

First, think of the people who sell the facilities or those who are put to work erecting the plants and making the equipment that foreigners buy.

The sellers of the land, the people employed to make a Japanese auto factory in Kentucky, are not unhappy. They have jobs, income, profits. Whether the dollars come from Japanese, Chinese, or Eskimos makes little difference to them — the dollars are green.

Second is the issue of whether foreign owners of U.S. facilities are going to be good citizens. Again the answer is positive. Why would someone invest money in facilities to wreck them? The foreign owners of U.S. plants, hotels, and buildings want them to be successful so they can earn profits.

Vested Interest

In fact, having U.S. investments makes them more solicitous of our country than they otherwise would be, for they have a dollar-and-cents reason to want us to prosper. It is like the man who always flicks his lighted cigarettes off his terrace except when his own convertible is parked underneath.

Third, the U.S. government will not allow foreigners to be poor citizens of our economy. We know governments take precedence over individual owners of plants and other assets in today's world. There are no more "banana republics," under which the government is owned by the major manufacturer, as was the case when banana companies owned many Central American governments and ran them for the benefit of the company instead of the people.

We saw that with our investments in oil development in the Middle East. The investments of American companies meant little when they were expropriated by the governments. In a

OVERVIEW

Silence May Not Be Golden for Alan Greenspan

By H. ERICH HEINEMANN

ALAN GREENSPAN took the oath of office as chairman of the Board of Governors of the Federal Reserve System almost six months ago. Since that time, Mr. Greenspan has had little to say in public about monetary policy. Because other members of the Fed have continued to be outspoken in expressing their views, rightly or wrongly, some analysts are starting to question the quality of Mr. Greenspan's leadership.

His actions, by contrast, have provided a clear view of a conventional, if troubling, approach to the art of central banking. The Greenspan Fed, like the regime under former Chairman Paul A. Volcker, appears to be primarily concerned with trying to fend off both existing and potential inflation.

As befits the proprietor of one of the world's leading currencies, Mr. Greenspan suggests through his actions that if necessary he would defend the dollar at the cost of a recession. (Martha R. Seger, the leading advocate of easy money on the Fed Board, charged last week that a recession is likely during 1988.) Meanwhile, manipulating short-term interest rates continues to be the central bank's preferred technique for achieving its targets.

Early last year, Mr. Volcker initiated an abrupt shift in Fed policy from easy money to tight. The growth rates of total bank reserves and the money supply, which had risen at a record pace in 1985 and 1986, dropped faster and further than in any other period since World War II. At the beginning of September, Mr. Greenspan accentuated Mr. Volcker's tight policy by boosting the Fed's discount rate by half a percentage point to 6%.

When this action backfired and helped trigger the October stock market crash, Mr. Greenspan issued a statement that "The Federal Reserve, consistent with its responsibilities as the nation's central bank, affirmed today its readiness to serve as a source of liquidity to support the economic and financial system."

Heinemann Says:

If the dollar does stabilize within a narrow trading range, the Fed is likely to restart its printing press well in advance of the November election.

For a brief period, the Fed appeared to relent and pump fresh cash into the credit markets at a rapid rate.

This return to accommodation lasted only a couple of weeks. By the end of the year, total bank reserves (the raw material for the money supply) were once again well below the level of late October and were even lower than in April. Interest rates rose only modestly because the overall demand for credit has been, and continues to be, exceptionally weak.

Several conclusions seem to emerge from an examination of the Fed's recent actions. First, stabilizing the dollar is the Fed's most important short-term priority. A majority of the members of the Federal Open Market Committee, the Fed's key policy group, appears to be unconcerned with the rapidly spreading signs of economic weakness in the United States. Signs include a sharp upturn in initial claims for unemployment insurance, a significant drop in real retail sales and housing starts and a large rise in inventories of unsold goods.

Second, if the dollar does stabilize within a narrow trading range, the Fed is likely to restart its printing press well in advance of the November election. Mr. Greenspan is a skilled political operator in the tradition of his late mentor, former Fed Chairman Arthur F. Burns. Above all, he wants to avoid being forced to raise interest rates at the height of the Presidential campaign — as was Mr. Volcker in 1980.

Third, so long as the Federal Reserve continues to use short-term interest rates as a principal target in its day-to-day operations, monetary policy will continue to be unstable. Periods of exceptionally slow monetary growth (such as 1987) will alternate with periods of usually rapid expansion (1985 and 1986).

Over time, progressively larger swings in monetary growth — one of the hallmark's of the Volcker era — seem likely to contribute to parallel instability in real economic activity.

Mr. Greenspan's honeymoon with the business establishment may well have ended already. In an unusual action, the National Association of Manufacturers last month sent an open letter to the members of the Federal Open Market Committee "to urge the Federal Reserve to adopt an accommodative monetary policy in 1988. While we recognize that the dilemmas confronting the central bank at this juncture are

Bank Investments in Mortgage Securities Soar 126% in 1987

➸ Continued from Page 1

tional portfolio investments. Over the period, banks' municipal bond investments fell by more than 10%.

Third, mortgage securities were in abundant supply, offering attractive yields, little credit risk, and a relatively high degree of liquidity. Given these factors, the banks' demand for mortgage securities soared.

The *American Banker* found that over the 12-month period ended June 30, 1987, mortgage securities investments at federally insured commercial banks rose 126% to $68.6 billion, while these securities rose 30% to $180.1 billion at thrifts insured by the Federal Savings and Loan Insurance Corp. The overall supply of these securities was up 42% over the period to $616.3 billion.

These are some of the findings of the *American Banker*'s third annual survey of bank and thrift holdings of mortgage securities.

Mortgage securities are certificates of participation in pools of residential mortgages. Most are government mortgage securities — that is, mortgage securities insured or guaranteed by three federally sponsored agencies: the Government National Mortgage Association, the Federal National Mortgage Association, and the Federal Home Loan Mortgage Corp. Other mortgage securities called "private mortgage securities" are issued by depository institutions and insurance companies.

According to a banker at a large southeastern regional: "Last year, banks began to recognize more correctly the value of mortgage securities investments." In fact, among the top 100 banks in mortgage security investments at midyear 1987, 11 had no such holdings a year earlier.

The top 100 banks had $39.3 billion in mortgage security investments on June 30, 1987, up 118% from $18 billion held a year earlier.

Of the $39.3 billion of these securities held by the top 100 banks, $35.7 billion, or 90.8%, were government mortgage securities and $3.6 billion were private mortgage securities. A year earlier, government mortgage securities accounted for 92% of the top 100 banks' total investment in such securities.

Mortgage securities accounted for 3.7% of the top 100 banks' total assets but more than 28% of their entire investment in securities of all types. A year earlier, mortgage securities accounted for 2.2% of the top 100 banks' assets and 22% of their total securities portfolio.

The top 100 FSLIC-insured thrifts had $124.3 billion in mortgage security investments on June 30, 1987, up 27% from the $97.9 billion a year earlier. The top 100 thrifts accounted for 69% of the $180.1 billion in mortgage securities held by all FSLIC-insured thrifts at midyear 1987.

According to data from the Federal Home Loan Bank Board, the ratio of mortgage securities to total assets at all FSLIC-insured thrifts rose from 10.4% at the end of 1985 to 15% last June.

Analysts say thrifts have been increasing their holdings of mortgage securities largely as way to gain more flexibility in asset management and in borrowing. The securities can be sold off much more easily than whole mortgages and they can be used as collateral for a range of financings.

In addition, a growing number of thrifts have been purchasing large amounts of mortgage securities as part of "risk-controlled arbitrage" strategies. Here, a thrift typically purchases the securities with borrowed money and then vigorously hedges against interest rate changes. The supposed result is profits, no matter which way rates move.

Franklin Savings Association, Ottawa, Kan., a leading practitioner of such arbitrage, has grown rapidly almost entirely through mortgage securities. While pass-through securities accounted for about 63% of assets at midyear, derivative mortgage securities — such as collateralized mortgage obligations — brought the total of mortgage securities holdings closer to 90% of assets.

In pass-through holdings as a percentage of assets, Franklin trailed Guardian Savings and Loan Association, Houston, and Financial Federal Trust and Savings Bank, Olympia Fields, Ill.

Phil Roosevelt contributed to this article.

Compiled by American Banker Copyright 1988. Data are for FDIC-insured commercial banks. **Data source: ADP Data Services Division, New York,** from its data base of FDIC-insured commercial banks. ADP restates the 1986 data for 1987 mergers. **Total Mortgage Securities** are the book value of all of bank's holdings of U.S. government and private certificates of participation in pools of residential mortgages. Mortgage securities held in a bank's trading accounts are excluded. **Government Mortgage Securities** are the book value of all holdings of certificates of participation in pools of residential mortgages that are U.S. government-issued or -guaranteed. Included are certificates of participation in pools of residential mortgages issued or guaranteed by the Government National Mortgage Association (GNMA), the Federal National Mortgage Association (FNMA), and the Federal Home Loan Mortgage Corp. (FHLMC). **Private Mortgage Securities** are the book value of all holdings of certificates of participation in pools of residential mortgages that are issued by others (e.g. other depository institutions or insurance companies) that are not guaranteed by the U.S. government. **Govt. Mtge. Sec. as % of Total Mtge. Sec.** is the ratio of government mortgage securities to total mortgage securities. **Total assets** are total assets of the bank, including domestic and foreign offices. **Total Securities** are the book value of securities of all types held as assets by the bank. **Mtge Sec./Assets** is the ratio of total mortgage securities to total assets. **Mtge. Sec./Securities** is the ratio of total mortgage securities to total securities. **Securities/Assets** is the ratio of total securities to total assets. All ratios are expressed as a percent.

Top 100 Thrifts in Mortgage Security Holdings

Based on Mortgage-Backed Pass-Through Securities Held in Portfolios on June 30, 1987 (Dollar Amounts in Thousands)

CORPORATE FINANCE

Most chief financial officers and treasurers do not hedge with futures and options either because they do not know enough about them or because top management does not differentiate between hedging and speculating, according to a study by the Conference Board. 8

Randall Jenkins, who left his own small firm to start a private placement unit at First National Bank of Maryland, enjoys the best of both worlds. He has an incentive-based compensation package that is comparable to those on Wall Street and the security of a larger corporation. 8

Prudential-Bache Securities has raised $455 million for the Prudential Insurance Company of America in the first securitization of insurance policyholder loans. 9

Campeau Corp.'s hostile bid for Federated Department Stores is making life difficult for commercial banks that hope to sell pieces of a refinancing for Campeau's purchase of Allied Stores. 9

About three-fourths of last year's asset-backed offerings carried at least partial guarantees from third parties, with the Union Bank of Switzerland leading the field. A survey shows issuers purchased $1.6 billion in guarantees in 1987 from either banks or insurance companies to enhance the credit of 28 asset-backed issues worth $8.7 billion. 17

INSIDE

Fourth-quarter earnings at the 36 superregional bank holding companies declined by almost two-thirds from a year ago. The 23 superregionals in the Southeast and Midwest posted the strongest performances, despite an anemic earnings rise of 4% in both regions. 2

The Bank Board's oft delayed plan to salvage savings and loans in the Southwest is scheduled for release this week. The effort likely will involve merging several smaller, unprofitable institutions with bigger, better-managed ones. 3

International Thomson Organisation, parent of the *American Banker,* announced the acquisition of Securities Data Co. from Capital Cities/-ABC Inc. 6

Commercial Federal Corp., an Omaha-based thrift holding company that is aggressively expanding its interstate network, moved into Oklahoma by acquiring the deposits of the Territory Savings and Loan Association of Seminole from the FSLIC. 23

Quote/Unquote

'We developed this, but we may not end up being the biggest player if it does go to the public market, which is cheaper.'

David Donovan, of Chase Manhattan, on securitizing policy receivables. [Page 1]

COMMENT

To Mismatch or Not to Mismatch

By SANFORD ROSE

As noted previously in this column, a bank can be short-funded (liability sensitive) and still profit from rising rates, depending on the relationship between spot rates and the implied forward rates embedded in the yield curve.

Every yield curve contains an implicit forecast of rate changes. If the three-month rate is 5.50% and the six-month rate is 6.00%, then the marketplace is forecasting a three-month rate of 6.50% (more precisely 6.502%) three months hence. A bank that borrows at three months to lend for six months will make money from this mismatch as long as three-month rates don't rise by 100 basis points or more.

Otherwise put, the marketplace is paying the bank 5.50% for the first three months and 6.50% for the second three months. If rates fall or rise by less than 100 basis points, the bank in effect has a three-month asset yielding 6.50% in an environment in which the going rate is less than 6.50%. So the bank has a capital gain; it can sell its three-month asset at more than par.

Chase Helps Insurer Fund Growth By Securitizing Policy Receivables

By DAVID NEUSTADT

Corporate Window

NEW YORK — Chase Manhattan Bank's $175 million financing for Monarch Capital Corp. — the first securitization of receivables from single-premium variable life insurance policies — began as a discussion about real estate in May 1986.

"We wanted to see if we could help them finance their new headquarters building in Springfield [Mass.]" recalls David Donovan, a managing director in Chase's investment bank.

The Bank of New England got the real estate deal and became a major tenant in the building. But Chase did even better, Mr. Donovan says.

Chase got an assignment from Monarch that resulted in the innovative securitized issue that came to market in December. As a result, Chase has a much stronger relationship with the fast-growing insurance company.

Chase has moved into the leading position in a new market that could total $1 billion in financing. The bank also can point proudly to the creative aspects of the issue to show off its investment banking abilities.

This opportunity came to Chase because Mr. Donovan figured out on the spot a solution for Monarch's most serious problem: financing growth.

The plan was hatched when some of Monarch's top executives came to New York from Springfield to meet with se-

RAISING CAPITAL

Banks Issued $33 Billion in Securities in '87

By KENNETH J. HICKS

NEW YORK — U.S. banking companies issued $33 billion in debt, equity, and asset-backed securities in 1987, according to an *American Banker* survey.

The bulk of the issues were in the form of notes and debentures. Deposit notes, asset sales, and mortgage-backed securities also accounted for significant percentages of total bank issues.

More than half the offerings from thrift institutions came in the form of mortgage-backed securities, while equity offerings made up another significant block.

These are among the findings of the *American Banker's* first annual compilation of top financial services players in the debt/equity markets. Tables in this issue include a breakdown of debt is-

S&P Cuts Debt Ratings Of Five Major Banks

By JOHN P. FORDE

NEW YORK — Low equity capital, increased competition, and the nagging Third World debt problem prompted Standard & Poor's Corp. on Monday to downgrade its debt ratings on five large bank holding companies.

Affected were Chase Manhattan Corp., BankAmerica Corp., Chemical New York Corp., Manufacturers Hanover Corp., and First Chicago Corp.

"The debt load of Latin American

COMMENT

Continued from Page 1

Conversely, if rates rise by more than 100 basis points, the bank has a three-month 6.50% asset in an environment in which the going rate is above 6.50%. The bank has sustained a capital loss.

What are the chances that rates will rise by 100 basis points or more? Many banks believe that, except in extreme bear markets (rates rising strongly), the likelihood is that future spot rates will not increase as much as implied forward rates predict. The reason is the existence of a liquidity premium.

Short Is Best

The liquidity premium arises because, regardless of their interest rate outlook, investors prefer shorter-term to longer-term securities. So they bid up the prices of the short obligations and bid down the prices of the long ones. As a result, even if interest rates were expected to remain level, the yield curve would slope upward — long rates higher than short rates.

In other words, proponents of the liquidity premium argue that the shape of the yield curve is determined both by expectations and by the premium. If the market expects rates to rise, the yield curve will slope upward. But the six-month rate will not be just an average of today's three-month rate and the three-month rate expected three months hence. It will be higher than that average by the amount of the liquidity premium.

It follows that, if there is a liquidity premium, the implied forward rate will, on average, overstate the eventual rise in rates. That is, since the six-month rate is higher than it would be because of the premium, the current three-month implied forward must also be higher. And because implied forwards tend to exceed the market's best guess on likely future rates, bankers believe they can usually make money borrowing at a shorter maturity than that at which they lend.

The evidence suggests that the bankers are right. There is a liquidity premium in longer rates. Unfortunately, the value of this intelligence is limited because the data do not support the existence of a liquidity premium in other than the treasury market. Thus, in the great majority of markets in which banks typically operate, there appears to be no special incentive to borrow short and lend longer.

Hold vs. Roll

New evidence on liquidity premiums comes from Alden Toevs and David Mond, respectively principal and product manager at Morgan Stanley. Messrs. Toevs and Mond employed two complementary techniques to test for the existence of liquidity premiums.

They compared the return from holding a six-month security with that obtained from buying a one-month security and rolling it for a six-month horizon. If the return from the buy-and-hold strategy exceeds the return from the rolling strategy in a great variety of market conditions, then it can be presumed that there is some systematic bias in market pricing — i.e., a maturity or liquidity premium.

Second, the two researchers compared the return from a mismatch strategy of buying a six-month security and then selling it in three months in order to purchase another six-month obligation (analytically equivalent to lending for six months and borrowing for three months) with the return from a straightforward buy-and-hold-for-six-months approach. If there is a liquidity premium, the investor adopting the former strategy should realize higher, if more variable, average returns than he would by simply buying and holding for the full six months.

The Morgan Stanley researchers tested the liquidity-premium hypothesis in trials covering the period from January 1975 to July 1987. In each month from 1975 to the beginning of 1987, they bought a six-month treasury bill and compared the following six-month realized return with that obtained from rolling one-month bills to a six-month horizon. On average, the buy-and-hold strategy outperformed the one-month roll by 87 basis points.

The six-month strategy proved superior to the one-month roll in 124 out of 144 trials. Only during extreme bear markets — principally in 1980 and 1981 — did it pay to abandon the six-month approach and opt for the one-month roll.

Say Messrs. Toevs and Mond: "Although we might have expected the success of the six-month bill strategy in bull markets, its persistent success in all but the most bearish of markets provides strong evidence that the yield on six-month bills is boosted by liquidity premiums."

Next, Morgan Stanley compared the buy-six-sell-three strategy with the simple buy-and-hold approach for the same 1975-87 period. The average return from buy-and-sell exceeded that from merely holding by 31 basis points.

The more active portfolio method was successful in 103 out of 144 trials. This again supports the notion of a liquidity premium and the advantages of mismatching.

But what about the efficacy of mismatching in nontreasury markets? Morgan Stanley did the same analysis for the Eurodollar, commercial paper, and certificate of deposit markets. It found that, in contrast to T-bills, long maturities do not tend to beat a rolling strategy in periods of moderately to strongly rising interest rates.

Although in the case of bills, a six-month buy-and-hold strategy outperformed a one-month roll 77% of the time for most of the 1977-79 period, a comparable approach in the commercial paper market was successful only 15% of the time. The success rate in the Libor market during this period was 18%, while in CDs long maturities outstripped the roll only 35% of the time.

The fact that long maturities beat the roll in T-bills in all but the most bearish markets whereas the opposite is true for commercial paper, CDs, and Libor strongly suggests that there is no pricing bias — i.e., liquidity premium — in the latter group of markets.

A comparison of the return from a mismatching strategy — buy-six-sell-three — with that of maturity matching — buy six and hold — yielded the following results: On average, the returns from mismatching in commercial paper, Libor, and CDs were not measurably greater than those realized from a matched strategy.

Most significantly, however, the variance of these returns was unacceptably large. In commercial paper a mismatching strategy was successful in 71 trials, unsuccessful in 73 trials. In CDs, the mismatch paid off only 61 of 144 times.

A Failure to Flatten

Why does there appear to be a liquidity premium in bills while no such premium can be found in other money markets? The answer reflects the differential behavior of borrowers and lenders. If long rates are higher than short rates, private borrowers can be expected to minimize costs by shortening the maturity of their paper, thereby raising short rates relative to long ones.

Similarly, since there is apparently an excess demand for short bills and an excess supply of longer ones, the government can also minimize its borrowing costs by offsetting these conditions — that is, issuing more short bills.

Yet it does not do so. Either the government is insensitive to borrowing costs or else it feels that there is some compelling social objective to be achieved by adhering to its present policy of bill issuance.

Some analysts have suggested that shortening the maturity of bill offerings would unnecessarily complicate monetary policy by adding to the stock of money substitutes. So the government may have ample reason not to behave as a cost minimizer. In any event, there seems to be little pressure from the issuing side of the bill market to erase liquidity premiums and thereby flatten the yield curve, whereas there is considerable pressure to do so in private money markets.

Of course, even if private borrowers were not nimble enough to erase liquidity premiums, speculators would unquestionably do the job for them. Observing a liquidity premium in private securities, speculators would promptly employ a buy-six-sell-three strategy, thereby capitalizing the premium and tending to force securities prices into the equilibrium of a pure expectations framework.

Handicapped Speculators

Unfortunately, such an option is not available in the T-bill market. When investors borrow to finance a speculation in private securities, they need not pay a credit spread greater than received from owning the asset. But in borrowing to fund a T-bill speculation, the investor is disadvantaged. No one borrows at the treasury rate except the Treasury.

The investor must borrow at a somewhat higher rate than that earned from the bill. And the amount of this credit spread will tend to offset the profit from capitalizing the liquidity premium. So while speculators can arbitrage away liquidity premiums in private markets, they cannot do so as readily in bills.

As a result, bankers must live with the fact that the advantages of mismatching are restricted to instruments governed by treasury rates. The same advantages are not present in nontreasury markets, and they tend to be nullified in T-bills themselves by the credit-spread problem.

Tie Them to Treasuries!

The implications for asset-liability management are clear. The best chance of receiving liquidity-premium-enhanced returns is to link assets and liabilities directly to treasury rates. If a bank finances a six-month asset whose yield is tied to a comparable maturity treasury with a three-month liability similarly tied, it stands a fair chance of making extra profits.

Although it is taking some yield curve risk, the bank is in effect being paid by the marketplace to assume this risk. If rates rise sharply, the bank will lose money on the particular mismatch. But, on average, year-in and year-out, this type of a mismatch will pay off.

Stated in terms of the example used at the beginning of this article, a bank that borrows for three months at a treasury-determined rate of 5.50% in order to lend for six months at a treasury-determined rate of 6.00% is likely to profit most of the time. The reason: The bank's refinancing rate three months hence will probably be less than the 6.50% it is implicitly earning for the second three months.

Suppose, however, that the bank borrows at three months in the CD

Comment: Page 20

Banks Issued $33 Billion in Stocks and Bonds

➡ Continued from Page 1

sued in the U.S. by domestic bank holding companies, thrift institutions, and finance companies.

Also in this compilation is a listing of billion-dollar issuers of mortgage-backed securities.

In 1987, financial services companies — including bank holding companies, thrifts, finance companies, and insurance companies — brought a total of $177.7 billion to the credit markets. That accounted for 63% of the $281.9 billion issued by all U.S. companies last year.

More Debt/Equity Tables
Pages 12, 13

Banking companies and their subsidiaries, with $33 billion, accounted for 18.6% of the total financial issues. Of that amount, almost one-third were in the form of notes and debentures with maturities under 10 years. Another $4.3 billion was for notes due in over 10 years.

This particular debt/equity classification may increase further because of new capital guidelines being considered by the Federal Reserve Board. These guidelines essentially divide capital into two categories — common equity and all others.

Robert Baer Jr., a managing director of investment banking at Merrill Lynch Capital Markets, believes that the guidelines — if adopted — might prompt banking companies to issue more subordinated capital notes instead of convertible and preferred stock.

Debt/Equity Issuers

Leading financial services companies during January–December 1987 ($ millions)

	Yr-to-Date	In Dec.
First Boston	$11,401.4	$100.0
Salomon Brothers	11,151.8	328.5
Citicorp	7,393.4	89.0
Merrill Lynch	7,293.5	112.3
General Motors	4,176.9	0
M.D.C. Asset	4,072.0	0
Ford Motor Credit	4,002.7	200.0
Shearson Lehman	3,762.9	0
Goldman, Sachs	3,714.5	0
Morgan Stanley	3,604.6	0
Banks & subs.	47,209.5	3,677.8
Thrifts & subs.	19,335.7	1,276.7

Government agencies excluded. Figures include all subsidiaries.

Mr. Baer doesn't expect a sudden and major surge in such issues. "Banks would have a couple of years to phase in the guidelines" he said. However, he pointed out that subordinated capital is a cheaper means of increasing capital and he would expect those notes "to become increasingly attractive."

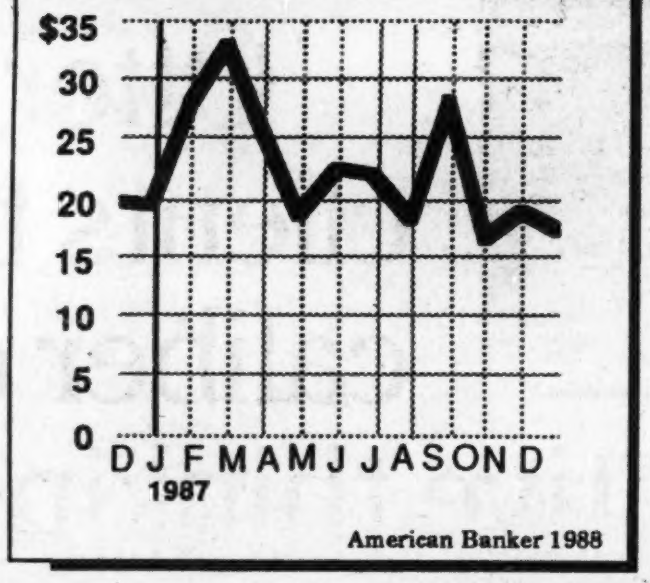
Another segment of bank issues was deposit notes. Initially, U.S. branches of foreign banks took advantage of these instruments because they didn't have to be reported to the Securities and Exchange Commission. Throughout 1987, "deposit notes became very popular," Mr. Baer said. Banks raised $4.2 billion in deposit notes last year, or 12.7% of their total.

A bank holding company could raise debt at the holding company level and downstream the funds to individual banks. However, this would appear on the holding company's books as debt and decreases its leverage. Since deposit notes are issued by the bank itself, the holding company's leverage is not affected. Further, rating agencies tend to look favorably upon such note issues.

Asset sales, primarily backed by credit card and automobile-loan receivables, accounted for another 10.5% of total banking company debt issuance. Mr. Baer expects banking companies to turn increasingly to asset sales, including the possibility of student and other consumer loan products, as a means of raising funds in the credit markets.

Debt/Equity Offerings

Issued by financial services firms, in billions of dolllars



American Banker 1988

Top Issuers Of Debt and Equity

Among banks and thrifts in 1987 (millions of dollars)

	Debt
Citicorp	$7,393.9
Manufacturers Hanover Corp.	2,530.5
Security Pacific Corp.	2,178.6
Chase Manhattan Corp.	1,925.0
Fincl Corp. of Santa Barbara	1,675.0

[1] Includes all subsidiaries.

However, Mr. Baer believes that those companies "with low loan growth and highly capitalized- . . . banks that are positioned for growth" may prefer to hold on to these assets. Such companies may even become buyers of other banks' assets.

Mortgage-backed securities made up another significant percentage of bank holding company issuance, as did equity offerings. Citicorp's $3.7 billion of mortgage securities accounted for 75% of the offerings in this category, and its $1.4 billion in equity accounted for 40%. In fact, Citicorp's $7.4 billion of funds raised in the various markets made up 22.4% of all banking issues in 1987.

Manufacturers Hanover Corp., parent of C.I.T. Group Holdings Inc., was a distant second in the markets with $2.5 billion, followed by Security Pacific Corp. at $2.2 billion.

Thrifts entered the quickly growing mortgage securities market heavily in 1987, issuing $7.6 billion, or 55.8% of the $13.7 billion of their total funding. Notes and debentures made up another $1.7 billion and equity issues, $1.4 billion. ■

Dear Reader, How Are We Doing?

The American Banker wants to make sure its statistical surveys of the financial services industry meet your information needs. So would you spend a moment to give us some feedback on the survey of 1987 debt and equity offerings that appears in today's edition? Please return this questionnaire to L. Michael Cacace, Statistical Chief, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-4836.

(1.) How would you **change** the survey to make it more useful? What would you add?

(2.) What do you like **best** about the survey?

(3.) What do you like **least** about the survey?

(4.) **How** do you use this information in your work?

(5.) What **new** statistical survey would you like to see?

Foreign Exchange Deals Rise at Largest Banks

➡ Continued from Page 6

over half the regional banks reduced their [foreign exchange] commitments in 1986."

However, calls to numerous regional banks failed to turn up one that had cut foreign exchange activity in the first nine months of 1987. Asked to explain this discrepancy, Mr. Chessen said: "Obviously, there were some that increased. With an average there are variations." Asked for the names of banks that had big reductions in foreign exchange transactions, he responded: "We are really hesitant to release bank-specific information."

Regionals reporting the same or higher volumes of foreign exchange include: NDB Bancorp, Detroit; National City Corp., Cleveland; PNC Financial Corp., Pittsburgh; and First Union Corp., Charlotte, N.C.

Frank Barkocy, a regional bank analyst for Merrill Lynch Capital Markets in New York, was not startled by Mr. Chessen's findings. "Regionals have been deemphasizing the whole international arena," he said. "There's less of a need to be involved in this type of business and more of a continued focus on the fundamental business in their region."

Foreign exchange is an investment-related off-balance-sheet activity, as are interest rate and currency swaps. Credit-related off-balance-sheet items include standby or commercial letters of credit and loan commitments.

Even with less participation by regionals, investment-related off-balance-sheet activity is booming.

Interest rate swap growth "continues to be stellar," Mr. Chessen found. The notional value of interest rate swaps written by U.S. banks increased $236 billion in the first three quarters of 1987, hitting $600 billion as of Sept. 30, 1987. That is up from $367 billion at yearend 1986. (The 1986 total was double the $186 billion racked up in 1985.) ■

Survey Shows Swiss Bank Leads In Support of Asset-Backed Paper

By ANDREW ALBERT

CORPORATE FINANCE

AN AMERICAN BANKER WEEKLY FEATURE

NEW YORK — About three quarters of last year's asset-backed offerings carried at least partial guarantees from third parties, with Union Bank of Switzerland leading the field.

According to an *Asset Sales Report* survey of credit enhancement in 1987, issuers purchased $1.6 billion in guarantees from either banks or insurance companies to enhance the credit of 28 asset-backed issues worth $8.7 billion. *Asset Sales Report*, published by the *American Banker*, is a weekly newsletter covering securitization.

Last year's offerings that did not include third-party support were generally guaranteed by the issuer — a practice typically followed by General Motors Acceptance Corp. and General Electric Credit Corp.

The third-party support allowed issuers to sell collateralized securities with triple-A or near-triple A ratings, a factor that is largely attributable to the growing popularity of the asset-backed market.

First-place UBS last year provided letters of credit for 11 asset-backed offerings worth $4.6 billion, far more than any other bank or insurer. Financial Security Assurance Inc. fully guaranteed five offerings worth $506.6 million to lock up the No. 2 spot in ranking.

The two triple-A rated companies — notably different in their history and approach — handled more than half of last year's 28 credit enhancement assignments in the asset-backed market.

UBS established its lead position in the industry by pioneering credit enhancement in the asset-backed market. In March 1985, the Swiss bank provided a letter of credit supporting 20% of the first issue of asset-backed paper — a $192.5 million issue backed by Sperry's computer lease receivables.

"We recognized the evolution of the market earlier than most other institutions and have been effective in executing our strategy to become a major factor in the enhancement of the securities," said Peter R. Haidorfer, a UBS vice president specializing in the asset-backed securities market. Prior to the birth of the asset-backed market, UBS had established itself as a guarantor in the commercial paper and industrial revenue bond markets.

UBS' letter of credit business is conducted out of the bank's four U.S. offices.

FSA, on the other hand, opened its doors in March 1984 and has quickly built a name for itself as a provider of 100% surety bonds for corporate debt. The FSA guarantee was employed last year in four auto-backed deals underwritten by Drexel Burnham Lambert Inc. and an issue of asset-backed preferred stock managed by First Boston Corp. — the first preferred issue of its kind.

FSA officials say they expect its deal volume to continue growing steadily in 1988, with a few transactions already in the works. Without the rich history of UBS, FSA has aggressively promoted itself to help win a market foothold.

Credit Suisse also made its mark last year by providing letters of credit in four deals, including a 6% letter of credit to support the year's largest asset-backed offering — a $1.4 billion issue collateralized by GMAC auto receivables. For a September issue of Union Carbide Corp.'s asset-backed preferred stock, the Swiss bank furnished a 100% letter of credit to provide funds for the purchase of trade receivables, if necessary. ■

Credit Enhancers Ranked

The table below lists those banks or insurers that provided guarantees for asset-backed securities that were publicly offered in 1987. The credit enhancement firms are ranked by the number of issues they guaranteed. (Millions of dollars.)

	Abbrev.	No. of Issues Guar.	Value of Issues with Guarantees	Amount Guar.
Union Bank of Switzerland	**UBS**	11	$4,640.3	$498.7
Financial Security Assurance	**FSA**	5	506.6	506.6
Credit Suisse	**CS**	4	2,440.7	400.9
Bayerische Vereinsbank	**BV**	2	402.0	38.2
Federal Home Loan Bank of S.F.	**FHLBSF**	2	210.0	37.0
Deutsche Bank	**Deut.**	1	150.0	27.0
Morgan Guaranty	**Morgan**	1	124.5	6.2
Other	**(1)**	2	183.5	41.0
TOTAL		**$28**	**$8,657.6**	**$1,555.6**

(1) Banks that provided only part of an issue's guarantee.

Listed below are the 1987 publicly-issued asset-backed securities that were guaranteed, either partially or fully, by third parties. The list includes the issue's principal amount, the amount guaranteed by a third party, and the firm that provided the guarantee. (Millions of dollars.)

Jersey Gives Approval To Constitution Bank

TRENTON, N.J. — New Jersey Banking Commissioner Mary Little Parell approved the charter application of Constitution Bank, which is in Cranbury, a fast-growing community in Middlesex County. This is the first bank charter to be approved in New Jersey this year.

The bank, to be capitalized at $5 million, would be the first home-based commercial bank in the Cranbury trade area, where the population rose 90% between 1970 and 1980, and household population was estimated to have grown an additional 40% between 1980 and 1985.

Charter approval is subject to raising the capital, receipt of FDIC insurance, and an agreement not to merge or consolidate with another banking institution for five years. ■

FDIC to Sell Continental's Leftover Assets

By LISABETH WEINER
Midwest Bureau

CHICAGO — The Federal Deposit Insurance Corp. will sell nearly all of the remaining $1.8 billion in assets it holds from the 1984 bailout of Continental Illinois Corp.

The three-member FDIC board voted Tuesday to separate the loans into six industry segments — energy, commercial, personal, international, maritime, and real estate — and sell each portfolio separately through sealed bids.

But the FDIC said it will accept one bid for all the loans if that offer exceeds the combined bids on the six individual portfolios.

The sale marks a radical departure from the way these troubled loans have been handled in the past. The FDIC asset administration department has been handling bad-loan collections through workouts. Under the bailout plan, $3.5 billion in bad loans was dumped on the regulatory agency.

While the FDIC has conducted bulk sales of loans it has acquired from failed banks, the Continental loans are unique in the size of the individual loans contained in the package and in the size of the proposed asset sale.

Appellate Court Casts Doubts On Status of Credit Card Banks

By ANDREA BENNETT
and RICHARD RINGER
Midwest Bureau

CHICAGO — A federal appeals court ruling has raised questions about the legality of special service banks, particularly the credit card banks established in South Dakota and Delaware.

The court decided that a state cannot enact interstate banking legislation that prevents out-of-state institutions from competing fully with banks based in the state.

The ruling last Thursday by the Eight Circuit Court of Appeals in St. Louis could force some states to amend their interstate banking laws to eliminate restrictions.

But the decision conflicts with an earlier ruling by the federal appeals court in Washington, D.C. Banking lawyers are predicting a showdown at the U.S. Supreme Court over the issue.

The St. Louis court overturned the Federal Reserve Board's approval of an application to open a credit card bank in Rapid City, S.D. The application was filed by the $8.4 billion-asset Michigan National Corp., of Farmington Hills, Mich.

The appeals court rejected the Fed's argument that a state has the authority to restrict the banking activities of an out-of-state bank when it allows such a bank to do business within its borders.

Marketer Who Came in from the Cold Wants To Heat Up Retailing at Chemical

By MAUREEN NEVIN DUFFY

CONSUMER FINANCIAL SERVICES
AN AMERICAN BANKER WEEKLY FEATURE

Consumers may not know the name Rupert A. Walters, but they are familiar with the icy relief of a Popsicle in mid-July. As president and chief executive of Popsicle Industries Inc., Mr. Walters got a grip on a Fudgesicles and Creamsicles business that was slipping against competition from specialty ice creams.

What should bankers care about Fudgesicles and Creamsicles? Chemical Bank officials thought enough of Mr. Walters' accomplishments to make him senior vice president of marketing and product management, a new post and the highest marketing position in the bank's history.

Hiring Mr. Walters is part of a one-year-old campaign to beef up Chemical's consumer sales force.

The marketing head, who joined the bank in October, reports directly to group executive Edward A. O'Neal Jr.

Since the reporting order puts Mr. Walters one person away from the vice chairman, industry insiders consider it an indication of Chemical's determination to excel in retail marketing.

It also is a sign that the bank plans to be among the first out of the gate marketing mutual funds, insurance, and other products when the deregulation flag finally goes up.

As one Chemical insider put it, "They figured it was easier to teach a consumer marketer the banking business than vice versa."

Many financial institutions are struggling over whether to hire people with financial backgrounds and teach them

Regulator Blasts Continental Aid To First Options

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Continental Illinois National Bank and Trust Company of Chicago officers clashed with their primary regulator Wednesday over the legality of a loan the bank made to an options clearing unit in the wake of the stock market crash.

Emory W. Rushton, deputy comptroller of the currency, told a House Energy and Commerce subcommittee that the bank had been warned by one of the agency's field examiners that it could not advance more than 15% of its capital to First Options of Chicago Inc. without collateral. An additional 10% of the bank's capital could have been extended with collateral.

Continental chairman Thomas C. Theobald said the wording of the bank's agreement on its lending limits with the clearing facility was ambiguous. "Continental Bank's total investment in, and loans to, First Options" could not exceed "in the aggregate an amount equal to the bank's legal lending limit at the time of the investment or loan of any funds," he said, quoting from the conditions established by the agency when it approved the First Options acquisition.

Since bank loans are limited to 15% of capital with no collateral and an additional 10% on a secured basis, "the statute to which the Comptroller's approval refers provides for an aggregate lending limit of 25% of Continental's capital and surplus," he said. "The approval is silent as to any allocation between secured and unsecured advances."

Holding Company's Role

On the same evening that Continental made the loan, Mr. Rushton said, the bank's lawyers contacted him and said the holding company, which was not bound by the Comptroller's conditions, would assume the loan.

The Energy and Commerce Committee has jurisdiction over the securities industry, and Wednesday's hearing made it apparent that the First Options episode will weigh heavily in the minds of committee members as they consider whether the Glass-Steagall Act should be repealed.

In particular, committee Chairman John D. Dingell, D-Mich, long-regarded as a staunch opponent of bank securities powers, argued at length that the incident raises serious questions about the ability of legislators and regulators to create adequate "firewalls" between banks and securities affiliates.

"Maybe it [the Comptroller's condition] was wrong, but it was a rule and rules should be honored," he said.

The system, he said, may be able to tolerate one bank violating rules. "But could we have tolerated it in the Depression, if 7,500 banks were" violating rules, he asked.

Mr. Dingell, the House's most powerful committee chairman, said the episode demonstrates the truth of former

Dutch Bank Wins Big in Debt Market

NMB Sold Mexican Paper Short, Then Bought It Back Low

By JAMES R. KRAUS and JED HOROWITZ

NEW YORK — A low-profile Dutch bank has been cashing in on the secondary market for Mexican loans by selling that paper short and then repurchasing it at lower prices, according to traders in the secondary loan market and at the bank.

Foreign-debt traders asserted that the $40 billion-asset NMB Bank of Amsterdam has been one of the few major buyers of Mexican debt during the past two to three weeks. NMB, they speculated, had earlier sold short a lot of Mexican paper in order to drive down the price, then locked in a profit by buying it back at the lower value.

Average secondary market prices for Mexican debt fell to a trading range of 47 cents to 49 cents on the dollar this week from 50 cents to 52 cents in the first week of January.

Peter R. Geraghty, vice president in charge of the bank's New York asset-trading operation, however, said that the bank began selling Mexican debt short last month after it concluded, for several reasons, that prices would fall.

Mr. Geraghty cited the suspension of Mexico's debt-for equity program last fall, a rising interest among many banks in selling off their Mexican paper, and uncertainty about the value of Mexican debt in light of the upcoming bond-for-debt swap that Mexico has proposed. Mexico is scheduled on Feb. 19 to auction off up to $10 billion of new bonds to creditors that tender at the highest discount.

Mr. Geraghty declined to specify the amount of loans traded by NMB or the profits that were realized. He also declined to comment on speculation by secondary market traders that NMB was the buyer of NCNB Corp.'s entire $105 million portfolio of Mexican loans in late January. The Charlotte, N.C.-based bank said it sold the debt to one buyer, but did not name the purchaser.

In a similar move, First Union Corp., NCNB's chief rival, last week also said it sold its entire $58.5 million Third World debt portfolio consisting of Mexican and Venezuelan loans. A bank official said "several investors" bought the loans, but would not comment on NMB's role. The two North Carolina banks said they sold the debt for an average of 50 cents on the dollar.

According to G.J. Tammes, vice chairman of NMB, the bank has been active in renting or buying Third World debt from U.S. regional banks to trade for its own account. Mr. Tammes said that the bank began expanding its purchases of debt from U.S. regional banks after European banks became less interested in selling off their paper.

"If you want to be a player in this market, you have to do it for your own account. You have to take in inventory," said Mr. Tammes.

Mr. Geraghty said he expected prices for Third World debt to remain within a narrow range for the next few months. The executive predicted that another major decline in Mexican loan prices would be unlikely because banks — which have been adding provisions to their loan-loss reserves — will be unwilling to cut into their equity by selling Third World debt.

Mr. Tammes said that transactions have until now been spurred mainly by debt conversion programs but that they will increasingly be prompted by developing nations buying back their debt under schemes similar to the bond-for-debt swap scheme developed by Morgan Guaranty Trust Co. of New York for Mexico. He also said he expected the International Monetary Fund and the World Bank to assist in facilitating the repurchase of debt by some countries.

His own bank, he said, has been linking a significant portion of its debt trading to corporate finance business in South America.

NMB — Holland's third largest commercial bank — is the only European commercial bank playing an important role in Third World asset trading and debt conversion, according to Mr. Tammes. He estimated that the bank accounted for $3 billion to $3.5 billion of $15 billion worth of debt traded last year. He cited Standard Chartered PLC as the next-biggest European player in this market, with around $760 million worth of trades through the first 10 months of last year.

The executive also predicted that loan sale volume will rise to $25 billion in 1988 as the number of "repurchase gimmicks," or "unofficial repurchase programs," used by the Philippines, Chile, Brazil, Argentina, and Mexico increases.

Mr. Tammes reported that of the $3.5 billion of Third World debt traded by NMB last year, around $1 billion worth was acquired by banks or corporations in Chile, Mexico, or Brazil. Between $1 billion and $2 billion of Brazilian debt acquired last year was purchased by multinational corporations and converted into local currency to build equity or was being used for other purposes. As much as $500 million worth of such transactions have been carried out during the last three months, he said.

A sizable part of the debt purchases are being done with flight capital held in accounts outside the debtor country, said the executive. He estimated that there is a demand for a further $2 billion worth of debt-for-equity conversions in Brazil. ■

Dutch Auction Fails for Arkansas Thrift's Preferred

By LINDA ELLIS

NEW YORK — For the first time, there has been a failed dutch auction in the preferred stock of a financing subsidiary of a thrift, an issue that has the highest possible credit ratings.

The 7.408% ceiling was not high enough to attract investors to the $75 million First Arkansas Funding Corp., a financing subsidiary of the insolvent First Federal Savings of Arkansas, Little Rock. Those who already owned the instruments were unable to sell.

Last August, an auction of the preferred stock of MCorp., Dallas, a commercial bank, failed twice. However, that preferred stock was backed by the parent's credit rating, which had fallen well below investment grade. In the case of First Arkansas, the financing subsidiary has a credit rating separate from the parent and the assets in the subsidiary are collateralized at 150%. The subsidiary carries an Aaa from Moody's Investors Service and AAA from Standard & Poor's Corp.

The underwriter is Prudential-Bache Securities Inc. According to a Prudential-Bache official, the investment bank is working with the issuer on options and strategy.

Auction-rate preferred issues are repriced every seven weeks using a blind auction device in which investors bid for the interest rate they want the shares to pay for the next seven weeks. A ceiling rate, or the maximum interest rate, is pegged for the First Arkansas issue, at 110%.

"It is unfortunate, but not really a surprise," said R. Edward Chambliss, a managing director of Salomon Brothers Inc. "The parent company has obviously had its problems. This is not a failure of the auction structure, not a failure of the subsidiary, and not a failure of asset quality or dividend [potential]. Most thrift issuers would not consider a dividend rate at 110% of commercial paper to be an economical execution and would find an incomplete auction a strong incentive to call the issue." ■

Source: Office of the Comptroller of the Currency, Dec. 31, 1987 figures

Requests for Capital Leniency Double

Washington Bureau

WASHINGTON — The number of federally chartered banks seeking regulatory leniency on capital requirements rose to 147 last year, more than double the 65 requests in 1986, the Office of the Comptroller of the Currency reported.

Of the 147 applications, the Comptroller's office approved 64 and denied 24. Nineteen were withdrawn, and 40 requests are still pending.

Federal forbearance programs were expanded last July beyond energy and farm banks to all banks with capital-to-asset ratios below the prescribed minimum of 6%.

However, banks in regions that rely heavily on energy and agriculture filed 82% of the applications. More than 62% of the requests came from national banks in the Southwest, while the Midwest accounted for another 20% of the applications.

Admission to forbearance programs formerly required banks to retain at least a 4% capital ratio to avoid being shut down. Last summer's relaxation abolished any capital minimum.

MARKETING MANAGEMENT

Banks Can Learn from Sears' Revolution

By N.W. 'RED' POPE

FOR A NUMBER OF YEARS, I have advanced a theory that banks should change their focus and operating methods if they really want to make it in the New World — the changing financial environment.

For lack of a better way of putting it, I have suggested the changes must come not from an evolutionary process, but from something of a revolutionary one. Certainly, I do not mean there should be some mutinous outbreak within the ranks or a violent takeover of some sort from outside.

What I mean, and what I believe, is that the time to turn banks around is here. Achieving that will necessitate actions many may perceive as revolutionary in nature.

I was heartened, therefore, to read a recent Associated Press story out of Chicago that dealt with Donald R. Katz's book, "The Big Store: Inside the Crisis and Revolution at Sears."

Mr. Katz reports that one Sears executive, during the troubled company restructuring in 1978, said: "Saving Sears is like turning the Queen Mary in the Chicago River." A formidable task indeed.

Edward R. Telling took over that year as chairman of Sears, Roebuck and Co. He faced declining profits, falling stock prices, and new, aggressive competition from discount chains. Mr. Katz states that a 50-year tradition of decentralization was threatening the nation's largest retailer from within.

As I read this fascinating review, I began to think of the increasing competition banks face, the falling stock prices, declining earnings. And, yes, the many traditions around which so many banks function — or languish as the case may be — including the centralization-versus-decentralization issue.

Pope Says:

It is no wonder Edward Telling stated a few years ago that Sears had traditionally been where America shops. Tomorrow, it will be where America banks.

According to Mr. Katz's 590-page account, Mr. Telling had to do nothing short of fomenting revolution. And he had to gather revolutionaries around him to do it.

Those revolutionaries, Mr. Katz said, "included the most gifted, opinionated, aggressive, driven, unusual, mysterious, and, in a few cases, plainly the craziest inhabitants of the corporate society."

Sears was described as a "sleepy, bucolic American company," in spite of its size and history. It was obvious to Mr. Katz that Mr. Telling's unique approach to changing the culture at Sears was the only way the giant retailer could be awakened and moved.

Mr. Telling's management style and philosophy worked, despite upheavals in the ranks. His reign ended in financial triumph one year ago, when he retired.

I love that story, perhaps because it reinforces my belief that many bankers will not be willing to come to grips with the changes that must be made until a revolution takes place. And few bankers view revolutionary actions as acceptable alternatives to methodical, historical, evolutionary moves.

Missing Only One Element

The easy part is that most banks already have everything it takes to change, except for that revolutionary attitude, the dynamic force that creates change. I suggest that most banks already have the capacity, the systems, the franchises, and the people to bring about revolution. What they need is a new focus, a new direction, a new commitment to take extraordinary actions to achieve extraordinary results.

Marketing people in banks, along with advertising managers and public relations directors, have been viewed as mavericks. Radicals. Unusual personalities. Opinionated and aggressive. Crazy.

Some would say they were revolutionaries of a sort, challenging tradition, questioning direction, making waves. Not content with the status quo in a time and place of change. Maybe somewhat like the people with whom Mr. Telling surrounded himself to bring about a new dimension for Sears.

The giant retailer had specialized in home and garden equipment, less-than-Brooks Brothers clothing, hardware, paint, and appliances. Who would have thought that Sears, in a revolutionary move, would start adding things like real estate, insurance, and securities to its line? And Cheryl Tiegs, Arnold Palmer, and Johnny Carson labels?

As we have all heard over and over for a few years, at Sears you can now get your houses where you get your blouses, your stocks where you get your socks, and — because of a hookup with H&R Block — your taxes done where you buy your axes. It is no wonder Mr. Telling stated a few years ago that Sears had traditionally been where America shops. Tomorrow, it will be where America banks.

Because he and his revolutionary associates began to view the future without myopic blinders, without fear of upsetting traditionalists or disturbing those who clung to yesterday's ways, without assuming everyone on board today was the right person to do the job for tomorrow.

Mr. Telling realized, as a handful of today's current crop of banker "crazies" have come to understand, that survival and success demand the unusual, the more risk-related, the fresh and exciting, the mind-stretching, the foresight, and, yes, the human resources that have the guts and the gall to go for it.

Part of Success Story

Those helping Mr. Telling carry out his dramatic schemes appeared to be driven by the need for corporate success, not simply by personal glory. True, managers like the sweet smell of success as well as the next person. But to some, including the maverick marketers, the real need is to be a part of producing success.

I have known hundreds of bank marketers. Those who are truly professional, who are dependable and innovative, seem to be totally unselfish, driven by an intense craving for corporate victory and not personal fame.

Many are ego-driven, yes — but most are loyal, committed, concerned, and eager for the bank to succeed, first and foremost. They know that if the bank wins, they win.

It is not turf protection for reasons involving internal politics that drives most marketers. It is the incredibly simple hope of becoming a winner.

At no time in half a century or more has the banking industry faced so much adversity, so many challenges, so much competition, and so many threats to its survival. These are not usual times.

We are no longer in a basic business. We are not likely to be able to wait it out until the "good old days" return. People and ideas that guided banks through the past may be hard pressed to assure their futures.

No one is more of an optimist in this business than I am. But I try to be a realist as well. And I believe the time is right for dramatic, new beginnings for those banks that want to make the moves that make a difference.

Mr. Telling was a revolutionist, widely criticized by his peers, the press, and the shareholders until the wheel of success began to turn in his favor. Then he was praised.

John Reed heard that negative hue and cry as he turned Citibank toward a consumer emphasis. Joe Pinola has heard it as he directs First Interstate to national franchising, truly a revolutionary move.

Ed Crutchfield at First Union in North Carolina heard it as he changed

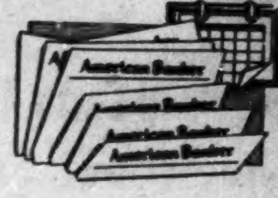
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- Gen. Robert E. Wood, chairman of Sears, Roebuck and Co., Chicago, and director of the First National Bank of Chicago, told a banking conference a cut in taxes and a reduction in the $11 billion defense budget — a record for any nation in time of peace — was not possible because of the threat from Russia.

20 Years Ago

- The House approved a tough "truth-in-lending" bill that required lenders to disclose to customers the annual rate of interest on revolving credit accounts.
- The trust division of the American Bankers Association said it would form a special committee to deal with the adverse publicity that resulted from a congressional probe of bank trust departments. Rep. Wright Patman, chairman of the House Banking Committee, charged that banks had conflicts of interest in their trust department activities.

10 Years Ago

- Federal Reserve Board Chairman Arthur F. Burns said he was prepared to recommend that Congress phase in NOW accounts for the financial industry on a nationwide basis, and that he wanted to couple the change with a proposal for interest on reserves left with Fed banks.
- In a sharp attack on the Securities Industry Association, Citibank chairman Walter W. Wriston said the Glass-Steagall Act was designed to protect bank depositors and to stimulate business, not to protect the securities industry from outside competition. Mr. Wriston defended bank activity in financial advisory services, including arranging private placements for clients, underwriting government revenue bonds, and stock brokerage.

5 Years Ago

- The Federal Savings and Loan Insurance Corp. was expected to be $898 million in the black in 1983, according to President Reagan's budget. It projected that difference between income and expenses to drop to $716 million in 1984.
- The Reagan administration announced plans to restrict the guaranteed student loan program by subjecting applicants to a "need analysis" to insure that the federal interest subsidies under the program "do not go to those who do not need them." The program at that time applied a needs test only to applications from students with family incomes of more than $30,000.
- Continental Illinois National Bank and Trust Company of Chicago said it would reduce its work force by 800 jobs in an effort to control noninterest expenses. The cutback, which represented about 6% of Continental's 13,000 employees, was to come through attrition and turnover.

1 Year Ago

- Antonio Gebauer, a former top officer at Morgan Guaranty Trust Co. who pleaded guilty to fraud, was sentenced to three and a half years in prison. Mr. Gebauer, who was in charge of the bank's Latin American operations, admitted defrauding Morgan of about $4.3 million by making unauthorized withdrawals of the accounts of wealthy Brazilian customers.
- The troubled BankAmerica Corp. said it had agreed to sell its discount brokerage subsidiary, Charles Schwab & Co., back to an investor group led by Charles Schwab, the firm's founder.
- Executives from three big New York banking firms appeared before the Federal Reserve Board to press their case for new securities underwriting powers. Representatives from Bankers Trust Corp., Citicorp, and J.P. Morgan & Co. said the Fed's stringent limit on how much commercial paper Bankers Trust could sell was too strict. The banks wanted the Fed to permit them to underwrite commercial paper, mortgage-backed securities, municipal revenue bonds, and consumer receivables through affiliates that also underwrite U.S. government securities.

White House Budget Would Cut Government's Role in Mortgages

By JIM McTAGUE and JAY ROSENSTEIN
Washington Bureau

WASHINGTON — A renewal of last year's unsuccessful assault on the growth of the federal government's giant mortgage agencies, and wide-ranging changes in federal credit programs for education and housing, are part of President Reagan's budget proposals announced Thursday.

The White House intends to continue its program of selling existing government loan assets without recourse, the budget documents state. Planned loan sales with a face value of $12 billion will affect such agencies as the Federal Housing Administration and the Small Business Administration in fiscal 1989. The budget estimates sales proceeds of $8.6 billion from these loans, or about 72 cents on the dollar.

The loan sale program, according to the budget proposals, is designed to reduce the government's cost of administering credit, to provide an incentive for agencies to improve loan origination and documentation, and to assist in measuring the federal subsidies inherent in federal credit programs.

Also in the budget report, the President urged the Federal Reserve Board to avoid tightening the nation's money supply.

"The outlook for inflation is quite favorable," the report said, noting that exchange rates and interest rates have been relatively stable this year. "Re-

Monarch Creates Subsidiary to Market Insurance, Services to Bank Customers

By LYNN BRENNER

NEW YORK — Monarch Capital Corp., a leading seller of life insurance through securities firms, on Thursday announced the creation of a subsidiary to market insurance and related services to banks' customers.

The new firm, Hudson Valley Financial Services, will be an independent unit offering the products of unaffiliated insurers in addition to its parent's policies, Monarch said.

Hudson Valley's first customer is Manufacturers Hanover Trust Co. The firm will sell insurance products to the bank's retail customers in New York, said Colleen Bugbee, a Hudson Valley spokeswoman.

Hudson Valley's initial marketing effort at the bank will focus on mail, telephone marketing, and seminars. They are recruiting a sales force.

"We may eventually have a physical presence in the bank," Ms. Bugbee said. "But the idea isn't to rely on walk-ins. We want our sales force making appointments with bank customers, in our offices and in the customers' homes."

This is Manufacturers Hanover's first serious attempt to make insurance available to customers, said the bank's senior vice president for retail marketing, Robert J. Hutchinson. The bank currently offers only credit-related coverages. Hudson Valley services will be marketed to the bank's branch customers, credit card customers, and to

MasterCard Signs Up Uncle Sam

Agencies to Use Card To Charge Purchases

By BILL McCONNELL
Washington Bureau

WASHINGTON — The bank card industry gained a major customer Thursday as the U.S. government unveiled a plan to use MasterCards for small purchases.

Employees of several federal agencies are being issued cards by Rocky Mountain BankCard System, a Denver-based card processing company. The program expands a test begun in late 1986, Department of Commerce officials said.

The plan could save the federal government $100 million during its first full year if adopted by all agencies, said Kay Bulow, assistant secretary at the Department of Commerce.

The Commerce Department is using 2,200 cards, and 13,000 cards are in use at other departments, including Agriculture, Defense, Health and Human Services, Housing and Urban Development, Interior, Labor, Transportation, and the Treasury. As many as 350,000 federal employees may be eligible to use the card, and all federal agencies are eligible, Ms. Bulow said.

The MasterCard program is the latest in a series of credit card efforts by the federal government in recent years. Employees of some government agencies have used Citicorp's Diners Club card since 1983 for travel and entertainment. In 1987, the government began accepting MasterCard and Visa payments for customs duties, bail bonds, postage stamps, and other products.

The government will pay a $5 annual fee for each MasterCard. Rocky Mountain BankCard and MasterCard will

COMMENT

The Major Banks Have Paid Too Little for Full FDIC Coverage

By IRVINE H. SPRAGUE

CONGRESSMAN Gerald D. Kleczka, D-Wis., on Thursday introduced legislation to have the Federal Deposit Insurance Corp. assess premiums on the foreign deposits held by U.S. banks. As a member of the House Banking Committee, Mr. Kleczka should get a hearing. At stake is about $300 million in assessments against a handful of megabanks.

The proposed legislation revives an issue that has been lurking in the background for years and addresses an effort I have carried out with notable lack of success since the failure of Continental Illinois National Bank and Trust Company of Chicago in 1984. Sen. William Proxmire, D-Wis., joined the effort at that time and had legislation drafted similar to Mr. Kleczka's bill.

The largest banks in the United States simply do not pay their fair share for the protection of FDIC insurance. Eight pay on less than half of their deposits. The other 14,000 banks across the nation pay on 100% of theirs.

The largest banks in the U.S. simply do not pay their fair share for the protection of FDIC insurance. Eight pay on less than half of their deposits. The other 14,000 banks across the nation pay on 100% of theirs.

— **Irvine H. Sprague**

To rub in the discrepancy, the biggies who pay on only a fraction of their deposits are all in the "TBTF" category: too big to fail. There is no way our government will allow any of the largest banks to go under. Not only are they exempt from much of the assessment costs, they are de facto guaranteed that all of the deposits are protected.

In 1984, I was cautioned by fellow FDIC board members not to rock the boat on the assessment issue: "Why do this?" I was asked. "Nothing is going to happen, and you are making the big banks mad at us."

In 1986, I outlined the unfair assessment system in my book, "Bailout," and since then I have pursued the subject in speeches to community bankers in Minnesota, California, Florida, Georgia, Iowa, and Illinois. In every instance, the response was strong support for change.

This support was evidenced in 1986 during the closing days of the 99th Congress when the Senate voted 63 to 32 to assess all deposits, foreign and domestic alike. The reform was misplaced in the budget bill and it disappeared in conference.

FDIC assessments can be used only by the FDIC and have nothing whatever to do with general government. However, the administration counts FDIC profit or loss in its consolidated budget account. Thus more FDIC profits do reduce the reported budget deficit. But the fact is, these dollars have absolutely no impact on government spending or the federal budget.

FDIC Chairman L. William Seidman has noted the phoniness of the budget issue. He said that assessing foreign deposits raises several complicated issues and that the appropriate forum to consider them is the House and Senate banking committees.

The hearings should be volatile. The community bankers are vocal about getting the short end of the stick. This is a guaranteed winning issue for any congressman in 1988. How often do you find an issue that is fair, right, long overdue, and also popular with your constituents? The congressmen need only balance the financial support from and the pressures by a dozen big-city institutions against the votes of their local constituents. The choice is easy.

The distinction between foreign and domestic deposits dates back to 1933 when the FDIC was created. The law states that assessments will be made on "domestic deposits." The reasons for this language are lost to history, but it certainly was not because of any dependency on foreign deposits in 1933.

Before Continental there was no real reason to question the lack of payment for the protection of foreign deposits. After all, we figured that it was theoretically possible for a big bank to fail and that the uninsured foreign deposits would be at risk. Four years earlier, we had bailed out First Pennsylvania, but foreign deposits were not a major factor.

Continental caused me to reconsider the assessment rules. The more the system is examined, the clearer it becomes that it is patently unfair.

The Continental bailout protected the entire $69 billion holding company structure: the book and off-book liabilities, the insured and uninsured depositors, foreign and domestic. At the time of the failure, there was just under $3 billion in insured domestic deposits, on which only $6.5 million in assessments had been paid.

The message was clear. Big banks with foreign deposits pay on only a fraction of their total deposits, yet all of the deposits are protected. The Continental cost appears to have leveled off at about $1.75 billion, and in the process all banks have lost the assessment rebate they had been receiving for more than 50 years.

The accompanying chart shows that eight institutions are paying on 50% or less of their deposits, while nearly all other banks in America pay on 100%. The table reports on the 10 institutions that had the most foreign deposits in 1987. A few other regionals had some

Citicorp, the unchallenged leader in American banking, with over $200 billion in holding company assets, paid $34 million to the FDIC in 1987, the assessment based on just 38% of its deposits. At the same time, BankAmerica, less than half as large as Citicorp, paid $42 million, the assessment based on 69% of its deposits.

Does anyone believe that either Citicorp or BankAmerica would be allowed to fail? The answer, of course, is no. So we have a situation in which two of America's megabanks, both receiving the same kind of protection, pay vastly different rates.

Since Mr. Kleczka's proposed change in law will affect only a handful of institutions, the lobbying is narrowly focused. The basic argument against the legislation is that the imposition of a one-twelfth of 1% charge on foreign deposits will make the megabanks noncompetitive in foreign markets.

Who Pays Least for FDIC Protection?

Ten institutions with most foreign deposits in 1987

	Assets 12/31/87 ($ Bil.)	Domestic Deposits 9/30/87 ($ Bil.)	Foreign Deposits 9/30/87 ($ Bil.)	FDIC 1987 Assessment ($ Mil.)	Percent of Deposits On which Assess. paid

Source: Federal Deposit Insurance Corp.

This kind of reasoning would be analogous to Lee Iacocca arguing that Chrysler should not have to pay taxes so it could better compete with Toyota.

The lobbyists are chasing their tails with this argument. Either the margin is so low that it is immaterial, or it is so high that it is intolerable for these banks to maintain such an advantage over their American rivals.

The Citicorp lobbyist, Bob Barnett, a former FDIC chairman and a savvy politician, came up with a new twist in talking to Congressman Kleczka. Changing the assessment would hurt foreign trade, he argued. Trade is a buzzword in this election year, so I guess Mr. Barnett decided to throw it into the pot, relevant or not.

The words used to describe the deals are different. But the total protection for all depositors exists whether the bank is given open-bank assistance, bailed out, sold, or handled in what is called a purchase and assumption transaction. The uninsured depositors are at risk only in a payoff, whether direct or through a deposit transfer, when the bank is closed and the insured depositors receive their money.

In fact, there has been only one closure and payoff of a bank over $200 million in the entire history of the FDIC: Penn Square. In addition, there have been five payoffs over $100 million and eight more over $50 million. Only in these cases was there any significant loss to depositors.

My original proposal was to assess all deposits and use the added income to reduce the basic rate for all banks. Mr. Kleczka follows this approach with a reduction of the rate from one-twelfth to one-fourteenth of 1%.

Today, with the FDIC operating with a record low surplus in 1987 of $50 million, it would be more prudent to use the added income to build up the FDIC fund. ■

Mr. Sprague served as chairman or director of the Federal Deposit Insurance Corp. for more than 11 years. During that time, he handled 374 bank failures, more than anyone else in FDIC history.

If you think these procedures are complex, wait until you start getting broker-dealer examinations.

Owen Carney, a director in the Office of the Comptroller, referring to existing investment portfolio procedures. [Page 1]

Fed Considers Following Lead Of Comptroller on Mutual Funds

By JED HOROWITZ

SAN DIEGO — The staff of the Federal Reserve Board is reviewing two decisions by the Office of the Comptroller of the Currency that strengthened banks' ability to market mutual funds, a Fed official said.

"We are looking at them," Robert S. Plotkin, assistant director of the Fed's division of banking supervision and regulation, told bankers attending a meeting here. "They are in direct opposition to the Fed's interpretation [of the Glass-Steagall Act]."

Last summer, the Comptroller's office told NCNB Corp., Charlotte, N.C., that its brokerage affiliate could offer customers advice on buying mutual funds and other securities that it sells as an agent. In December, the regulator broadened the interpretation by telling First Union National Bank, Charlotte, that it could offer advice on mutual funds for which the bank acted as investment adviser.

Owen Carney, director of the investment securities division of the Comptroller's office, said at the American Bankers Association's funds management and financial markets conference that he viewed the new activities "not as investment in the formal sense, but sales advice."

Mr. Plotkin made his comments from the audience after Dwight C. Moody, senior vice president of Florida National Bank and president of its Jacksonville-based brokerage subsidiary, urged bankers to promote mutual

Moratorium, Mutual Funds to Be Topics At Trust Bankers Annual Conference

By DAVID O. TYSON

NEW YORK — Leaders of the trillion-dollar trust banking industry are gathering in Washington this week to lobby Congress, hear what the regulators have in the works, and congratulate each other on surviving the Oct. 19 crash with minimum damage.

The national trust and financial services conference of the American Bankers Association began Sunday and continues into Wednesday with 900 trust bankers registered in advance.

Discretionary assets managed by their institutions surpassed $1 trillion for the first time in 1986, according to the federal regulators' tally for that year, which was completed only 10 days ago.

The report, now being printed, shows $1.065 trillion discretionary trust assets, with $450.9 billion in common and preferred stock, at the end of 1986. This was up from the $945.4 billion total, with $399.3 billion in stock, at the end of 1985.

The stock portion was 42% in both 1985 and 1986. The percentage in stocks may have fallen in 1987 because of the stock market crash. But assets managed by the trust industry probably expanded significantly beyond $1 trillion, thanks to the conservative balance of investments in most trust accounts.

David E. Ellison, president of Laird, Norton Trust Co., a privately owned institution in Seattle managing about $500 million, said stock market returns in recent

Citicorp Alters Layoff Policies To Trim Costs

Long-Term Employees Lose Some Job Security

By JOHN P. FORDE

NEW YORK — Citicorp, faced with drooping earnings, has changed longstanding personnel policies to reduce job security for some veteran employees and place a cap on severance payments.

The changes, intended to increase efficiency and bolster earnings, apply to all of Citibank's approximately 23,000 employees, as well as all the holding company personnel. Among the most important changes is the elimination of an exemption for 20-year employees from layoffs in all of Citibank's U.S. businesses. The move is expected to have the most impact on employees in the New York area.

Other changes include eliminating the concept of a "comparable" job for staff members whose positions have been eliminated. Instead, they will be offered a "suitable" position. The memo added that if the new position is in a lower salary or grade, the employee's salary can be gradually lowered if it is above the maximum for the new post.

Severance payments for staff members will be capped at 58 weeks, while officers can receive a maximum payment of 20 months' salary. Officers with less than 10 years of experience may receive a maximum of six months of salary in a lump-sum severance payment. For officers with more than 10 years of experience, the maximum severance payment is nine months' salary.

For employees with more than 20 years' experience, the policies were changed to allow more choices. The bank gives them more time to decide if

BANKING TRENDS

Service with a Smile Beats a Penny in the Pocket

By DR. PAUL S. NADLER

WHEN ASKED what one piece of advice he would give the American people, Conrad Hilton, the hotel mogul, is reported to have answered: "I would tell the American people, always put the shower curtain inside the tub."

Similarly, if I were given the opportunity to offer one piece of advice to the readers of this column, it would be Nadler's law No. 2: "You can't pay top dollar and give top service, too."

Nadler's law No. 1, "Show me a banker who makes fixed-rate loans and keeps them, and I'll show you a horse's rump," no longer needs attention. Most bankers accept this view.

The few savings and loan and bank executives who still gamble on rates by making these fixed-rate loans are risking the future of their institutions. They are like those Wall Street firms heavily involved in arbitrage — owning quantities of stocks of possible takeover candidates — that risked their viability when Black Monday came around.

Nadler Says:

Bank relationships are too important to be sacrificed and switched for a few basis points of lower borrowing cost or high return on certificates of deposit.

But Nadler's second law needs reaffirming over and over. It is the key to successful banking today, since service means far more than rate to the American borrower and to most depositors.

Bank relationships are too important to be sacrificed and switched for a few basis points of lower borrowing cost or high return on certificates of deposit.

What we want is good, dependable service. This applies not only to bankers as providers of service, it also applies to them as purchasers.

What customers want is to know they can call one person and only one person on any problem and that problem will be solved.

Visit a cash manager's meeting and see the state-of-the-art systems that are available. After a few minutes they all look alike and do the same things.

Talk privately to the vendors selling the work stations, float control programs, and the like. What each will tell privately (especially if you are a college teacher and don't intend to buy anything anyway) is that it is the personal touch, the willingness to call and call that makes the difference in who gets the order and the reorders. All the hardware, and most of the software, is similar.

Talk to bankers about their midmarket promotion programs for building loan volume. Again, they will tell you in private, "Everybody's money is green. We just visit more and try to understand what they want and provide it rapidly."

What does the public want?

No. 1, according to surveys commissioned by bankers of the industry in general and of their own banks, big corporate customers and individuals again and again say they want a bank that corrects errors.

Everyone makes mistakes. What customers want is to know they can call one person and only one person on any problem and that problem will be solved. This is what makes private banking so successful, and it has reached a point where banks like the Huntington National Bank, Cleveland, have assigned every single customer a private banker.

But it need not go that far. Liberty National Bank and Trust Company, Oklahoma City, has used a program of listing its phone numbers so specifically that customers whose names begin with the letters G through N, for example, know the specific number to call if they have an inquiry or problem.

What bank customers want is similar to the kind of service I received two decades ago. I had lightly bumped into another car. The other driver and I exchanged names and drove off, since there appeared to be no damage. The next week, when I received a lawyer's letter stating the other driver had experienced "whiplash," I called my insurance company. They said to send them the letter and they would handle it.

It is now 20 years later. I don't have the foggiest notion what happened, and I don't care. All I know is they said they would handle it, and they did. That's the kind of "one stop" or "one call" service we want from our banks, too.

Another service desire is speed. A quick no is appreciated far more than a slow yes. The potential borrower still has time to go elsewhere before the opportunity is lost.

Letting people know they are important is another area in which service is a key.

Jefferson National Bank, Miami Beach, will send the president's car to take a little old lady to the bank to do a transaction. Do you think she cares whether their certificate of deposit rate is as high as the next bank's as she steps out of the car and is told the driver will happily wait as long as it takes?

What it boils down to is, you can give rate or you can give service. You don't have to give both. And what more and more banks are finding out is that the public in many ways prefers getting good service over getting top dollar.

This comes as a slight irony to this writer: When deregulation first took place and rate competition soared, Nadler's law was intended to show that while you had to pay top rate, you didn't have to give all the service with it.

Now it appears to have turned around. Circumstances seem to indicate that the public wants the service but doesn't expect the rate to be the last dollar if the service is top quality.

With service so important, though, what else can we say about its delivery that could be useful?

A regional bank executive at an Illinois Banking Association conference gave some pointers on how to keep up service levels after taking over a smaller institution to avoid losing customers:

A quick no is appreciated far more than a slow yes.

- Notify customers of the change as close to the actual conclusion of the transaction as possible.
- Ask customers for their ideas on service deficiencies and listen to them.
- Communicate with the customers frequently.
- Stress quality in everything you do.
- Make sure bureaucracy does not slow transaction speed.
- Don't make promises you can't keep.
- Be honest.
- Don't destroy the identity of the acquired institution.
- Don't move people around more than you have to.
- Be clear on direction — don't give conflicting signals to the customers and the employees.
- Pray.

And — from the viewpoint of shareholders, I would add one final item — remember my law No. 2. You can give rate or service, but don't try to burn the candle at both ends. ■

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 8.

1. How many midwestern agricultural states were among the 10 states with the highest percentage of nonperforming loans in the first nine months of 1987?

2. "I can't think of another situation where the industry leader walked away. What can one say beyond that?" Securities Industry Association chairman John W. Bachmann was testifying before the House Banking subcommittee on financial institutions. To what incident was he referring?

Securities

3. A Senate subcommittee statement last year said that the so-called Nigerian Crime Network had "become especially adept at credit card fraud, bank fraud, insurance fraud, and entitlement fraud." How did a New York commercial bank use its computers to shrink losses caused by this countrywide network's schemes from about $550,000 a year to less than $20,000 a year?

4. "What we are doing, in theory, will reach into every corner of the bank," said Paul G. Bassett of Netron Inc. Name the foreign bank and the nature of the overhaul, budgeted at the equivalent of $85.4 million.

5. In the first of what the Federal Deposit Insurance Corp. hopes will be many bulk loan sales, 2,500 loans from 21 failed banks were sold to Diversified Financial Planners Inc., Fort Wayne, Ind. The defunct banks were located in what state?

6. Last year, David A. Coulter resigned as chief asset sales official at this California bank holding company. He went to the financial institutions group of E.F. Hutton Group in New York, serving as a first vice president. Now he has returned to the California company as senior vice president in its treasury and finance area. Name the West Coast concern.

7. Clouded hopes? "Our decision was to decline the invitation to talk about duality with Plus," said Bruce Burchfield, president of Cirrus System Inc. He was speaking of Cirrus' decision to reject a proposal by its rival, Plus System Inc., that the two automated teller machine networks offer reciprocal access to each other's customers. What was Mr. Burchfield alluding to when he used the term "duality"?

8. As part of a U.S. government plan, a Denver-based card processing company is issuing MasterCard cards to employees of several federal agencies to be used for small purchases. Name the Colorado company, which has already provided 15,200 of the cards to federal employees.

9. The 1987 pretax loss of $884 million is the largest ever for one of Great Britain's big four clearing banks. Name the bank that suffered the deficit after making provisions of $1.8 billion to its reserves for Third World loans.

Moratorium, Mutual Funds to Be Topics at Trust Bankers Meeting

➸ Continued from Page 1

years were more than should reasonably be expected. Accordingly, his portfolio managers had reallocated assets into bonds, cash equivalents, and real estate.

"When stocks went down, bonds did well," he said in a phone interview. "We had positive returns in most accounts. I don't know an upset customer I've got."

The absence of margin buying in trusts staved off much of the damage from the crash. "I was in a lawyer's office the other day, and he was telling me about a lady in a brokerage account," Mr. Ellison said. "She had $250,000, and she lost the whole thing. You don't find that in a trust department."

Even equity portfolios at many banks posted gains for the full year. The 321 common stock bank collective funds tracked by CDA Investment Technologies Inc., an *American Banker* affiliate, had an average total return of 4.3% for the year, despite a negative 21.2% total return in the fourth quarter.

In addition to the trust accounts at banks, investment advisers affiliated with banks managed $138.7 billion assets in 1985 and $159.9 billion in 1986, according to the regulators' survey. This group consists primarily of trust department investment managers who have been spun off into standalone companies in recent years.

A Band of Lobbyists

Many trust bankers attending the Washington conference are forming a band of amateur lobbyists. They will charge up Capitol Hill on Tuesday afternoon to urge their representatives and senators to enact the ABA legislative program.

They invade the halls of Congress at an opportune time: The Senate Finance Committee is expected soon to mark up the Proxmire-Garn bill, which would repeal key provisions of the Glass-Steagall Act. Indeed, a group of trust bankers from Wisconsin will meet with Sen. William Proxmire, D-Wis., chairman of that committee.

The most immediate item on the ABA agenda is what is known simply as the moratorium. Last August, Congress imposed a moratorium on regulators granting new powers to banks while financial reform legislation was considered.

The moratorium expires March 1. Congress is not likely to act in the meantime to extend it, but the trust bankers are not taking chances. They do not want it reimposed later, either.

Beyond that, the ABA seeks bank powers to underwrite mortgage and asset-backed securities, municipal revenue bonds, commercial paper, and corporate securities. As in past years, it also is pushing for a change of special interest to trust bankers — mutual fund powers for banks.

Courts and regulators have interpreted the Glass-Steagall Act as permitting banks either to act as investment advisers to investment companies or to distribute the fund shares, but not both. Trust bankers want the right to form their own mutual funds and sell them to their banks' customers and others, just as investment management firms and insurance companies do.

The moratorium notwithstanding, the Office of the Comptroller of the Currency issued a letter on Dec. 9 saying a national bank — First Union National Bank of North Carolina, Charlotte, in this case — can act as investment adviser to a mutual fund, recommend the fund to customers, and be its customers' broker for the fund.

The Comptroller's opinion falls short of saying banks can distribute funds. But it is one more milestone on the road to greater powers that the trust industry started on two decades ago.

"Rory O'Neil and I were the first cochairmen of the first ABA trust committee to start work on additional powers in that area in the mid-1960s," said W. Kenneth Bonds in a phone interview.

Mr. Bonds is vice chairman of Liberty National Bank & Trust Co. of Oklahoma City and was president of the ABA trust division in 1979. C. Roderick O'Neil, now a consultant, was head of the trust department of Manufacturers Hanover Trust Co. and later chairman of the investment committee of Travelers Corp.

"I believe all the forces that cause something like that to happen are finally coming together," Mr. Bonds said.

"I even think the opposition is intelligent enough to realize it's going to happen, and instead of fighting it they are finding ways to protect their nests as well as they can."

The opposition, not unexpectedly, is the mutual fund industry. And while bank efforts to gain added powers have stalled, mutual fund managers have preempted much of the bank market.

Bank trust accounts at the end of 1986, for example, had $35.2 billion invested in money market mutual funds. And the big managers of stock and bond funds, such as Fidelity, Federated, and Dreyfus, have struck deals with banks to market those mutual funds to bank customers.

"The very people who are trying to prevent banks from getting this authority are tripping over one another to get banks to sell their funds," said James D. McLaughlin, ABA senior government relations counsel.

"You will see them exhibiting at the trust conference, both to sweep cash into trust accounts and to make their funds available to bank customers."

The Tax Reform Problem

Trust bankers also will be talking to members of Congress about the 1986 and 1987 tax reform legislation.

Like individual taxpayers, administrators file returns for personal trusts and estates and pay tax. Changes in legislation make the task onerous. Tax staffs in trust departments must be reorganized and computer systems reprogrammed. Then, the Internal Revenue Service suddenly rewrites the regulations.

The IRS did that Feb. 2. It announced a change in how returns are filed for trust accounts that had fiscal years ending on dates other than Dec. 31.

At one time, all trusts ended on Dec. 31. But the returns bunched up, overwhelming trust departments and the IRS.

The IRS supported a provision in the 1954 tax act that let administrators define the fiscal year for each trust. But the agency came to perceive odd fiscal year ends as an opportunity to avoid paying some taxes.

Changing to calendar years in 1987 created a short interim year for many trust accounts that required a separate return. Many trust departments already had filed the returns for the short period when the IRS said the returns had to be annualized.

For example, a trust that had a fiscal year ended on Aug. 31 required a return for that 12-month period and for the four months ended Dec. 31. To annualize the four-month return, the trust multiplies trust income by three, calculates a tax for that prorated 12-months, and then divides the figure by three.

Another piece of tax legislation the ABA seeks is part of a technical corrections bill moving through Congress.

The 1986 tax act requires personal trusts for the first time to make quarterly tax installment payments, as do individual taxpayers. Each installment is based on income for the preceding three months. The April 15 payment, for example, is based on income for January, February, and March.

"That gives you 15 days to figure the payments and compute the tax," said Mr. McLaughlin. "If you are a big bank, you have to do that for several thousand accounts. Then you have to cut the checks and get them out."

Under a compromise the ABA worked out with the Treasury, the April 15 tax payment would be based only on January and February, not March. Instead of multiplying income for three months by four to estimate annual income, the bank would multiply income for two months by six.

"It gives us what we need but doesn't impair the government revenue," Mr. McLaughlin said.

Common Trust Funds

Aside from legislation, the ABA wants to ease some of the regulatory restrictions on common trust funds. These funds are the collective investment funds for personal trusts and estates, like mutual funds within a trust department. The Comptroller regulates such funds in both national and state banks.

ABA efforts are directed at the Comptroller's Regulation 9, which governs fiduciary activities.

One change sought is an easing in 10% limits. Under one limit, a common trust fund may not invest more than 10% of its assets in any one securities issuer. Under another, no trust account may hold more than 10% of a common trust fund.

The ABA also wants to permit banks to charge fees for managing specialized common trust funds, such as those in real estate and foreign securities, since they have higher operating costs. Banks now are compensated only by the trust fees charged to clients.

In another proposed change, the ABA wants to eliminate a requirement that a bank's board of directors must approve any amendment to a common trust fund. "That ought to be delegated to the trust department," Mr. McLaughlin said.

Comptroller Robert L. Clarke was scheduled to deliver the luncheon address at the Washington conference today. There is an outside chance that he will announce that the Regulation 9 changes have been sent to the Treasury Department and the Office of Management and Budget for approval.

Whether he does or not, the proposals are sure to come up when representatives from the federal agencies participate in rap sessions during the conference. Leading them off this afternoon is a familiar figure for some years at national trust conferences — Dean E. Miller, deputy comptroller of the currency for compliance.

Mr. Miller said he favors easing the 10% limits and the ban on management fees for common trust funds. And he is optimistic that the Office of the Comptroller will approve the revisions. ■

Trust Stake in Pension Market Firm

NEW YORK — In the face of competition from investment counseling firms, mutual fund managers, and life insurance companies, the trust banking industry appears to have held its share of the pension fund market in the 1980s.

According to an *American Banker* tally, the market share fluctuated between 27% and 30% from 1981 to 1986, the latest year of available statistics.

At the end of 1986, trust departments had discretionary investment authority over $450.7 billion in employee benefit fund assets in both trust and agency accounts.

That figure comes from the annual survey of the trust assets of financial institutions conducted by federal regulatory agencies. They include the Federal Reserve Board, the Federal Deposit Insurance Corp., the Office of the Comptroller of the Currency, and, since 1985, the Federal Home Loan Bank Board.

The $450.7 billion is 28.5% of the more than $1.581 trillion of pension fund assets at the end of 1986, as extracted from the flow-of-funds accounts of the Federal Reserve Board. The three components are private pension funds, state and local government employee retirement funds, and the insured pension reserves of life insurance companies.

Coverage of the two statistical series differs, so market share ratios should be treated with caution.

For example, a number of banks in recent years have spun off their trust investment divisions into separate subsidiaries of the bank or holding company. The regulators' survey started covering such affiliates separately in 1985. But their assets are not included in the trust banking totals.

The trust totals do include individual retirement account and Keogh plans set up as trusts. IRAs and Keoghs are not reflected in the flow-of-funds totals.

Proxmire Bill Still Changing

Curbs on Securities Firms Eased in New Proposal

By ROBERT M. GARSSON

WITH the Senate Banking Committee moving ever closer to a vote on major banking legislation, aides to Sen. William Proxmire last week are scrambling to salvage the Wisconsin Democrat's effort to repeal the Glass-Steagall Act.

Late in the week, staff director Kenneth A. McLean, according to several sources, was claiming that he had lined up a majority behind a compromise bill. The essence of the compromise was said to be a relaxation of restrictions that would have prevented most major securities firms from purchasing a bank and a phase-in of the Glass-Steagall repeal.

However, a number of sources said that Sen. Christopher Dodd, D-Conn., and Sen. Alan Cranston, D-Calif., two key players in this legislative battle, are unwilling to accept Sen. Proxmire's compromise.

Senate Banking Committee staff earlier in the week began circulating a new draft of the banking bill that was intended to serve as the basis for committee deliberations when it meets to vote on legislation. The crux of the draft was language repealing key sections of Glass-Steagall.

But the proposal apparently did not relax restrictions that would prevent most large securities firms from purchasing a bank. It had been widely rumored that such a change would be in the print to satisfy critics who argue that the Proxmire bill is a one-way street that gives banks access to securities powers but bars the securities industry from banking.

Because the earlier draft does not revise the Bank Holding Company Act, securities firms involved in insurance or commerce would not be able to own a bank. As a practical matter, all but one or two of the 30 top securities firms would thus be barred from banking. The print apparently

Union Goes from British to Japanese

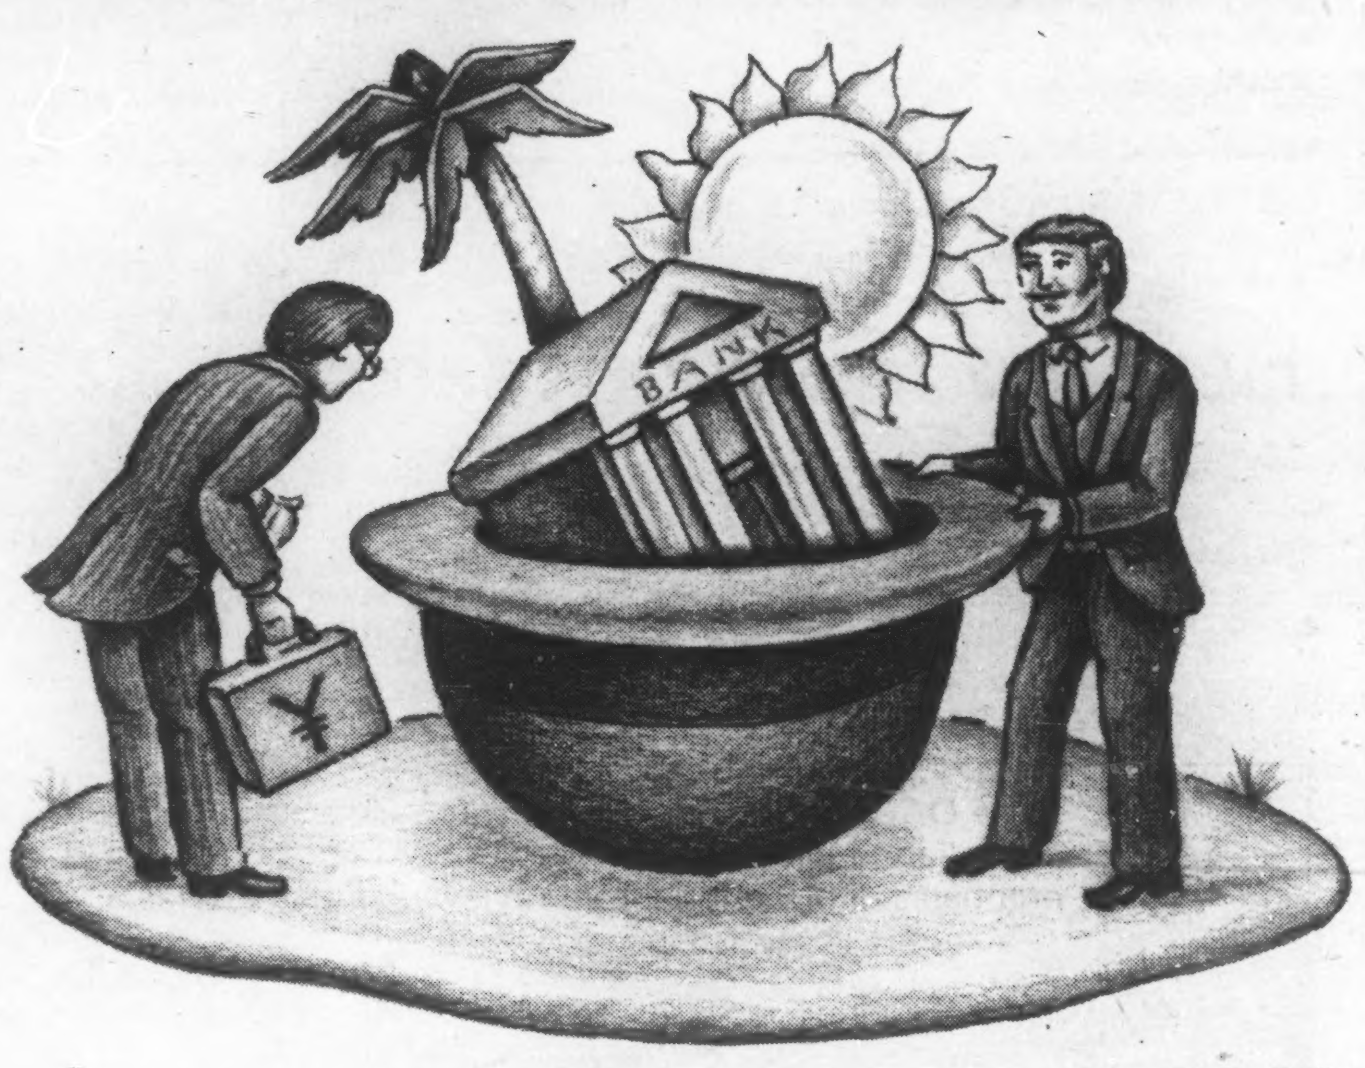
WHEN the agreement to sell Union Bank to California First Bank is completed, it will simultaneously boost the presence of Japanese banks in California and complete the withdrawal of British banks from the state.

Standard Chartered PLC, the London-based bank, last Tuesday signed a letter of intent to sell its Union Bank subsidiary to California First Bank for $750 million. California First, San Francisco, is 77% owned by the Bank of Tokyo Ltd. and is the sixth largest bank in California. Union Bank, Los Angeles, is the state's fifth largest.

The sale, which has been expected for some time, finishes the British exodus from the Golden State. Earlier this year, Barclays Bank PLC agreed to sell its California retail banking subsidiary to Wells Fargo Bank. In 1986, Wells completed its $1 billion acquisition of Crocker National Corp. from Midland Bank PLC. And in 1985, Lloyds Bank PLC sold its California operations to the Sanwa Bank Ltd.

For nearly two years, senior executives at California First Bank have been shopping for an acquisition that would add muscle to the state's largest Japanese-owned bank. The proposed purchase of Union Bank will bolster California First's position as a middle-market business lender.

The deal also is part of a larger strategy by Bank of Tokyo to take advantage of growing trade along the Pacific Rim, according to Seishichi Itoh, president and chief executive officer of California First. "California will be a very important location for Japanese companies," Mr. Itoh said.



Charles Waller

For Standard Chartered, the sale is part of a major effort to rebuild its severely battered capital position. In August, the bank announced a $395 million loss for the first half of 1987 after boosting reserves by

Comptroller Says Disclosure Rule Will Promote Confidence

By ROBERT TRIGAUX

THE regulator of the nation's federally chartered banks says that those institutions must start providing regularly updated and detailed information of their financial condition to anyone who requests it.

The new rule, issued by the Office of the Comptroller of the Currency, requires national banks to provide an annual disclosure statement to customers, shareholders, "and other interested persons" no later than March 31 every year. The first disclosure information will cover financial data from 1987.

The rule is identical to one issued late last year by the Federal Deposit Insurance Corp. affecting federally insured state, nonmember banks. The Federal Reserve Board is not expected to require similar disclosure by its state member banks.

The Comptroller's rule is the product of a belabored rule-making process that began in July 1984, when then Comptroller of the Currency C. Todd Conover proposed stringent rules requiring national banks to supply more information, including enforcement actions taken by the agency against a bank.

Since then, three different disclosure proposals have been put forward, 898 comment letters have been received from the industry, two public hearings have been held with 25 witnesses, and the final agency proposal has made its way through lengthy internal reviews of the Treasury Department and the Office of Management and Budget. Now, more than 1,300 days later, provisions have been relaxed in the final rule. The proposed disclosure of enforcement actions has been dropped.

This rule calls for national banks to disclose the same data they

Layoffs Cutting a Swath Through Nonbank Firms

BANKS and brokerage houses are not the only segments of the financial services industry that using cutbacks in efforts to reduce the costs of doing business. Last week, both a big mortgage banker and a major mutual fund group announced new rounds of staff layoffs.

Citing continued declines in mortgage originations nationwide, Lomas & Nettleton Financial Corp. said it plans to reduce its mortgage banking staff by an additional 20%, laying off about 540 people. The Dallas-based financial services concern said the cutbacks, along with additional restructurings in the mortgage unit and an increase in reserves against foreclosures, will produce a $93 million charge to net income for the quarter that ends March 31.

The cutbacks, expected to take place in the next few weeks, follow a similar staff reduction in October. They will leave a mortgage banking staff of 2,150 employees, down from a 1987 peak of 3,600, the company said.

Retrenchments have swept the mortgage industry since last April, when rising interest rates began to cool consumer demand. But industry observers said that Lomas' staff reduction, 40% since October, is unusually large.

"Cutbacks of 20% to 25% have been more norm," said Robert Keating, director of the mortgage banking group at Salomon Brothers Inc. He added, however, that many companies may make additional cuts if the current flurry of mortgage lending, caused by a sudden drop in interest rates, proves short-lived.

Jess Hay, chairman and chief executive of Lomas & Nettleton, said in an interview that the firm's mortgage unit is not suffering from unique problems. Instead, he said, the scale of the cutbacks reflects the industry-wide drop in originations from last year's levels and Lomas' projection of "gently declining demand" over the next 20 years.

"We accept as a reality the probability that fewer families will be formed in the next 20 years than in the past 20 years," reducing the demand for housing, he said.

The Mortgage Bankers Association of America projects that total residential mortgage originations will drop to about $330 billion this year from an estimated $425 billion in 1987.

Mr. Hay said virtually all of the staff reductions at Lomas will be layoffs and that they mainly affect production personnel.

Lomas & Nettleton plans to cut its branch network from 60 offices nationwide to about 30 branches. These branches will serve larger geographic areas than the current offices, Mr. Hay explained. The company said it also will discontinue its depressed home building operations in Texas. In addition, the company plans to consolidate loan processing in Dallas.

Earlier, the Boston-based Fidelity Group of Mutual Funds laid off 326 workers, most of whom were temporary employees, because of a downturn in the mutual fund business, company officials said.

The bulk of employees laid off — 300 from offices in Boston, Dallas, and Salt Lake City — were temporary telephone sales employees hired to handle the expected increase in individual retirement account sales during the first four months of the year. The other 26 employees worked in the firm's discount brokerage unit in New York.

➸ Continued from Page 11

$700 million for its troubled Third World debts. The bank then announced its intention to dispose of more than $500 million in assets to increase its reserves even more.

In January, Standard Chartered announced its first major asset disposal, agreeing to sell its United Bank of Arizona to Citicorp for roughly $210 million. The British bank said the sale of both banks and several minor subsidiaries should bring it about $1 billion.

"The sale of Union Bank is in keeping with Standard Chartered's declared intention of strengthening the group's capital position through the sale of selected assets," the bank said in a statement last Tuesday. It said the proceeds of the sale plus the reduction in assets on its balance sheet should result in a "significant improvement" in its capital ratios.

Banking analysts said, however, that even though Standard Chartered has raised twice the amount that it sought, its capital ratios still will be considerably below the capital positions of the other major British banks.

Japanese Holdings in State-Chartered California Banks

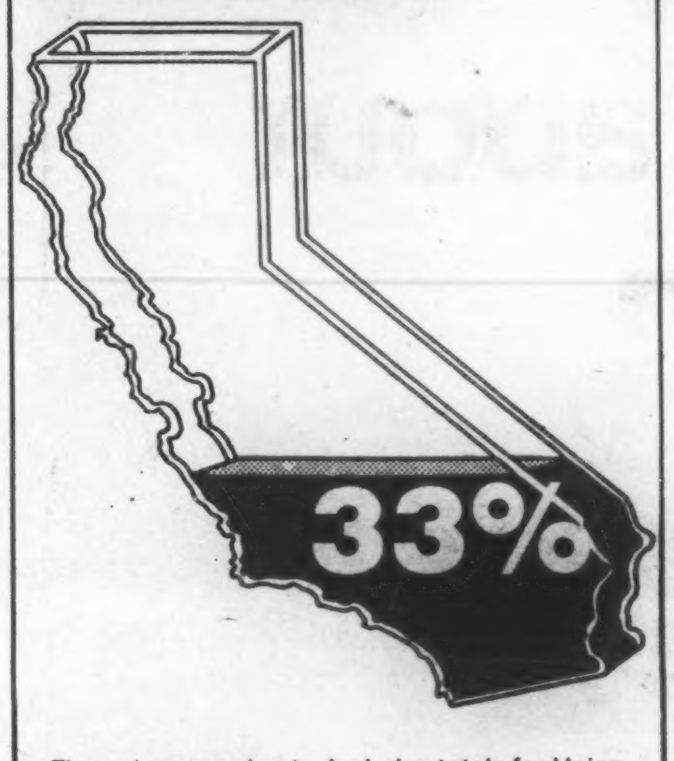

Figure is approximate. Includes totals for Union Bank, assuming acquisition is completed.

Standard Chartered's equity-to-assets ratio following both sales will be only 3.7%. That compares with 4.6% for Barclays Bank, 4.4% for Lloyds Bank, 5.7% for Midland Bank PLC, and 5.6% for National Westminster Bank PLC — the big four British banks.

ANALYSTS said Standard Chartered now faces a dilemma because further asset sales must come from its integrated international network as it lacks other "stand-alone" operations such as Union Bank and United Bank. Standard Chartered's two founding banks, the Chartered Bank and the Standard Bank, were set up in the 19th century to serve British trading interests in Asia, Africa, and the Middle East. It now has offices in more than 60 countries.

Its U.S. investments, beginning with the 1979 acquisition of Union Bank, were part of a 10-point program to develop substantial assets in industrial countries to balance the large amount of assets in developing African and Asian countries.

Analysts said its U.S. investments were relatively successful, although its attempts to sell both Union and United were hindered by the stock market crash.

The $750 million price for Union represented a $373 million premium over what Standard Chartered paid for the bank in 1979. Its sale of United for roughly $210 million, however, is $125 million less than it spent to acquire the bank only a year earlier.

Union Bank earned $56.3 million in 1987, roughly unchanged from a year earlier. Standard Chartered said that the $750 million price tag for the bank represents 13.3 times Union's net income after taxes for 1986 and 1987.

Union Bank focuses on lending to midsize companies and financing construction projects. The proposed acquisition is part of the California First's goal of 200 branches by 1990. Assuming shareholders and regulators approve the purchase, California First would have 167 branches in the state and $15 billion in assets, an estimated 150% increase from yearend 1987 assets of about $6 billion.

More important, Union Bank adds a substantial presence in the populous and economically strong region of Southern California. It also catapults California First into middle-market and real estate lending, two areas where the company has attempted to expand but has met with lackluster results. California First has traditionally focused on retail and international banking.

"We have tried hard to get middle-market customers and to get into real estate lending," Mr. Itoh, California First's chief executive, said in a telephone interview. "We have been successful to a certain degree, but not as much as we would have liked. We are a balanced bank. This is a good combination."

California First Bank is 77% owned by the Bank of Tokyo, Japan's 15th largest bank and one that specializes in international lending. The remainder of California First's stock is publicly traded in the over-the-counter market.

The sixth largest bank in the state, California First operates 135 branches in California and has 3,900 employees. Last year, the company earned $40 million, a 29% increase from 1986 earnings of $31 million.

Mr. Itoh said his company intends to raise two-thirds of the $750 million for Union by issuing common stock in the U.S. and the remainder through capital notes.

"We consider ourselves an American company," he said. "We would like to increase the number of local shareholders. But if we cannot sell all of the stock here, we will sell the rest to the Bank of Tokyo."

Union, the fifth largest bank in California with assets of $9.1 billion, has 32 branches and 4,400 employees. It was acquired by London-based Standard Chartered PLC in 1979 for $376.5 million. Standard Chartered has been attempting to sell the subsidiary for several months.

Like many other banks, Union recently suffered from domestic credit quality problems. But it has remained profitable. For example, net credit losses totaled $82 million in 1987, compared with $33 million a year earlier. Nonperforming assets rose to 4.3% of total loans and leases, against 3.2% in 1986.

Despite a doubling of its loan-loss provision in 1987, the bank's profits in 1987 were virtually unchanged from about $56 million a year earlier.

Although the Union acquisition would leave California First 33 branches short of its strategic goal for 1990, Mr. Itoh said he has no plans at present to find another merger. Instead, he said, California First officials will concentrate on consolidating the two companies and on internal growth. ■

New Rule Requires Wider Disclosure

➸ Continued from Page 11

already provide bank regulators in their call reports, formally known as reports of condition.

Call report information is already available to the public upon written request to the FDIC. The Comptroller's ruling simply makes the information more readily accessible.

A national bank has the option in disclosing its financial condition to provide a written discussion of the financial data by bank management. A spokesman for the Comptroller said that the agency is encouraging banks to include this narrative section to help customers better understand the financial information provided.

National banks must post notice in their lobbies that information on the bank is available, and must provide the material free of charge and in a timely manner, according to the ruling. A disclaimer that the Comptroller has not verified the presented information must be included.

National banks must post notice in their lobbies that information on the bank is available.

Extra disclosure, said the Comptroller, should "promote greater public confidence in national banks and the national banking system" and improve financial investment decisions by the public.

Consumer lobbyist Michelle Meier, counsel for government affairs for Consumers Union, said that she had not examined the final disclosure rules but that she was "glad the agencies were doing something." Consumers Union had in earlier comments on the disclosure rule called for the Comptroller to require banks to provide information on insider and affiliate transactions, as well as on noncompliance of consumer protection laws.

DISCLOSURE

Disclosure of this type of information is not required by the banking agencies.

Ms. Meier said her organization had sued the Comptroller about a year and a half ago to try to force the agency to provide access to consumer complaint information. Recently, a request was filed for oral arguments in the case in the federal district court here. ■

Proxmire Offers Compromise Bill

➸ Continued from Page 11

addressed technical issues and left policy decisions for another day.

The proposed legislation seemed to be in the throes of constant revision last week, and there is little doubt that the situation will continue to be very fluid.

"The Proxmire bill is a theoretical two-way street, but not a practical one," said one Senate staffer. "Our job is to make this a more legitimate two-way street." A vote on the measure is now not expected until sometime next month.

Elsewhere on the new powers front last week, the National Association of Realtors reversed a long-standing position and said banks should be permitted to exercise a broad range of real estate powers through separately capitalized affiliates.

The Realtors' new position could eliminate one of the most difficult obstacles to new bank powers, provided the trade group does not demand safeguards that would make it impossible for banks to operate the new units profitably.

"Historically, we've taken on three industries at once," said Edward L. Yingling, chief lobbyist for the American Bankers Association, referring to the securities, real estate, and insurance lobbies. "Now the securities industry is fragmented and the real estate industry has shifted its position."

The National Association of Realtors, the major trade group for the nation's real estate brokerage industry, represents over 800,000 Realtors nationwide.

Mr. Yingling said he was encouraged by the Realtors' policy, but added that the ABA has not had time yet to evaluate the restrictions on new affiliates that the Realtors will seek in return for their support. As a result, he said, the bank group is not ready to say whether it can endorse the Realtor's policy.

In testimony Wednesday before a Republican congressional task force, a lobbyist for the National Association of Realtors said the trade group's new position was adopted at a meeting in San Antonio last week.

Gil Thurm, vice president and legislative counsel for the Realtors, said the trade group plans to translate its new policy into legislative language in the next few weeks. ■

FDIC to Revise Rules for Hearings

THE Federal Deposit Insurance Corp. has agreed to publish for public comment a thorough revision of its rules for administrative hearings on possible violations by banks and bankers.

Comptroller of the Currency Robert L. Clarke said his agency is reviewing its own procedures and could issue a similar proposal "sometime in the fairly near future."

The aim of the proposal is to streamline the agency's rules for holding hearings and taking administrative actions such as removing an officer from a bank.

Among the key changes being considered is one to mandate that most hearings take place within 90 to 120 days after allegations of wrongdoing are made by the agency.

Under current rules, hearings are held within 30 to 60 days. But that timetable often is not met, John Thomas, senior attorney with the FDIC, told the agency's board.

The proposed rules were expected to run more than 100 pages. They will be out for comment for 60 days after publication in the *Federal Register*.

Other aspects of the proposal, according to agency staff, would authorize sanctions if a bank or banker failed to follow an administrative law judge's rulings. Other provisions would answer procedural questions about matters such as briefs and witnesses in connection with hearings.

An American Banker Special Report

Foreign Banks in US Boost Loan Purchases

By L. MICHAEL CACACE

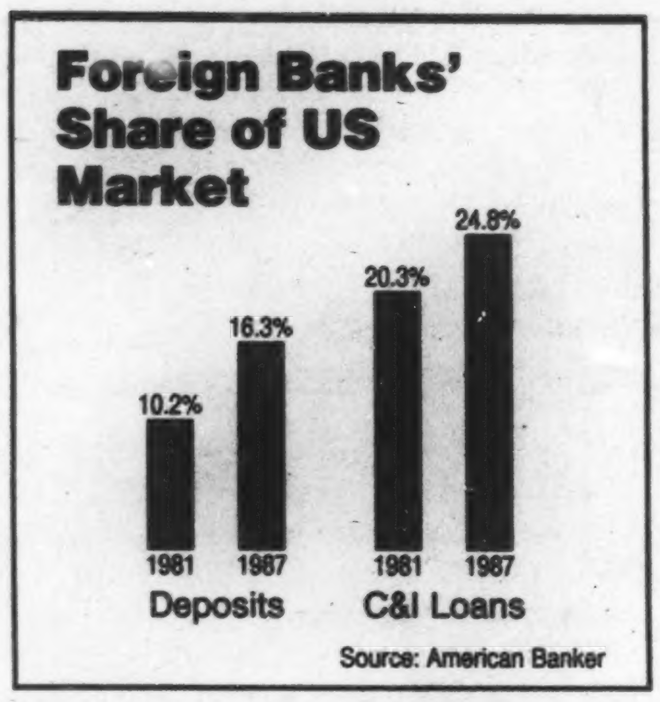
NEW YORK — Business loans grew almost five times faster at the U.S. offices of foreign banks than at American-owned banks last year.

Japanese banks led the surge, accounting for more than 77% of the growth in business lending posted by all foreign banks in the United States.

The main reason for the sharply different growth rates is that the large U.S.-owned banks have been selling off substantial portions of their business loan portfolios. And the U.S. offices of foreign banks — especially the large Japanese institutions — have been the chief buyers of those loans. As a result, loans that were originated by U.S.-owned banks are ending up on the books of the U.S. offices of foreign banks.

These are some of the findings of the *American Banker*'s annual study of the U.S. banking operations of foreign banks. The *American Banker* looks at the commercial and industrial loans, deposits, and total assets booked by foreign banks through their U.S. offices through the year ended June 30, 1987.

Foreign Banks' Share of US Market



Source: American Banker

The statistical findings are presented in a special insert to this edition (pages 1A through 23A).

The sharp gain in business loans posted by foreign banks in the United States last year means that about $1 of every $4 lent to businesses by all banks operating in the U.S. is held on the books of the U.S. offices of foreign banks. In 1981, that figure was $1 out of every $5.

The U.S. banking offices of foreign banks include branches, agencies, commercial bank subsidiaries, Edge Act banks, and New York State investment companies.

At midyear 1987, business lending by the U.S. offices of foreign banks totaled $138.7 billion, up 21.3% from $114.2 billion on June 30, 1986. Over the same period, the business loans of domestically owned U.S. banks rose by

Random Thoughts

By SANFORD ROSE

Which are the most efficient large banks in the country? Most analyses of bank efficiency focus on the control of noninterest expenses. There are a plethora of ratios used to demonstrate the degree of control. One study enumerates at least a dozen, the best of which is probably the relationship of noninterest expenses to spread income plus noninterest income — a ratio that will be discussed later in this article.

Still another approach analyzes efficiency in a much broader context than simple cost control. It concentrates on overall portfolio efficiency. An efficient portfolio is one that produces the maximum return for a given level of risk or the minimum risk for a given level of return.

Portfolio efficiency can be calculated by first measuring economic return. This is done by taking the portfolio spread over the riskless interest rate — that is, the rate on treasury securities of the same approximate duration as the assets in a given institution's portfolio —

Japan Increases Presence in US; UK Banks Decline

By KENNETH J. HICKS

NEW YORK — Japan continues to outpace other countries in total banking offices in the United States. With a net increase of nine offices from midyear 1986 to midyear 1987, Japanese banks accounted for more than one-third of the 25 foreign banking offices opened in the United States.

The number of Edge Act banks operated by foreign banks continued to decline in the twelve months ended June 30. After hitting a high of 41 in 1984, the number of Edge Act offices fell to 30 at midyear 1987. And over the past

RANDOM THOUGHTS

➳ Continued from Page 1

and subtracting average loan losses.

Then this expected economic return must be adjusted for its variability. Since the chief cause of earnings variability is unanticipated loan losses, returns must be divided by the standard deviation of losses, or the extent by which actual losses can deviate from average losses.

This calculation yields a ratio — the number of basis points of return for each basis point of risk. A bank can have a high-yielding portfolio that is nonetheless less efficient than a lower-yielding one because the return per unit of risk is smaller.

The marketplace tends to pay more for the earnings of banks with greater portfolio or asset efficiency. However, there are certain caveats. A bank can have a very high efficiency rating and still not find much favor with investors because although it is extracting very nearly the maximum return per unit of risk, it is quite simply assuming too little risk. Nevertheless, for banks as a whole, asset efficiency, defined as economic return divided by loan-loss variability, is a fairly good long-term predictor of stock-price performance — a better predictor, in fact, than return on assets or return on equity.

So, returning to the question posed at the outset, which banks rank as the most efficient in a broad portfolio sense? The performance of 49 of the 60 largest banks in the country was measured by Dimensional Corporate Finance of San Francisco for the period 1979 through 1986. For this period, the bank with the highest rating for asset efficiency — return divided by risk — was the former United Virginia Bank (now Crestar Bank — parent Crestar Financial Corp.). It posted a score of 38.2.

The second-place finisher was Wachovia Bank & Trust Co. (parent First Wachovia Corp.). Its economic return was much lower than that of the front-runner, but so was its risk quotient. Total asset efficiency — return per unit of risk — amounted to 34.3.

In third place was Fleet National Bank (parent Fleet Financial Group Inc.), with an efficiency rating of 28.7. The fourth-place finisher was the National Bank of North Carolina (NCNB Corp.), with a score of 28.0. In fifth place, with a rating of 20.8, was Meridian Bank (Meridian Bancorp). Its relatively high risk quotient was offset by the largest economic return among the 49 banks.

Other high finishers include Morgan Guaranty (a low return but also low risk), Connecticut National (a higher return but also higher risk), Wells Fargo, Valley National, and Philadelphia National.

Which were the least efficient? Well-informed people can readily guess. Suffice it to note that one large midwestern and one large West Coast institution had efficiency ratings of only around one.

It should be pointed out that efficiency, an ex-post phenomenon, depends to a certain extent on luck. If a bank has huge losses in just one or two of these eight years, the standard deviation of losses can rise mightily, reducing the value of the efficiency ratio. On the other hand, a bank with an outstanding efficiency rating for 1979-86 might since have fallen from grace if extensive chargeoffs surfaced last year.

□ □ □

For those who are accustomed to thinking about efficiency in terms of cost control — a valid though perhaps an incomplete preoccupation — David C. Cates, president of Cates Consulting Analysts, has some sage advice: Don't use total assets as the basis for measuring performance. In fact, don't use total assets as the denominator for evaluating profit performance in general.

When some 85% to 90% of bank expenses and earnings were asset-based, the use of ratios like overhead to assets or return on assets made sense. With the rise in nonasset-based revenues, such use is anachronistic and at times contributes to misleading analyses.

If a bank has a large and profitable trust business, its ratio of overhead to assets may be quite elevated. Does that mean it is weak in cost control? Not necessarily. What counts is the ratio of overhead to total operating income. That ratio may be falling at the same time as the ratio of overhead to assets is stable or rising. Thus, based on the traditional ratio, the bank has a cost-control problem, whereas in reality it may be becoming increasingly cost efficient.

Mr. Cates stresses the importance of the word "operating." That is, overhead and net income must be related to a denominator that has been purged of nonrecurring elements. He says: "It is quite useless and misleading to find that the ratio of overhead to income has dropped from 60% to 55%, if the cause of that drop is a one-time sale of the head-office building. Based on recurring income, the ratio may have actually risen to 61%, which is what we need to know in order to make projections."

Additionally, one must be careful in defining the elements of overhead. If the purpose of the analysis is to isolate true operating efficiency in relation to recurring operating income, one must separate from overhead various noncash charges (like amortization of goodwill) as well as the costs and writedowns associated with foreclosed properties (OREO).

Also, it is fair to adjust overhead to include, as an element of occupancy expense, the interest cost related to the institution's mortgage indebtedness, which is a logical supplement to lease rental payments. This last adjustment, notes Mr. Cates, requires a corresponding upward revision of net interest income.

Will such adjustments fundamentally affect the analyst's view of a bank? At times, yes. For example, the Atlanta banks in the late '70s were burdened with high levels of OREO, which temporarily inflated their overhead-to-income ratios. Some analysts correctly saw that these expenses would fade as the OREO was worked down — in other words, the banks were not chronically high cost. Therefore they formed a more optimistic view of investment possibilities than those who did not adjust for OREO-related expenses.

In summary, in Mr. Cates' opinion, there are several compelling advantages in moving away from profit and overhead comparisons that use assets or even equity as the relevant denominators and toward "virgin ratios" — the relationship between expenses and net income, properly defined, and operating income, also appropriately adjusted.

These advantages include: (1) establishing the primacy of income over assets as a profit determinant; (2) eliminating securities gains and losses and other nonrecurring events as distortions of recurring performance; (3) erasing the barrier between the measurement of asset-based and fee-based profitability, and (4) creating a common bond between profit measurement in banks and in other industries that compete for the same shareholder interest.

□ □ □

Mr. Cates has compiled some data on the pretax profit margin — the proportion of net to gross — for various size banks from 1982 through 1986. The margin is determined by combining the ratios "loan-loss provision to income" and "overhead to income" and subtracting this sum from 100%. Unfortunately, the New York analyst has not yet separated the nonrecurring elements from income, so that the margin may be inflated by such one-time transactions as asset sales.

Nonetheless, the figures on the overall bank profit margin are instructive, especially when compared to margins realized in trust operations — that is, in trust operations at institutions with $25 million or more in trust-fee income. For example, the pretax margin at money center banks fell from 28.7% in 1982 to 24.2% in 1986. The margin at banks with over $10 billion in assets, including the money center banks, declined from 28.9% to 25.8%. In each case, the rise in the loan-loss provision more than offset the relatively minor improvement in the overhead ratio.

By contrast, the trust profit margin increased from 27.5% in 1982 to 33.4% in 1986, which of course expresses the fee consequences of the bull market in stocks and bonds for most of this period. As a result, argues Mr. Cates, trust departments appear to be generally more profitable, per dollar of operating income, than the banks that shelter them.

Of course, such comparisons must take into account the issue of earnings quality, which in turn depends on the relative variability of the income streams, their secular growth trends, and the imputed cost of capital required to maintain each function. Although a precise examination of earnings quality is not available, Mr. Cates hazards the guess that the trust profit is not only larger but generally of higher quality than that of many other bank earnings streams, especially that emanating from corporate lending. The implications for bank restructuring are patently obvious.

□ □ □

Finally, Mr. Cates essays an examination of the relationship between the pretax profit margin and ROA and ROE to see whether there is any correlation — and if not, why not. He chooses the year 1986 because of the complication of last year's special reserve allocation.

In 1986, Morgan Guaranty showed a pretax margin of 50%, while State Street Boston and Citibank South Dakota posted returns of 30% and 27%, respectively. Measured according to ROE, Morgan made 19%, State Street got 19.9%, and Citibank South Dakota came in with 29.1%.

Morgan trailed Citibank South Dakota because the latter's very high asset yield translated into a huge net interest margin and a lush ROA of 2.58%. Hence, despite the fact that Morgan was actually more levered than the credit-card bank, it could not compete in ROE terms.

Similarly, although Morgan had a higher profit margin than State Street, its ROE was lower. State Street derived a much higher proportion of its revenues than did Morgan from asset-unrelated businesses. Thus it required less capital than did the New York bank to buttress its unique mix of business. The extra leverage helped push State Street's return on equity above Morgan's.

Mr. Cates derives two lessons from these comparisons. First, the lower the gross yield on assets, the higher must be the operating profit

All data totals and the number of offices shown here— under each office type— are for the banking offices providing data for the survey. **C&I loans, deposits and assets** for June 30, 1987 and June 30, 1986 were used for **all** banking offices. **(a)**— Commercial bank number count includes bank head offices only. Branches of these banks are not included. **(b)**— Edge bank number count includes Edge branches. To avoid double counting, data for Edge banks, which are subsidiaries of foreign bank-owned U.S. commercial banks, are excluded from the totals for C&I loans, deposits, and assets. **(c)**— The total for 1986 has been restated **to exclude** finance companies. **(d)**— The asset, deposit, and C&I data for all U.S. banks are from the Federal Reserve Bulletin. The number of U.S. banks includes all U.S.-chartered, FDIC-insured commercial banks; the U.S. branches and agencies of foreign banks; all U.S. Edge Act bank offices; and New York State investment companies. These data were provided by the Federal Deposit Insurance Corporation, and Federal Reserve Board. **(‡)**— The total number of U.S. banking offices of foreign banks— including those offices for which data were not available— were 664 on 6/30/87 and 638 on 6/30/86. **(e)**— The ratio is all U.S. offices of foreign banks— including those for which data were not available— divided by all U.S. banking offices. **(r)**— Revised since publication on 4/9/87.

Growth in C&I Loans, Deposits, and Assets at U.S. Banks

Foreign Bank-Owned U.S. Banks Compared with U.S.-Owned Banks from 6/30/82 to 6/30/87 (Dollar Amounts in Billions)

Foreign Bank-Owned U.S. Banks[1]	C&I Loans June 30	% Chg.	Deposits June 30	% Chg.	Assets June 30	% Chg.
1987	$138.5	+21.3	$314.0	23.0	$571.9	+24.1
1986	$114.2	+ 8.0	$255.3	− 1.6	$461.0	+ 8.7

1981	$ 69.2	.....	$126.0	.....	$261.6	.....
U.S.-Owned U.S. Banks[2]						
1987	**$419.5**	+ **4.4**	**$1,609.4**	+ **4.5**	**$2,158.5**	+ **5.3**
1986	$402.0r	+ 6.2r	$1,540.8r	+10.0r	$2,050.7r	+ 8.9r
1985	$378.6	+ 5.2	$1,400.3	+ 7.3	$1,883.3	+ 8.6
1984	$360.0	+15.8	$1,304.7	+ 3.2	$1,734.6	+ 3.2
1983	$311.0	+ 2.4	$1,264.8	+ 7.4	$1,681.4	+ 7.1
1982	$303.7	+ 9.9	$1,177.2	+ 6.0	$1,569.3	+ 6.4
1981	$276.3	.....	$1,110.7	.....	$1,474.9	.....

Data for this table are calculated by American Banker using its survey data of foreign banks in the U.S. and the Federal Reserve Board's aggregate data on all banks in the U.S. **(1)**— Foreign bank-owned U.S. banks include: commercial bank and Edge bank subsidiaries; branch and agency offices; and New York investment companies. **(2)**— U.S.-owned U.S. banks include all commercial banks and Edge banks in U.S. that are not owned by foreign banks. **(r)**— Revised since publication on 4/9/87. **Note:** Data for 1985 were not adjusted for the sale of Crocker National Bank, San Francisco, by Midland Bank PLC, London, to Wells Fargo Bank NA, San Francisco. Thus, 1986 growth is understated for foreign-owned U.S. banks and overstated for U.S. owned U.S. banks.

Sources of Data: American Banker questionnaire and data from the Federal regulatory Consolidated Report of Condition provided to American Banker by ADP Data Services Division, New York. Data are for U.S.-chartered commercial banks 50% or more owned by foreign banks. Banks owned by foreign individuals are excluded. Total C&I Loans outstanding are commercial and industrial loans reported on a consolidated basis to include a bank's domestic and foreign branches and its Edge bank subsidiaries. Domestic C&I Loans are commercial and industrial loans booked in a bank's domestic offices only. **Deposit rank:** bank's rank among all U.S. banks on 6/30/87. **(a)**— On 2/16/88 California First Bank signed a letter of intent with Standard Chartered Bank Plc to acquire Union Bank, Los Angeles, for $750 million. The transaction will require the signing of a definitive agreement and approval by shareholders and regulators. **(b)**— Bank is owned by (1) Philippine National Bank; (2) Land Bank of the Philippines; (3) Development Bank of the Philippines; (4) Philippine Government Services Insurance System; and (5) Philippine Social Security System. **(c)**— Owned by three banks of the Audi Group: (1) Banque Audi, Bierut; (2) Bank Audi (Switzerland), Zurich; and (3) Banque Audi (France), Paris. **(d)**— A financial services holding company which owns Banco Popular Dominico, Santo Domingo. **(e)**— Owned by six European banks: (1) Amsterdam-Rotterdam Bank; (2) Creditanstalt-Bankverein, Vienna; (3) Deutsche Bank, Frankfurt; (4) Midland Bank Plc., London; (5) Societe Generale de Banque, Brussels; and (6) Societe Generale, Paris. **(f)**— Bank was established on 1/1/87, and parent closed its New York branch. Data for 6/30/86 were for Banco Safra, New York branch. **(g)**— The bank, which is part of the Al UBAF Banking Group, Neuilly, France, has 20 shareholders. They are: (1) Alahli Bank of Kuwait; (2) Arab African International Bank, Cairo; (3) Arab Bank Ltd., Aman, Jordan; (4) Bankers Trust New York Corp.; (5) Banque du Maroc, Rabat, Morocco; (6) Central Bank of Egypt, Cairo; (7) Commercial Bank of Syria, Damascus; (8) First Chicago Corp.; (9) Government of the Sultanate of Oman, Directorate General of Finance, Muscat; (10) Libyan Arab Foreign Bank, Tripoli; (11) National Bank of Abu Dhabi, United Arab Emirates; (12) Riyad Bank, Jeddah, Saudi Arabia; (13) Security Pacific Corp., Los Angeles; (14) Sudan Commercial Bank, Khartoum; (15) Texas Commerce Bancshares Inc., Houston; (16) U.B.A.E. Arab German Bank SA, Luxembourg/Frankfurt; (17) U.B.A.E. Arab Italian Bank SpA, Rome; (18) UBAF Bank Ltd., London; (19) UBAN International Ltd., Hong Kong; and (20) UBIC Nederland B.V., The Hague. **(★)**— Bank is new to the survey.

Source of Data: ADP Data Services Division, New York. Data are from the Federal regulatory Report of Income for June 30, 1987, and December 31, 1986. ADP calculates the **return on average assets** for the first half of 1987 by annualizing net income for the first half of 1987 and dividing that figure by average assets over the period. Report of Income data were not available for seven banks. **(★)**— Indicates that the bank is new to the survey. **Note:** Caution is advised in interpreting the profitability of foreign banks' U.S. operations. A foreign bank's global revenue maximization strategy may find it more profitable not to show sizable profits in its U.S. bank subsidiary.

Compiled from data taken from American Banker questionnaire and the Federal Reserve Board's report of assets and liabilities of U.S. branches and agencies of foreign banks for June 30, 1987. All data are as of June 30. C&I loans are commercial and industrial loans. (a)— Listed as Governor & Co. of Bank of Ireland last year. (b)— Listed as Compagnie Financiere de Credit Industriel et Commercial last year. (c)— Converted from an agency to branch between June 30, 1986, and June 30, 1987. (d)— Listed as Danske Provinsbanken last year. (e)— Inadvertantly omitted from last year's branch listing. (f)— Has 2 branches in New York. (g)— Branch was classified as an agency in 1986, but now is considered a branch by Federal Reserve because it has been granted special powers by New York State to issue large denomination deposits. (h)—Includes 3 New York branches, one of which is not FDIC insured. (i)—Includes 10 New York branches. (k)—Has 3 branches in New York. (m)—An agency under state law, but considered a branch by Federal Reserve because it has special powers, granted under New York state law, to issue large denomination deposits to both foreign and domestic residents. (s)—Includes branches in Christiansted and Frederiksted. (t)—Includes branch in St. Thomas. (x)—Has a international banking facility (IBF) office. (H)—Office is located in the bank's "home state." (★)— New branch office opened between June 30, 1986, and June 30, 1987. N.A.—Not available.

Compiled from data taken from American Banker questionnaire and the Federal Reserve Board's report of assets and liabilities of U.S. branches and agencies of foreign banks for June 30, 1987. All data are as of June 30. C&I loans are commercial and industrial loans. (a)— Began opearations May 1, 1987. Banco Atlentico, Barcelona, Spain, owns 51% of Banco de Iberoamerica, Panama City. Banco de Iberoamerica closed its Miami agency and shifted its assets and liabilities to Banco Atlantico. The 1986 data were for Banco de Iberoamerica. (b)—Under New York State banking law, some agencies have been granted power to issue large denomination deposits to both foreign and domestic residents. For that reason, the Federal Reserve considers these agencies as branches. American Banker also classifies these agencies as branches. In the listing of New York branches, these special agencies are identified with a footnote "m". (c)— Was classified as a branch in last year's listing. (d)— Inadvertantly listed in Dallas in last year's listing. (e)— Converted to an agency from an Edge bank in July, 1986. (x)— Has a international banking facility (IBF) office. (H)— Office is located in the bank's "home state." (★)— New agency office opened between June 30, 1986, and June 30, 1987.

New York Investment Company: A corporation organized under Article XII of the New York State Banking Law. An investment company is similar to a state-chartered commercial bank. However there are three major differences: (1) an investment company is not subject to the 10% lending limitation, while a commercial bank cannot lend to any one person an amount greater than 10% of its capital stock, surplus, and undivided profits; (2) an investment company has no restriction on investing in stocks of corporations, while banks cannot acquire the stock of any corporation; and (3) an investment company cannot accept deposits, but can only maintain credit balances incidental to the conduct of its lawful business. **(a)**— American Scandinavia Banking Corp. was formerly owned by American Scandinavia Group. The group was comprised of four banks: Christiana Bank og Kreditkasse, Oslo; Danske Bank, Copenhagen; Post-och Kreditbanken, Stockholm; and Union Bank of Finland Ltd., Helsinki. **(b)**— Formerly known as Nordic American Banking Corp.. Changed title and ownership on Jan. 21, 1986. It was owned by four European Banks: Copenhagen Handelsbank, Denmark; Kansallis Osake-Pankki, Helsinki;3. Norske Creditbank, Oslo; and Svenska Handelsbanken, Stockholm. **(c)**— Formerly known as Belgian General Banking Corp. **(d)**— Owned by a group comprised of individuals; Venezuelan industrial companies; and Banco la Guaira International, Caracas. **N.A.**— Not available. **(★)**— New to the survey.

Sources of data: American Banker questionnaire and data from the Federal Reserve Board's reports of assets and liabilities for these respective banking offices as of June 30, 1987. Also, data for some commercial banks were provided by **ADP Data Services Division, New York,** from their data base derived from Federal Reserve Board call report. **Description of this listing:** Included in this listing are the U.S. banking offices of foreign banks for which data have been received, either directly by American Banker, or indirectly from the various data sources listed below. If data were not available, the office is not listed. Also, this year, finance company data are no longer included in the totals. For banks with finance company subsidiaries, the 1986 data have been restated to exclude these subsidiaries. In this listing, foreign countries are listed alphabetically. Within a country, the banks are listed alphabetically. All data are as of June 30. C&I loans are commercial and industrial loans, which are commonly known as business loans. **(a)**— Assets shown are for 12/31/86, or nearest fiscal yearend, for banks providing data for World Bank listings published July, 1987. For other banks, latest available data was used. **(b)**— Ratio represents the June assets of the bank's U.S. office(s) to the bank's total worldwide assets the previous yearend. **(c)**— Office types are: A=Agency; B=Branch; C=Commercial Bank; E=Edge bank; Eb=Branch of Edge bank; and I=Investment company. Abbreviations for locations are:ATL=Atlanta; BOS=Boston; CHI=Chicago; DAL=Dallas; DC=Washington, D.C.; LA=Los Angeles; MIA=Miami; NY=New York City; PHI=Philadelphia; PIT=Pittsburgh; SF=San Francisco; HOU=Houston and SEA=Seattle. **(d)**— Listed as Danske Provinsbank last year. **(e)**— Bank is, in turn, owned by Compagnie Financiere de Credit Industriel et Commercial, Paris. Last year, bank was listed as Credit Industriel et Commercial. **(f)**— Has a finance company subsidiary. This year, finance company subsidiaries are not included in the totals. The 1986 figures have been restated to exclude finance company data. **(g)**— Overseas Union Bank owns International Bank of Singapore, Ltd. The latter bank has a San Francisco agency which is included in the Overseas Union Bank totals. **(h)**— Bank is also known as Swiss Credit Bank. New York branch is listed as Swiss Credit Bank. **(i)**— The bank—UBAF Arab American Bank, New York— is part of the Al UBAF Banking Group, Neuilly, France. The bank has 20 shareholders. These 20 shareholders are: (1) Alahli Bank of Kuwait; (2) Arab African International Bank, Cairo; (3) Arab Bank Ltd., Aman, Jordan; (4) Bankers Trust New York Corp.; (5) Banque du Maroc, Rabat, Morocco; (6) Central Bank of Egypt, Cairo; (7) Commercial Bank of Syria, Damascus; (8) First Chicago Corp.; (9) Government of the Sultanate of Oman, Directorate General of Finance, Muscat; (10) Libyan Arab Foreign Bank, Tripoli; (11) National Bank of Abu Dhabi, United Arab Emirates; (12) Riyad Bank, Jeddah, Saudi Arabia; (13) Security Pacific Corp., Los Angeles; (14) Sudan Commercial Bank, Khartoum; (15) Texas Commerce Bancshares Inc., Houston; (16) U.B.A.E. Arab German Bank SA, Luxembourg/Frankfurt; (17) U.B.A.E. Arab Italian Bank SpA, Rome; (18) UBAF Bank Ltd., London; (19) UBAN International Ltd., Hong Kong; and (20) UBIC Nederland B.V., The Hague. **(j)**— Owned by three banks of the Audi Group; (1)-Banque Audi, Beirut, Lebanon; (2)-Bank Audi (Switzerland), Zurich; and (3)-Banque Audi (France), Paris. **(k)**—The bank is owned by the following five Philippine banks: (1)-Philippine National Bank; (2)-Land Bank of the Philippines; (3)-Development Bank of the Philippines; (4)-Government Services Insurance System; and (5)-Social Security System. **(l)**—Owned by six European banks: (1)-Amsterdam-Rotterdam Bank, Netherlands; (2)-Creditanstalt-Bankverein, Vienna, Austria; (3)-Deutsche Bank, Frankfurt, Germany; (4)-Midland Bank Plc., London; (5)-Societe Generale de Banque, Brussels; and (6)-Societe Generale, Paris. **(m)**— A financial services holding company which owns Banco Popular Dominico, Santo Domingo. **(n)**— Owned by a group comprised of individuals; Venezuelan industrial companies; and Banco la Guaira International, Caracas. **(*)**— Office is in the foreign bank's "Home State". **(★)**— New to the survey. **N.A.**— Not Available.

Definitions and Data Sources

American Banker's study of foreign banking in the United States shows the business loans (commercial and industrial loans), deposits, and assets of the full banking offices of foreign banks in the U.S. as of June 30, 1987.

Full banking offices of foreign banks in the U.S. include commercial bank subsidiaries more than 50% owned, branches, agencies, Edge Act banks, and New York State investment companies. This year, American Banker has excluded finance companies from the definition of banking offices. The 1986 figures for banks with a U.S. finance company subsidiary have been restated to exclude the finance company.

The major source of the data for this survey comes from an American Banker survey questionnaire sent to each of the more than 600 foreign banking offices in the U.S. This questionnaire asked for data from the various Federal Reserve Board quarterly condition report that these offices are required to complete. More than 50% of the offices were kind enough to respond to our data request.

For the remaining 50%, data were taken directly from the various Federal Reserve reports. These reports were purchased by American Banker from the National Technical Information Service, U.S. Department of Commerce, Springfield, Va. In addition, the data for those reporting directly to American Banker were checked against their respective Federal Reserve reports.

According to the International Banking Act of 1978, an agency is "any office or any place of business of a foreign bank located in any state of the United States or District of Columbia at which credit balances are maintained, checks are paid, or money is lent, but at which deposits may not be accepted from a citizen or resident of the United States."

A branch is defined as "any office or any place of business of a foreign bank located in any state of the United States or District of Columbia thay may accept domestic deposits that are incidental to, or for the purpose of, carrying out transactions in foreign countries."

In New York state, a large number of agencies of foreign banks have been granted powers by the state to issue large-denomination deposits to both domestic and foreign residents. For that reason, *American Banker* follows the Federal Reserve Board's policy of classifying these agencies as branches. These agencies are listed in the branch listing and are identified by a footnote 'm" after their name.

The U.S. branches and agencies of foreign banks are required to submit to the Federal Reserve Form FFIEC 002: "Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks" on a quarterly basis.

An Edge Act banking corporation is a nationally chartered organization set up to engage in international banking and investment, under the rules established in the 1919 Edge Act. The International Banking Act of 1978 permitted foreign banks to establish Edge banking offices.

An Edge bank can make loans, accept deposits, and provide a wide range of banking services, but all of these must be directly related to foreign or international transactions.

An Edge bank is required to submit to the Federal Reserve Board Form FR2886B: "Report of Condition for Edge and Agreement Corporations" on a quarterly basis. These are unconsolidated data for the Edge and for each domestic branch of the Edge.

An investment company, which is established under Article XII New York State banking law, is similar to a state-chartered commercial bank. However there are three major differences: (1) an investment company is not subject to the 10% lending limitation, while a commercial bank cannot lend to any one person an amount greater than 10% of its capital stock, surplus, and undivided profits; (2) an investment company has no restriction on investing in stocks of corporations, while banks cannot acquire the stock of any corporation; and (3) an investment company cannot accept deposits, but can only maintain credit balances incidental to the conduct of its lawful business. Only investment companies more than 50% owned by foreign banks are included in the listings.

An investment company is required to submit to the Federal Reserve Board Form FR2886A: "Quarterly Report of Condition for A New York Investment Company and its Domestic Subsidiaries."

The U.S. commercial bank subsidiaries of foreign banks are required to complete one of four forms— Form FFIEC 031-034— depending on the size of the institution and whether or not it has foreign branches. This report, entitled "Consolidated Reports of Condition and Income," is generally referred to as the "call report." For the banks not completing the American Banker questionnaire, call report data were obtained by American Banker from **ADP Data Services, New York.** ADP maintains a computer tape of the the Federal regulatory call reports.

1 Commercial and industrial loans are defined as loans for commercial and industrial purposes to business enterprises (proprietorships, partnerships, and corporations), whether secured or unsecured, single payment or installment. These loans may take the form of direct or purchased loans, such as commercial paper or bankers acceptances.

For commercial banks, data are consolidated, including these banks' domestic and foreign branches and their Edge bank subsidiaries.

Japanese Banks Continue as Dominant Foreign Presence in US

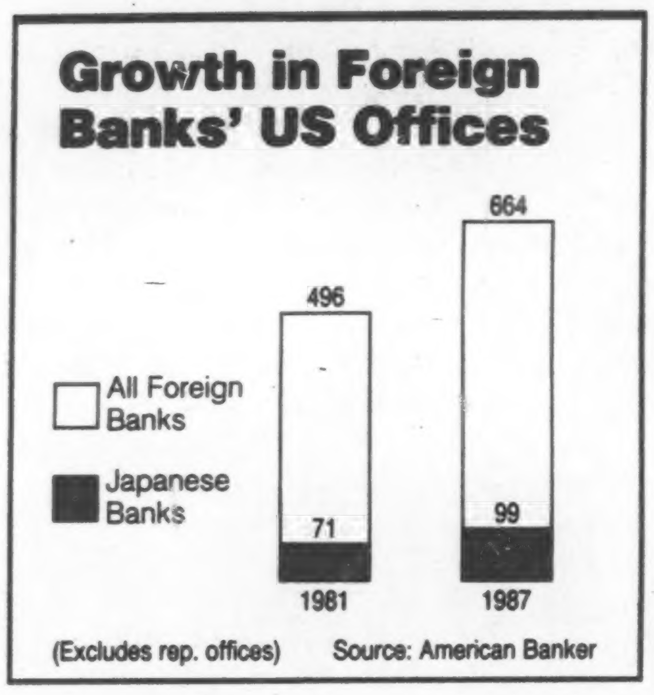
→ Continued from Page 1

five years, foreign bank branches have had the highest growth rate of any type of office.

These are among the findings of the *American Banker's* annual survey of U.S. banking activities of foreign banks.

Foreign banks had a total of 1,014 offices in the U.S. as of June 30, an increase of 39 from the previous year. Total offices include full banking offices — branches, agencies, commercial bank subsidiaries, Edge Act banks, and New York State investment companies — plus representative offices. These offices were located in 58 U.S. cities, two more than in 1986.

By far the most prevalent foreign banks in the U.S. are the Japanese with 30 institutions, an increase of three from midyear 1986. These banks control 99 full banking offices, excluding representative offices. That accounts for 20.3% of all foreign branches and agencies in the United States. In the past two years, Japanese banks have opened 21 of the 51 new foreign banking offices in the U.S.



According to the Japan Economic Institute of America, a Washington-based nonprofit organization funded by the foreign ministry in Japan, Japanese banks have also been moving into the Midwest.

For instance, after Toyota established an automobile manufacturing plant in Lexington, Ky., four Japanese banks opened representative offices there to assist in financing, wire transfers, and negotiating local banking arrangements. They are Mitsui Bank Ltd., Sanwa Bank Ltd., Tokai Bank Ltd., and Bank of Tokyo Ltd. These offices were not included on the U.S. Treasury's list of foreign offices and are not reflected in today's survey.

All told, representative offices grew by 33 to 350; branches increased by 15 to 340; commercial bank subsidiaries were up 8 to 89; agencies rose by 6 to 193; investment companies increased by 1 to 12; and Edge Act banks declined by 4 to 30.

Edge Act banks — both U.S. and foreign — have been decreasing in number for the past several years. An Edge corporation is a nationally chartered organization established to engage in international banking and investment under rules established in the Edge Act of 1919. An Edge bank can make loans, accept deposits, and provide a wide range of banking services, but all must be directly related to foreign or international transactions.

A Federal Reserve Board official noted that part of the reason for the decline of Edge Act banks is the Latin American situation. During the 1970s and early 1980s, banks were opening up these offices to attract Latin American business. Since then, the cash flow from that region has declined and Edge banks have followed suit. Of the four Edge banks closed between midyear 1986 and midyear 1987, three were in Miami and one was in Houston.

The Fed spokesman also said that changes in the structure of U.S. banking have given an impetus to the move away from Edge corporations. In the past, banks used Edge Act offices as a vehicle to enter other states. Since previously restrictive states such as Texas have made it easier to operate foreign offices, some foreign banks have opted to use branches and agencies for their banking presence. Standard Chartered Bank PLC, London, converted its Houston Edge Act bank into an agency in October 1986.

The number of offices for United Kingdom banks, the second largest foreign bank segment in the U.S., continued to decline. U.K. banks decreased to 12 from 14 at midyear 1986, and total offices also declined to 47 from 51. Commercial and industrial loans increased 7.1% to $13.9 billion, while deposits and assets showed negligible increases of 0.3% and 0.2%, respectively.

On Feb. 16, Standard Chartered signed a letter of intent to sell its California commercial bank subsidiary, Union Bank, to California First Bank. Bank of Tokyo Ltd. owns 77% of California First. Earlier in the year, Standard Chartered agreed to sell United Bank of Arizona to Citicorp. Also in 1987, Barclays Bank PLC sold its California subsidiary, Barclays Bank of California, to Wells Fargo Bank. Lloyds Bank of California, which had assets of $2.4 billion in 1986, was sold to Sanwa Bank Ltd., which was then merged into Sanwa Bank California in September of that year.

- New York remained the top location for foreign bank offices, with 435, a net increase of 14 from the year-earlier period. Included in that total are 214 branches, 140 representative offices, 33 commercial bank subsidiaries, 29 agencies, 12 investment companies, and 7 Edge Act banks.
- Los Angeles was a distant second, with 118 foreign bank offices, four more than in 1986. Sixty-one of those offices were agencies and 21 were branches. Los Angeles was followed by: Chicago at 81, up 1 office; Houston at 77, an increase of 5; and San Francisco at 70, up 3 from the previous year.

- Two new investment companies were opened after midyear 1986. Banque Worms Capital Corp., owned by Banque Worms, Paris, opened its doors on Jan. 1, 1987. Banque Worms did not have commercial and industrial loans or deposits and credit balances on June 30, 1987, but it reported assets of $5.5 million; and PKBanken International U.S. Banking, a subsidiary of PK Banken, Stockholm, became active on Oct. 22, 1986. At midyear 1987, PKBanken reported commercial and industrial loans of $303.6 million, assets of $355.8 million, and deposits and credit balances of $425,000.

- Today's listing of foreign-bank-owned commercial banks includes for the first time the four New Mexican subsidiaries of Banco de Vizcaya, Bilboa, Spain's seventh largest bank. The four banks — Banquest National Bank, Albuquerque; San Juan National Bank, Farmington; Banquest First National Bank, Santa Fe; and Banquest First State Bank, Taos — had combined corporate and industrial loans of $59.4 million and assets of $341.7 million.

...affordable, comprehensive, *and* quarterly...

Depository Institutions Performance Directory
by Lyons, Zomback & Ostrowski, Inc.

This valuable directory, packed with vital data, analysis and commentary, helps you monitor the financial health of every FDIC- or FSLIC-insured depository institution in the country–including commercial banks, savings and loan associations, savings banks, and bank holding companies.

For every insured institution, the **Directory** gives you the latest quarterly figures from the Federal Reserve Board, *plus* the past three years' data on:

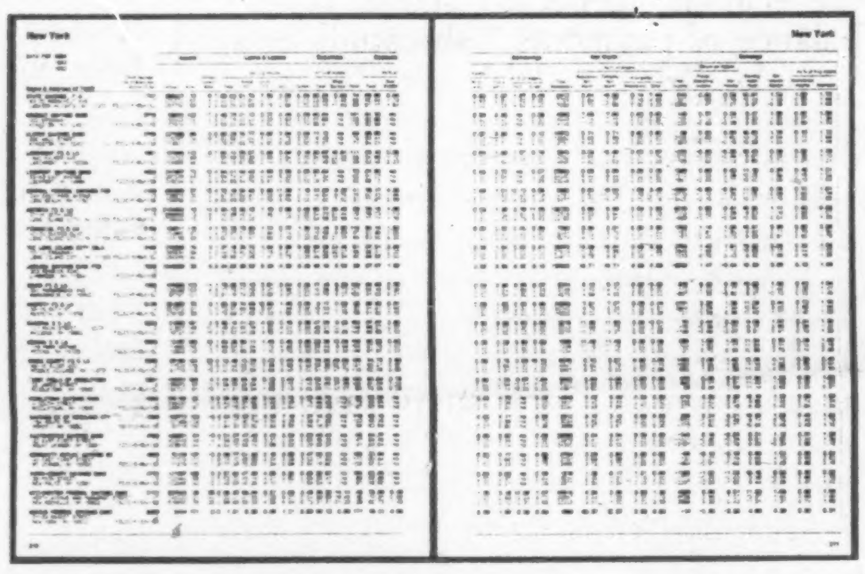
Profitability
- Return on Assets
- Earning Asset Yields and Net Interest Margins
- Non-Interest Income and Overhead Levels

Capital Adequacy
- Regulatory Capital Ratios
- Intangible Asset Levels

Commercial Bank Asset Quality
- Net Charge-Offs
- Sub-Quality Assets and Reserve Levels

Size and Growth
- Asset and Deposit Rankings and Growth Rates

Balance Sheet Structure
- Commercial, Real Estate, and Consumer Loan Levels
- Deposit Levels and Dependence on Large Denomination Deposits



Asset and Deposit Rankings

PRICE: $295.00 3 Volume Set

The thorough peer group coverage in the **Directory** allows you to evaluate your institution's performance by comparing it *directly* to that of competitive institutions. You discover firsthand what kinds of services the competition is offering...how well a particular management strategy worked last year...what types of deposits are being taken in...what kinds of loans are being offered...how many branches an institution has...and more. Best of all, this vital information is completely updated *every quarter.*

Successful bank strategies are what count. You can improve your bottom line, as long as you have all the available information. And it's all here in **Depository Institutions Performance Directory.**

Foreign Banks in US Boost Loan Purchases

➔ Continued from Page 1

only 4.4%, to $419.5 billion from $402 billion.

A Federal Reserve Board study, published last July, found that nine large U.S.-owned banks — Citibank, Bank of America, Chase Manhattan Bank, Morgan Guaranty Trust Company of New York, Manufacturers Hanover Trust Co., Chemical Bank, Bankers Trust Co., Security Pacific National Bank, and First National Bank of Chicago — sold $25.1 billion in business loans as of March 31, 1987.

"About 45% [$11.2 billion] of the outstanding loans sold by the nine banks were on the books of U.S. agencies and branches of foreign commercial banks," the Fed study said. "Moreover, almost one-half of their remaining loans sold went to a group of 'other' purchasers, among the most important of which were foreign offices of foreign banks."

If the nine large banks had retained all those loans on their books, business loans at U.S.-owned banks would have risen by about 9.5% in the year ended June 30, 1987, and business loans at the U.S. offices of foreign banks would have grown by 11.5% instead of 21.3%. Thus, the sale of loans by these nine banks accounted for more than 46% of the growth in business loans posted by the U.S. offices of foreign banks last year.

The survey found that 30 Japanese banks, operating through 99 U.S. offices, had $61.6 billion in business loans on June 30, 1987. That was up 43.9% from the $42.8 billion in business loans held by the 90 U.S. offices of the 27 Japanese banks operating in the U.S. on June 30, 1986. Japanese banks accounted for 44.5% of the business loans held by all foreign banks in the United States at midyear 1987, up from 37.5% a year earlier.

"The large Japanese banking community in the U.S. enables the big, well-known Japanese banks to efficiently participate out loans to the smaller, second- and third-tier Japanese banks in the U.S., which have little or no market recognition," said one foreign banker based in New York. "A large Japanese bank can take a $100 million position on a loan in the morning and have only $20 million of that loan on its books by evening."

A study of Japanese banks in the United States, published last month by the Japan Economic Institute of America, an organization funded by Japan's foreign ministry, lists factors that have contributed to the recent surge in the expansion of Japanese banks abroad — especially in the United States.

"One reason is Japan's capital market liberalization. Investment funds, once restricted, are now generally free to move into or out of Japan," the study said.

"Another reason is growth, both in the economy generally and in Japan's balance of payments," the study continued. "It is inevitable that Japanese investors and borrowers would like to diversify. As the largest and best-developed financial system in the world, the United States cannot be ignored.

"Another powerful motive for Japanese banks to move to the United States [is] the presence of their Japanese customers," the study said. For example, the study cites Mitsui Bank, which opened a representative office in Lexington, Ky., to help service the new Toyota auto plant there.

A fourth reason, the study said, is that the U.S. banking system offers Japanese banks opportunities to expand into areas prohibited at home. "For example," the study said, "city banks cannot engage in trust banking in Japan, but are free to offer these services in the United States. Most have established subsidiaries to do just that."

Impetus Has Changed

Several years ago, the major impetus for the sale of assets by U.S.-owned banks was the higher capital adequacy requirements imposed on commercial banks by federal regulators. Limiting asset growth was a way to bolster a bank's capital-assets ratio. Loan-participation sales also produce revenue for a bank without increasing loan risk. This factor was especially important to the large banks that had problems with foreign and energy-related loan portfolios.

"U.S. banks now view the asset sales area as a new profit center for the bank," according to a New York officer of a large West German bank. "And participations enable these banks to price their loans lower than a conventional credit."

Foreign banks in the U.S. are the chief buyers of those loans, for a number of reasons. "Several years ago, many foreign banks came into the U.S. market as second-tier participants," said an officer of a large French bank operating in New York. "Our recognition in the marketplace was low, and we took what we could get, because we needed to build up the asset side of the balance sheet.

"Today, our recognition and acceptance by American corporate customers has grown," the French banker said. "And we are now more familiar with the U.S. market and are more comfortable with buying pieces of securitized loans. In addition, the market's perception of securitization has changed. It has become the respectable thing to do. It's routine now."

Securitization is the sale of financial assets by an institution. The purchaser of a security invests in the pool and not the issuer. Securitization provides a bank with liquidity and allows it to shift market risk to investors.

Other Survey Findings

- Hongkong and Shanghai Banking Corp., owners of Marine Midland Banks Inc., Buffalo, remains the largest foreign bank in the United States in business loans. Hongkong had $7.5 billion in business loans outstanding in 20 U.S. offices at midyear 1987, up 6.3% from $7 billion the year before. The bank also leads foreign banks in deposits, with $19.6 billion, but fell from first place to fifth place in assets, with $25.5 billion on June 30, 1987.
- Four Tokyo-based banks surpassed Hongkong in assets held in their U.S. offices. They are Mitsubishi Bank Ltd., which is now the top foreign bank in terms of assets at U.S. offices, with $29.4 billion on June 30, 1987; Dai-Ichi Kangyo Bank Ltd., with $26.3 billion in assets; Bank of Tokyo Ltd., with $26.1 billion; and Fuji Bank Ltd., with $25.8 billion.
- Of the $138.5 billion in business loans booked in the U.S. offices of foreign banks at midyear 1987, 71% were booked through branch and agency offices, 27.5% through commercial bank subsidiaries, and the remaining 1.5% through Edge Act banks and New York State investment companies.
- Foreign banks had 1,014 U.S. offices at midyear 1987, up from 975 a year earlier. There were 350 representative offices, 340 branches, 193 agencies, 89 commercial bank subsidiaries, 30 Edge Act banks, and 12 New York State investment companies.
- New York City is the home of 435 of these offices, or 43% of all foreign bank offices in the United States. The next six largest cities for foreign bank offices — Los Angeles, Chicago, Houston, San Francisco, Miami, and Atlanta — have a combined total of 424 offices.
- The United Kingdom follows Japan, with the second largest foreign banking presence in the United States. Twelve British banks have 47 banking offices, which held $13.9 billion in business loans, or 10% of the business loans held by all foreign banks in the United States. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our annual study of the U.S. banking operations of foreign banks meets your information needs. So would you spend a moment to give us some feedback? Please clip this questionnaire and return to William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

(1.) How would you **change** the section to make it more useful? What would you add?

(2.) What do you like **best** about the study of U.S. operations of foreign banks?

(3.) What do you like **least** about the survey and its presentation?

(4.) How do you use the information on operations of foreign banks in your work?

Job Volatility Linked to Overexpansion

The U.S. labor market is much more volatile than many managers believe, says a scholar at the University of California at Berkeley business school.

One in every nine jobs is destroyed and one in every eight is created each year, according to Jonathan Leonard, associate professor and an economist in the School of Business Administration's organization behavior and industrial relations group.

"The aggregate statistics hide huge job losses and gains," he said, adding that companies seem too quick to jump on a roller coaster when good times or hard times are at hand.

"When a company grows unusually fast one year, the best bet is that it will shrink the next year," Mr. Leonard said. "Firms seem to overreact to market conditions with an expansion-and-contraction, boom-or-bust pattern."

The tremendous rate of job creation in this country — far higher than in Europe or Japan — is a tribute to the entrepreneurial abilities of American business, he said. But the jobs created are more tenuous than are those overseas. Mr. Leonard believes that as much as one-fourth of the "natural" rate of domestic unemployment is caused by fluctuations in labor demand by individual firms.

Business managers can avoid the sharp layoffs of the boom-bust cycle by resisting the temptation to overexpand at the first hint of good news, he argues. Subcontracting to meet peak demands may be better than hiring a raft of new workers, according to the scholar.

Mr. Leonard's conclusions are contained in his recently published book, "Unemployment & the Structure of Labors Markets," published by Basil Blackwell Inc. Coedited by Kevin Lang, the book is a collection of papers by University of California economists investigating labor market structure, wages, and unemployment. ■

Bid for Irving Wins State Banking Board Nod

Company Vows to Continue Fight Against Hostile Takeover by Bank of New York

By GORDON MATTHEWS

NEW YORK — The New York State Banking Board on Thursday voted unanimous approval of Bank of New York Co.'s hostile bid for Irving Bank Corp. But Irving said it would continue to fight the takeover attempt, which if successful would be the first unwelcome acquisition of a major bank.

Bank of New York said it was "pleased and gratified" with the regulatory ruling, which came exactly five months after its bid for Irving was unveiled.

Federal Reserve Board approval is still required before Bank of New York can proceed with its $1.1 billion takeover. The board met Wednesday and Thursday on the matter. The Thursday meeting ended at 3 p.m., but by late in the afternoon no decision had been made public. It was not clear if a ruling would be announced Thursday evening.

News of the state banking board's 13-to-0 decision at midmorning sent the price of Irving's stock up sharply. In afternoon trading, Irving was quoted at $53.75, up $3.25 from Wednesday's close. Bank of New York Co.'s shares were unchanged at $29.625.

Irving said in a statement it "will continue to resist the Bank of New York's hostile takeover attempt." The state approval, it asserted, "does not change the nature of the proposal, which makes no business sense and is not in the best interests of Irving shareholders."

In an indication that it may be considering legal action, Irving charged that the state decision "appears clearly to run counter to the statutory standards for such approvals which the Banking Board is required to follow."

With full regulatory approval, the stage could be set for a proxy battle between two of New York's most venerable banks. Bank of New York was formed in 1784 by Alexander Hamilton, the nation's first Treasury secretary; Irving was founded in 1811 and named after Washington Irving, the author and diplomat.

First Wisconsin Restates Earnings To Register Loss

By JOHN P. FORDE

NEW YORK — First Wisconsin Corp. and Peat Marwick Main & Co. this week were reminded of the old saying that close only counts in horseshoes and hand grenades, not financial accounting.

Wisconsin's largest bank holding company will restate its 1987 earnings to show a $49 million loss after its accounting firm changed its mind on when to recognize income from the sale of a building.

A spokeswoman for the Milwaukee-based holding company said on Thursday that Peat Marwick, its auditor, decided that $57 million in income from the sale/leaseback of its headquarters must be included in

Auto Lenders File Formal Complaint Protesting Dealer Financing Practices

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Trade groups representing independent bankers and credit unions filed a formal complaint Thursday charging the credit subsidiaries of three major U.S. automakers with unfair and deceptive advertising.

The Independent Bankers Association of America and the Credit Union National Association asked the Federal Trade Commission to investigate the advertising practices of General Motors Acceptance Corp., Chrysler Financial Services, and Ford Motor Credit Co.

"The cut-rate financing offered by the captive subsidiaries is a blatant violation of the FTC Act, catching consumers in an illegal bait-and-switch operation," the groups said.

Spokesmen at Ford Credit and GMAC said they had not seen the complaint and could not comment. No one authorized to speak for Chrysler Financial could be reached yesterday.

A commission spokeswoman said the agency's credit practices division will look into the complaint and decide whether a full investigation is warranted.

Finance companies are exercising growing control over new-car loans, the complaint said — reaching almost 38% by the end of 1987 — while the share held by banks, thrifts, and credit unions is declining. How much of the 38% belongs to finance company affiliates of the car manufacturers is not indicated.

The bank and credit union trade groups argue that buyers are lured to car showrooms by advertisements promising low interest rates on loans from the manufacturer's finance com-

Dollar Dominates Swaps, Survey Shows

Deals in US Currency Outstrip Yen, Deutsche Mark by Far

By LISABETH WEINER
Midwest Bureau

CHICAGO — Interest rate and currency swaps totaling $225 billion were executed during the first half of 1987, according to a survey released by the International Swap Dealers Association.

While the association has kept track of interest rate swap activity since 1985, this is the first time the group has provided data on currency swaps.

"There was absolutely great demand for the currency swap numbers," said Patrick de Saint-Aignan, chairman of the International Swap Dealers Association and a managing director at Morgan Stanley & Co.

"When we do release the next survey, we will also include information on the amount of swaps [currency and interest rate] outstanding, as well as production. I think outstandings will be more than $1 trillion for swaps with average maturities of three years or more."

Swaps, developed in 1982, are corporate finance tools used by companies to hedge risk, reduce borrowing costs, or raise capital in foreign currency markets. Interest rate and currency swaps are agreements between counterparties to exchange debt obligations.

"These new figures furnish additional evidence that swaps are an increasingly dominant presence throughout the global marketplace," said Mr. Saint-Aignan. "Fueled by market volatility and currency fluctuations, the swap market has become universally recognized by financial managers around the world as an effective means of hedging portfolios against risk."

The U.S. dollar dominates as the major currency used in swaps. The survey concluded that transactions involving the dollar totaled $178 billion for the first half of the year. The yen was second with $28 billion, followed by the deutsche mark at $17 billion.

Mr. Saint-Aignan said the dollar's dominance in swap is "consistent with the role of dollar financing in the total world picture. No market has the depth and liquidity of the dollar market." He added, however, that it is not surprising to see the strength of the dollar swap market compared with other currencies.

"In every capital market, there are local currency needs, but also some amount of dollar swapping is needed which adds up to a large number. It's also possible some nondollar major dealers did not take part in the survey, which would create a statistical bias — and this is something we will have to look at."

Interest rate swaps also continue to outpace currency swaps. Volume in dollar interest rate swaps reached $138.7 billion in the first half of the year, with yen volume at $13.7 billion and deutsche mark volume at $10 billion.

In currency swaps, U.S. dollar volume was $39.2 billion, yen volume was $14.4 billion, and deutsche mark volume was $6.8 billion.

The International Swap Dealers Association, which released the survey at its third annual conference in San Francisco, said that 10,936 swaps were booked in the first half of last year, broken down into 9,321 interest rate and 1,615 currency swap deals. The average contract value was $20 million for interest rate swaps and $27 million for currency swaps.

The swap group said 51 dealers, representing the most active traders in 13 currencies, took part in the survey conducted by Arthur Andersen & Co. ■

Minnesota Independents Reverse Position, Back Interstate Banking

By ANDREA BENNETT
Midwest Bureau

Interstate Banking

CHICAGO — Minnesota's independent bankers, traditionally among the most vocal opponents of interstate banking, switched their position this week to support opening the state to banks across the country.

The Independent Bankers of Minnesota announced the shift during hearings on a bill that would allow the state's banks to expand into 12 additional states, provided they have reciprocal legislation. The regional bill passed the Senate Commerce Committee on a voice vote Tuesday.

The independent bankers maintain that converting to nationwide banking is better than taking a piecemeal approach. The association plans to work to amend the regional bill and make it a national one, said Reese Doffing, vice president of administration for the trade group.

"The Legislature is going to be dealing with it year after year," Mr. Doffing said. "Why not do it all now?"

The independent bankers' new position, however, conflicts with that of the state's major bank holding companies, which say they need more time to prepare for full nationwide banking.

"Our position is there should be a gradual transition to nationwide banking that allows banks to prepare for [it]," said Becky Malkerson, vice president of government relations at First Bank System Inc., Minneapolis, a major supporter of the bill moving through the Senate.

The bill would add the the following states to Minnesota's region: Colorado, Idaho, Illinois, Kansas, Michigan, Missouri, Montana, Nebraska, Oregon, Utah, Washington, and Wyoming. It contains no trigger to nationwide interstate banking, Ms. Malkerson said.

Since July 1986 the state has allowed banks to expand into Iowa, North Dakota, South Dakota, and Wisconsin if they have reciprocal legislation. Only Wisconsin has such a law.

No Nationwide Banking Position

The Minnesota Bankers Association supports the regional legislation but has not taken a position on nationwide banking, said Bill Zwart, associate counsel for the group.

There appears to be enough legislative support to amend Minnesota's interstate banking law this year so that some states are added to the region, bankers said. The move by the independent bankers could increase support for adding a national trigger to the bill, they said.

In addition to expanding the bill to encompass nationwide banking, the independent bankers will ask for safeguards, such as concentration limits and minimum capital requirements for banks coming in the state, Mr. Doffing said. ■

2 Congressmen Unveil Separate Consumer Bills

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Separate consumer rights bills introduced Thursday may provide a clue about the direction major banking legislation is taking in the House.

The two bills, from Rep. Charles E. Schumer, D-N.Y., and Rep. Joseph P. Kennedy 2d, D-Mass., were unveiled at a joint press conference complete with endorsements from Ralph Nader and other activists. The measures would direct banks to provide free services to the poor and would mandate increased monitoring of compliance with the Community Reinvestment Act.

The two lawmakers declined to say whether House Banking Committee Chairman Fernand J. St Germain, D-R.I., supports their bills. But Mr. Kennedy noted that the committee staff provided extensive help and that Mr. St Germain had been generally supportive. Banking committee staffers were present at the press conference as well.

The consumer bill would be Mr. Schumer's second contribution to banking legislation the committee is expected to consider next month. A bill introduced earlier would set permanent restrictions on insurance, securities, and real estate activities by banks.

Mr. St Germain has said little about the bill being drafted for committee consideration, but it is widely expected to follow the same direction as Mr. Schumer's bill. Close observers say committee staffers have encouraged that view.

A spokesman for the Consumer Bankers Association, stressing that he has not yet seen the fine print of either bill, said his organization objects to the major elements of both pieces of legislation.

No-Fee Checking for the Poor

The Schumer bill would require banks, thrifts, and credit unions to provide no-fee checking accounts for the poor and to issue identification cards at nominal cost, permitting government checks to be cashed without charge.

The bill mandates public disclosure of the geographic distribution of commercial loans by making such lending subject to the Home Mortgage Disclosure Act. It would establish voluntary organizations in each state to advocate consumer interests. Members would be solicited through inserts enclosed in monthly bank statements.

The Kennedy bill would establish a five-point rating scale for Community Reinvestment Act compliance. As a condition for approval of new powers — including powers currently authorized under the Bank Holding Company Act — an institution would be required to secure one of the two highest ratings. The reinvestment act ratings would be made public. Federal regulators would be required to establish a separate division of consumer affairs to develop rating standards and conduct reinvestment act examinations.

The rating system would evolve over five years so that a comparative approach could be taken, Mr. Kennedy said.

"Not all banks can be above average, so the regulators will have to make decisions about which banks perform better than others," he said. "Only the best should be allowed to get involved in nonbanking activities and interstate banking."

Mr. Schumer said the legislation is designed so that it can be attached to any bill reported out of the banking committee. ■

COMMENT

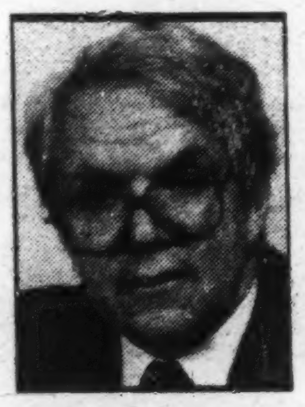
Moody's Actions Point Up Need for Agency Scrutiny

By DAVID C. CATES

MOODY'S INVESTORS Service became an outlaw last week, in my opinion. In its severe downgrades of most New York bank holding companies, the rating agency violated the public trust that its earlier reputation had earned for it. If there is a bright side to the damage, it is that peer review of rating agency world views and methods should now begin to limit the monopoly power over bank funding capacity these bureaucracies have so far been uncritically been awarded.

Let's begin with some history. In 1973, Moody's was the first to issue a bank holding company rating: Aaa on Bankers Trust New York Corp. Lewis Lapham of Bankers Trust had headed the industry committee that skeptically considered whether banks would cooperate with the agencies and finally decided to recommend such a posture. Within a few years, all money center bank holding companies and a few regionals had won triple-A ratings from Moody's or Standard & Poor's Corp. The agency theory at that time was that sheer size, coupled with market dominance; broad diversification of assets and funding; strong asset quality, liquidity, and capital; and reasonable profitability were required for a double-A or better.

Though the agencies understood from the outset (in advance of almost all other analysts) that the U.S. parent of a bank holding company had potential cash flow constraints to the extent it relied on bank subsidiaries, this awareness initially did not stand in the way of high bank holding company ratings.



We should never forget that the major rating agencies are far from bloodless Olympians hurling abstract thunderbolts from above the clouds. The two are locked in mortal combat for leadership image and revenue.

— David C. Cates

In those early days, only a few curmudgeons were heard to mutter such sentiments as this: "Triple-As are fine, but what happens when they try to bring us down to a single-A or worse? We can then neither refuse nor contest the rating. Aliens now control our funding destiny." Naturally, such views were ridiculed and overruled.

Crises Created

Some downgrades have in fact precipitated crises. For example, Moody's dropped the commercial paper rating of Northern States Financial to a Prime-3 in 1976, which stopped a dealer-issued program in its tracks and caused the Comptroller to save a bank holding company in order to save a bank. A few years later, Moody's dropped the commercial paper rating of First Pennsylvania to a Prime-3, which impaired not only the holding company's finances but also affected the bank's own uninsured funding, thus creating the immediate crisis that led to federal assistance.

Whether they were merited or not in those instances (yes, they were), the point here is simply that rating downgrades by a major agency can have an enormous affect on the market, especially for banks and bank holding companies, whose funding is its raw material.

Following the high water mark of the late 1970s, when there were a dozen triple-A-rated domestic bank holding companies, Moody's and S&P began downgrades in earnest. Moody's Money Center Bank Review of March 1982 laid out much of the rationale for the series of downgrades of our largest banks since then.

Moody's was rightly troubled by three factors. There was the problem of Third World debt. There was uncertainty about the strategic retooling required of New York banks if they were to retain the Fortune 1000 (among other constituencies) for any source of income. And there was the asset-quality problem that arose from the banks' rush to expand their domestic lending in the middle market.

As the downgrades continued throughout the 1980s, large foreign banks began to win triple-A ratings. By early 1987, S&P or Moody's had awarded triple-As to about a dozen foreign-owned banks. Since then, they have lost some of their original luster with the rating agencies, but there are still 29 foreign banks rated triple-A, and 30 with double-A ratings.

Three other points may help explain why Moody's acted as it did. First, the Federal Deposit Insurance Corp.'s assistance last year in response to two near-failures in Oklahoma showed that the government would no longer bail out a holding company, as it did with Continental Illinois Corp. in 1984. Second, the rating agencies were almost certainly embarrassed by their misperception of — or laggard response to — the Continental Illinois situation.

And third, we should never forget that the major rating agencies are far from bloodless Olympians hurling abstract thunderbolts from above the clouds. The two are locked in mortal combat for leadership image and, like any business, for revenue. This, in turn, can breed career opportunism, with consequent risks of overstatement and conflict of interest.

Some Justified

I find no problem with two large aspects of the Moody's downgrades. First, some of them were probably justified, not because the economic reality behind financial services has recently changed, but simply because the previous ratings were still too high in relation to that reality. This "catch-up" effort should have led Moody's, in my opinion, to implement a pattern of minor downgrades such as S&P followed in its early February announcement.

Nor do I have a problem with Moody's relative assessment of the money center group. With some minor exceptions, I believe the agency is fair in its relative judgment of creditworthiness.

So where's the beef? If the pattern of continuing downgrades is justified to some degree, and if these are more or less applied as deserved, does not mere heavy-handedness become just a cosmetic question? On the contrary, I will single out four substantial issues to support my opinion that Moody's has acted unaccountably, and in a manner that cries out for public review.

- The dramatic and unprecedented severity of the money center downgrades falsely suggests that the economy has recently deteriorated, or is about to do so. The dramatic high points: J.P. Morgan & Co., the last domestic bank holding company with an Aaa rating, went to Aa. Bankers Trust New York Corp. lost its Aa as its new chief executive officer, Charles Sanford, was declaring that the company deserved to be rated Aaa. Several bank holding companies sank to Baa status, which the market insists on viewing as below investment grade (despite rating agency disclaimers to the contrary). The commercial paper of Manufacturers Hanover Corp. dropped to a potentially damaging Prime-3. Furthermore, several of the downgrades did not occur in the customary small increments, but skipped intermediate steps as to suggest some emerging crisis.

The question here is whether these stunning falls from grace are merited either by new environmental shifts as uniquely perceived by the Moody's analysts (e.g., Third World borrower deterioration), or by fundamental deterioration at the companies in question (recall that rating agency analysts are technically "insiders" and are privy to nonpublic information).

If neither, then the dramatic severity of the downgrades — viewed singly or as a composite — sends an alarming but false signal of new weakness. Signals like this can cause damage around the world at the hands of those who have no reason to understand the fine points of the rating agency tea ceremony.

- The unadjusted continuation of much higher credit ratings on a large group of foreign banks falsely implies some new and special weakness at the U.S. money centers. Maybe Moody's does believe that the foreign-owned international banks are relatively that much stronger than our own. Or perhaps a Moody's apocalyptic world view is just beginning to unfold, and the foreign banks are next. In any case, the immediate damage is to the worldwide image and funding power of the U.S.-owned international banks, and this can be real.

A broader question here has to do with cross-group relative standing, always a thorny challenge to a multi-industry rating agency. Somehow all the ratings have to make sense — certainly they are willy-nilly interpreted as making sense — across all industries and within entire industries. Thus a Citicorp "A" from Moody's should be comparable in credit quality to a Federal Paper Board "A", a Merrill Lynch & Co. "A", and a Huntington Bankshares "A". An "A" must also indicate greater strength than some "Baa" chemical manufacturer, and less strength than a Credit Suisse "Aaa". Absurd as these equivalences may be, one cannot ignore their power.

In the pursuit of an elusive common standard by which to judge all industries and all companies, the rating agencies seem to have decided that the median U.S. money center bank holding company rating is "A", whereas the median foreign bank rating is "Aa". Are these differences real, or are they the product of an eccentric world view, a dogmatic analytic methodology, or some unconscious initiative rooted in other factors?

- The J.P. Morgan downgrade to "Aa" where the lead bank was reaffirmed as a "Aaa" smacks of a doctrinaire Moody's reversion to an ancient prejudice against the U.S. bank holding company. True, a bank holding company parent lacks the cash flow resources of an operating bank. In an overall weak situation, the credit rating of a bank holding company should be a good deal lower than that of an underlying bank. In Morgan's case, however, Moody's reaffirms Morgan Guaranty Trust Company of New York as "Aaa"! This must mean that the dividend to the parent is foreseeably secure. The parent, meanwhile, has deliberately avoided double leverage — which can at times strain bank dividends — and it has deliberately built a book of financial assets that constitutes a huge liquidity cushion. The Morgan parent, in fact, is as close to beatitude as any bank holding company is likely to get, so this rating is bad news to other sound holding companies — U.S.-owned, that is. In my opinion, the Moody's prejudice has always been unreasonable, and may now, since Oklahoma, be out of control.

The holding company problem, of course, is also a leading cause of the rating gap between foreign and U.S. international banks. Since the typical offshore holding company, where it exists, is usually an operating bank as well, the cash flow constraint is not

Roslyn B. Payne on her resignation as president and chief operating officer of the Federal Asset Disposition Association. [Page 3]

An American Banker Survey

Citibank Maintains Its Lead As Top Bank Credit Card Issuer

By MIKE WEINSTEIN

First of a Series

For two years in a row, Citibank and Bank of America have ranked as the first and second biggest issuers of bank cards, according to the *American Banker's* second annual survey.

Among the top card-issuing banking companies, there were only minor changes from a year earlier.

Marine Midland Bank, Buffalo, and Maryland Bank, Newark, Del., picked up a little ground, while Wells Fargo Bank and Chemical Bank slipped a bit.

But three banks that had ranked high in the first survey — Chase Manhattan Bank, First National Bank of Chicago, and Bank One of Columbus, Ohio — declined to participate in this survey.

Although Maryland Bank moved up only a few notches, accounts increased almost 50%, from about 1.2 million to about 1.8 million. Bruce L. Hammonds, executive vice president at Maryland Bank, attributed the growth to "the acquiring of new accounts, primarily through affinity group marketing."

Top 5 Card Issuers

Of those responding to survey; credit card accounts on 12/31/86 (millions)

Random Thoughts

By SANFORD ROSE

Discussants of bank acquisition strategy sometimes employ rather colorful nomenclature. First Manhattan Consulting Group regaled us some years back with poultry and bird-life images. Thus players in the acquisition game were variously characterized as turkeys, vultures, dead ducks, and eagles

Now along comes the MAC Group with some fish and sea-life allusions that, it feels, more appropriately describe the current environment. Three new sets of bank competitors are said to be emerging from the cauldron of Oct. 19. These include whales, sharks, and dolphins.

Characterized by large asset size, deficient ratios of market value to book value, and profitability and LDC problems, the whales must intensify their efforts to restructure. Yet the very need to restructure may render a large number of the whales for the first time vulnerable to takeover from other market players.

The whales had weak pre-crash market-to-book ratios, and the

Court Stalls New Powers For Banks

Securities Units on Hold For at Least 3 Months

By JED HOROWITZ

NEW YORK — An eleventh-hour ruling by an appeals court on Monday indefinitely halted plans by several banking companies to exercise new securities powers today.

The decision by the U.S. Court of Appeals for the Second Circuit in New York will delay launch of the new activities for a minimum of three months, bank attorneys said. It also could drive some banks to consider more radical approaches to investment banking, such as dropping their membership in the Federal Reserve Board in order to operate under more liberal guidelines.

The court postponed lifting a stay that would have permitted 11 bank companies to launch new securities activities through subsidiaries. These activities include underwriting and dealing in commercial paper, municipal revenue bonds, and securities backed by mortgages and consumer loans. Several of the banks were poised to launch the activities today, when a one-year congressional moratorium on new powers for banks expires.

The New York court on Feb. 8 upheld a Federal Reserve decision that authorized bank companies to conduct the new securities activities through nonbank subsidiaries. But to implement its decision, the court had to issue a "mandate" lifting a stay it imposed last May when the Securities Industry Association challenged the Fed decision. On Monday, it agreed to delay issuing the mandate until March 15, giving the securities trade group time to ask the Supreme Court to review the

Citibank Remains No. 1 Issuer of Bank Credit Cards

➺ Continued from Page 1

Maryland Bank is a leader in affinity group marketing, which bankers expect to be the best source of new accounts in 1988, according to the *American Banker*'s survey.

An affinity group program enables a bank to market credit cards to consumers with a common bond, such as the same alma mater, professional association, or frequent-flier group. The sponsoring organization typically endorses the bank's card in return for some financial compensation from the bank based on members' acceptance or use of the card.

At other top card-issuing banks, growth was more modest, with the percentage increase in accounts ranging from single digits to the low teens.

Last June, the *American Banker* mailed 110 questionnaires to the nation's biggest financial institutions and top credit card banks. Sixty responses were received by mail or by telephone in the next several months. The data reflect results as of yearend 1986.

The proliferation of credit cards from 1983 to 1985 has made it more difficult for banks to find new, creditworthy accounts.

"You see some growth in accounts because of [home] equity lines," said Jerry D. Craft, senior vice president at First National Bank of Atlanta.

Many banks have begun offering credit cards as a way for consumers to gain access to their home equity lines of credit, which are basically second mortgages in the form of a revolving credit line.

Mr. Craft also detects a squeeze on medium-size card issuers.

"I think the bigger banks are growing faster than the industry as a whole," he said. And newcomers to the business, such as thrifts and credit unions, are pressuring the midsize banks from below.

"The big get bigger, and you also have new, smaller players," Mr. Craft said.

Next: Bankers pin their hopes on affinity-card marketing.

Dodd and Heinz Propose Bill Closing Insurance Loopholes

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Two influential Senate Banking Committee members today plan to offer a measure to close many of the loopholes that have permitted banks to offer insurance products. The measure would exempt or "grandfather" existing activities.

Committee staffers and other observers have predicted a close vote on the measure, which will be sponsored by Sen. Christopher Dodd, D-Conn., and Sen. John Heinz, R-Pa. The two senators will attempt to add it to the omnibus banking bill during votes scheduled to begin today, an aide to Mr. Dodd said.

Until now, there has been considerable speculation about Mr. Dodd's plans. Many observers have predicted he might not offer the measure.

Opponents of the Dodd-Heinz measure have called it a "killer amendment." Senate Banking Committee Chairman William Proxmire and Sen. Jake Garn, the committee's ranking Republican, are said to be willing to vote against their own bill if the amendment is attatched.

The American Bankers Association, which strongly supports the repeal of the Glass-Steagall Act, has vowed to fight any bill that includes restrictive insurance measures.

The measure Mr. Dodd and Mr. Heinz will offer this week would close the South Dakota loophole, which permits banks to market insurance nationwide through subsidiaries in that state.

It would overturn a ruling by the Comptroller of the Currency that authorized banks to market insurance statewide through offices in towns with fewer that 5,000 people. It would also forbid the transfer of grandfathered insurance rights in bank mergers.

An exemption that permits banks with less than $50 million in assets to offer some insurance products would be expanded to include banks with less than $65 million in assets.

> The measure would close the South Dakota loophole, which permits banks to market insurance nationwide through subsidiaries in that state.

Mr. Dodd may also offer a substitute for the Glass-Steagall repeal measure being pressed by Mr. Proxmire and Mr. Garn, the Dodd staffer said. The Dodd measure would permit banks to underwrite a number of new securities now, and it would mandate votes on corporate debt and equity underwriting in later years.

The measure is similar to one Sen. Donald Riegle, D-Mich., told committee Democrats he plans to push. Mr. Riegle and Mr. Dodd are still discussing which approach to back, the Dodd staffer said.

Sources are predicting a close vote on efforts to substitute a measure for Mr. Proxmire's Glass-Steagall repeal provision. Many of the same people believe that if Mr. Proxmire prevails on that key issue, the entire multititle bill will be reported out of committee by a substantial margin. ■

Correction

Consumers Union supports a measure that would prevent banks and other lenders from changing the terms of a home equity loan once a credit line is opened for a customer.

Without such a provision, said Michelle Meier, the organization's government affairs counsel, the enhanced disclosure sought in a bill pending before the House Banking Committee would become meaningless. Consumers Union's position was misrepresented in a story, "Progress Expected on Home Equity Disclosure Bill," Feb. 24, page 16. ■

RANDOM THOUGHTS

➸ Continued from Page 1

crash simply exacerbated this weakness. Those banks with the lowest pre-crash ratios suffered the largest absolute declines in market value and also the greatest slippages in value relative to the S&P 500.

Thus such well-known leviathans as Manny Hanny and Chase Manhattan, whose pre-crash ratios hovered around unity, experienced a 44% decline in market worth and a 21% slide vis a vis the S&P 500 from the end of September 1987 to yearend. By contrast, banks like First Wachovia, First Union, and PNC, which sported pre-crash ratios of 1.6 to 1.8, saw absolute market values decline by less than 20% during this period. And relative to the general market, valuation actually improved by a modest 4% to 5%.

By yearend 1987, many of the whales were sitting with stock prices that were once again only 50% to 80% of book values. Some people view these subnormal ratios as a retrenchment signal from the marketplace. After all, why expand, via new equity or retained earnings, when the process destroys value by converting dollar bills into 50-cent pieces?

While that may or may not be its signal to the whales, the marketplace clearly has a different message for a group of banks that are dubbed sharks by the MAC Group. These institutions were bruised but not battered by the events of last October. Such banks — e.g., Banc One, Wells Fargo, Fleet, SunTrust, as well as PNC, First Union, and First Wachovia — retain market-to-book ratios much in excess of unity.

They are thus apparently being encouraged to grow. And since their relative purchasing power has increased not diminished since the crash, their appetite for acquisition may actually have been whetted, though there is the ever-present danger of a feeding frenzy that could lead to self-immolation.

The sharks, in the MAC Group's taxonomy, have both superior market-to-book ratios and a market capitalization in excess of $2 billion. The third class of banks, the dolphins, have ratios in excess of unity but market capitalization of less than $2 billion. These include institutions like CoreStates, MNC, NBD, Midlantic, etc.

The dolphins face both opportunities and risk. Some will grow rapidly enough to qualify as sharks, while others will be taken over by the larger, more ambitious predators. Thus, as a group, the dolphins, ventures the MAC Group, may not long endure.

□ □ □

The whales are not only plagued by the effects of the crash but also by the new federal capital guidelines, with which they are not currently in compliance. Even before the crash, many whales would have found it difficult to raise the required equity. Post-crash, the task is much more arduous. And, as noted, some would suggest that the whales not even try, given their depressed market-to-book ratios.

Whether they should try or not depends on the reasons for the depressed ratio, which may vary from bank to bank. It may be that the market-to-book ratio is low because book value is perceived as fictitious. It may also be that the ratio is low because the marketplace is skeptical of the capacity of a bank to invest new equity in businesses that will earn the threshold rate of return — about 14% or 15% after tax.

If the former is generally the case, the whales, most of which are money center banks, should not be reluctant to try raising the necessary capital. Many banks will not raise equity at less than book value because of the dilutive effects. But if market-to-book ratios are below one because book value is overstated, the raising of new equity, while dilutive in an accounting sense, is not necessarily dilutive in a true economic sense.

If, at the margin, banking is competitively profitable — that is, new equity can be invested in businesses that will fetch rates of return of at least 14% — then the shareholder may be well served if management seeks the new financing.

Suppose, however, that bank profitability has declined so much that most of the whales cannot garner a return on equity from incremental businesses that is large enough to support a future market-to-book ratio of unity or better. Then, quite logically, the whales should retrench, downsizing perhaps to dolphin-like proportions. To attempt to raise equity in these circumstances would indeed be dilutive, in economic as well as accounting terms.

But downsizing carries another risk — that of being taken over as a result of having a lower overall market capitalization. That is why, in this new environment of interstate banking and pinched profitability, the MAC Group identifies most of the whales as potentially vulnerable to acquisition.

Many whales will attempt to downsize, and while they are rebuilding their shrunken business bases on sounder foundations will fall prey, in whole or in part, to the blandishments of the more aggressive sharks — the high-flying superregionals. If, on the other hand, the whales attempt to remain behemoths by raising equity for investment in businesses that do not meet the necessary profit objectives, they will massively dilute their equity, risking shareholder revolt. In either of these scenarios — downsizing or imprudent investment — many more takeovers and takeover attempts can be anticipated.

□ □ □

Sometimes overlooked in the current discussions is the potential impact of the federal capital guidelines and the post-crash market weakness of the whales on the status of the foreign banks. While the money center banks are capital deficient and have low market-to-book and price-earnings ratios, many foreign banks enjoy much greater market acceptance. They can raise equity (first-tier capital) at a much lower cost than can the whales. Will they not use this advantage to stake out an even greater presence in the U.S. marketplace?

Consider the contingent-liability business. Some money center banks have made most of their profits from high-grade commercial customers by selling liquidity-insurance products. This business was considered desirable only because of the absence of capital requirements. Since the proposed regulations mandate a hefty capital charge for liquidity products (including the same charge for financial standby letters of credit as for corporate loans), the business is now viewed as something less than desirable.

Some banks that will be in a substantial capital-deficient first-tier position by 1992 have probably considered brokering letters of credit to superregionals that will find themselves in a capital-surplus position. That is, the money center bank will book the business, take a small fee, and then pass the obligation to perform, should performance be required, downstream to the capital-rich superregional.

Yet one wonders whether the ultimate customer will agree to this arrangement. The superregionals, despite their manifest success and growing market power, are not terribly well known.

Would not the customer be generally more comfortable if the obligation to perform rested with a huge foreign bank rather than with a comparatively unknown regional institution? Hence there is a good likelihood that the bulk of the contingent-liability business will pass, for good or ill, from the money center institutions to foreign entities, if that has not already happened.

Additionally, faced with the requirement to lift capital-asset ratios, the money center banks should redouble their efforts to sell loans. Currently the foreign banks buy perhaps as much as 40% to 50% of the offerings of the money center institutions. In the future, they may be in the market for an even larger proportion.

The foreign banks view this activity in part as a unique opportunity to get hold of the financials of a large number of U.S. companies. Armed with data on an even broader array of borrowers, they can eventually try undercutting the loan originators in order to get first crack at the customer's business.

Thus, the unhappy confluence of post-crash market weakness and regulatory insistence on much more generous capital backing both for on-balance-sheet and off-balance-sheet commitments may work to greatly enlarge the foreign bank presence in the U.S.

If this occurs, it will underscore the problems created by trying to address the question of international capital adequacy without simultaneously eliminating the inequality of business opportunities. Can anyone doubt that it is the ability of foreign banks to participate in high-value businesses from which U.S. entities are excluded that is in no small measure responsible for their superior market acceptance and resultant access to lower-cost capital? ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reasons of space and clarity.

Remember, we need your views to be a true community newspaper.

TECHNOLOGY

Automated banking will become more convenient for Chicago-area residents as the two dominant ATM networks in Illinois combine after nearly a year of delays. The Cash Station and Money Network organizations actually merged in January 1987. ______ 6

Increased efficiency in the automated clearing house may be achieved by shifting emphasis from exotic applications to proven uses, writes Bruce J. Summers, senior vice president at the Federal Reserve Bank of Richmond. ______ 8

INSIDE

Comerica Inc. said it will purchase Grand Bancshares, Dallas, in what is believed to be the first acquisition by a Midwest banking company outside the region. With its Texas addition, Comerica of Detroit is expected to emerge as the latest super-regional bank holding company in the Midwest. Grand Bancshares owns three banks, with total assets of $460 million; Comerica has assets of $9.8 billion. ______ 2

Independence Bancorp is considering legal action against Drexel Burnham Lambert Inc., claiming that $104 million in bonds purchased from the underwriter were not worth the price. The Pennsylvania bank holding company says the bonds were bought at a par value of about $104 million, which its auditors estimate is $5.2 million above the fair market value. ______ 2

Irving Bank Corp. will have to repair strained relations with some of its largest shareholders if it is to win a proxy contest with the Bank of New York Co., which has been trying to acquire Irving since last September. ______ 2

Wells Fargo Bank of California broke the silence surrounding bidding on Mexico's debt-for-bond swap by announcing it had tendered $80 million of its $604 million Mexican loan portfolio. Officials said the bank had tendered $30 million of its Mexican loans at a price of 70-to-75 cents on the dollar and $50 million of loans for 79.5 cents on the dollar. ______ 3

An American Banker Survey

Banks Look to Affinity Groups for Card Growth

By MICHAEL WEINSTEIN

Second of a Series

Affinity-group marketing is expected to be the best source for new credit card accounts this year, according to the *American Banker's* second annual credit card survey.

That marketing technique has already been heavily used by a number of banks for the last few years.

As the credit card market has become increasingly saturated, bankers in recent years have been looking for new ways to increase their business. Other marketing techniques cited in the survey include direct mail, cross-selling to existing customers, and advertising in bank branches, merchant locations, or newspapers.

An affinity-group program enables a bank to market credit cards to a group of consumers who have a common bond, such as the same alma mater, the same professional association, or the same frequent-flyer group. The sponsoring organization typically endorses the bank's card in return for financial compensation from the bank based on members' acceptance or use of the affinity card.

Last June, the *American Banker* mailed about 110 questionnaires to the nation's biggest financial institutions and top credit card banks. Sixty responses were received by mail or by telephone in the next several months.

When asked to pick the best source of new accounts in the upcoming year, from a list of several marketing techniques, 25 out of 60 bank — or 42% of the survey respondents — chose affini-

Booming Suburbs of Washington Teem With New Banks Touting Personal Touch

By BILL ATKINSON

WASHINGTON — Kenneth L. Crovo, president and chief executive officer of Bank of Loudoun, was riding high last September when his startup bank raised $5 million in a month through an initial stock offering.

"I was really amazed," said Mr. Crovo, whose bank is based in Leesburg, Va., about 35 miles west of Washington. "I think it is a real endorsement of the profitability of these small banks."

Bank of Loudoun is just one of many small business banks to pop up in the Washington metropolitan area.

In the last six years, six new banks have opened in Washington, according to the Federal Deposit Insurance Corp. During the same time, 14 banks opened in Maryland and 34 opened in Virginia.

And there is little sign of a slowdown. As of January, Bank of the Potomac, based in Herndon, Va., had raised $6.5 million in just three months. It expects to open by midyear.

According to the Office of the Comptroller of the Currency, 10 applications were filed for national bank charters in Washington and surround-

Software Vendor Charges Rival 'Stole' Customer

By DAVID O. TYSON

NEW YORK — In a suit that may affect relations between banks and software vendors, one software company is charging a competitor with stealing a banking customer and gaining access to programming trade secrets.

The 14-month-old federal case, which has had no publicity, is an extreme action to cope with a problem that comes up when a new vendor installs a system in a bank: how to protect

COMMENT

Should Banks Acquire Healthy Thrifts? The Heat Is on the Fed

By JOHN D. HAWKE JR.

ANYONE WHO BELIEVES that being a member of the Federal Reserve Board is good for the digestion should take a look at the responses the board has received to its request for comment on whether it should permit bank holding companies to acquire healthy thrift institutions.

The Fed's invitation precipitated submissions from more than 200 commentators, ranging from a woman in the Pacific Northwest who dismissed the idea as "extremely nauseating" and "utterly disastrous," to the chairmen of the Senate and House Banking committees, each of whom made clear they thought the issue should be left to Congress. So great was the interest in the proposal that a finance professor at Bentley College in Massachusetts assigned his financial intermediation students as homework the task of preparing and submitting their own comments.

Probably the most important comments on the proposal came from within the government. The Federal Home Loan Bank Board, concerned that if banking organizations were permitted to acquire healthy thrifts they might not become bidders on failing thrifts, urged the Fed to approve such acquisitions only where the bank holding company agreed also to acquire one or more failing S&Ls. It supported such acquisitions on a nationwide basis — that is, without regard to geographic limits on the acquisition of banks; it urged the board to eliminate the "tandem operations" restrictions imposed on holding companies that have been allowed to acquire failing thrifts; and it argued that acquired thrifts should be permitted to exercise all of the powers available to thrifts not otherwise affiliated with banks.

There is no factual or logical basis for assuming that if a bank holding company is permitted to acquire a healthy thrift, its lust will be so sated that it will not be interested in bidding on FSLIC problem cases.

—John D. Hawke Jr.

Legislative Storm?

The thunder that rolled down from Capitol Hill, however, presaged a legislative storm. House Banking Committee Chairman Fernand St Germain, D-R.I., joined by the ranking minority member of the committee, Rep. Chalmers P. Wylie, R-Ohio, lectured that the Fed's proposal "would unnecessarily hamper" the Bank Board's efforts to resolve the problems of troubled thrifts, that it "is for Congress to make fundamental decisions of this nature, and that "any action by the Federal Reserve Board at this time would be totally unwarranted." Senate Banking Committee Chairman William Proxmire, D-Wis., and Rep. Frank Annunzio, D-Ill., voiced similar objections.

Most of the major banking trade associations generally favored the proposal, although a split emerged among bankers with respect to geographic limits on expansion through thrifts. The American Bankers Association, together with state associations in Florida, Connecticut, California, Tennessee, and Virginia, urged the Fed to "Douglasize" thrift acquisitions — that is, to permit the acquisition of healthy thrifts only in states in which the bank holding company could acquire a bank, under the constraints of the Douglas Amendment. Others urged that nationwide acquisitions be permitted.

Not surprisingly, the Independent Bankers Association, a leader in the fight against geographic expansion through nonbank banks, urged the Fed to retain its D.H. Baldwin rule, under which bank holding companies have been permitted only to acquire failing thrifts.

A divergence of views also emerged in the thrift industry. The U.S. League of Savings Institutions, together with the Council of Mutual Savings Institutions and a number of state leagues, vehemently opposed any change in the D.H. Baldwin rule. In contrast, the National Council of Savings Institutions supported the proposal, on the condition that the Fed "Douglasize" thrift acquisitions. The Association of Thrift Holding Companies gave unconditional support.

Finally, there were a few comments from outside the financial institutions industry. The Independent Insurance Agents of America, who have spent the better part of two decades successfully keeping bank holding companies from expanding their insurance activities, cautioned that acquired thrifts had to be subject to the same activity limits as would otherwise be applicable to bank holding companies. The National Association of Home Builders, also expressing support for activity and geographic limits, endorsed the proposal provided that steps were taken to assure that acquired thrifts would maintain their basic character as home mortgage lenders.

Key Issues

Several key issues emerge from this cascade of opinions:

• **Should the Fed Impose Geographic Limits?** Clearly, the issue of "Douglasizing" thrift acquisitions is politically sensitive for the Fed. But the very rationale offered for doing so — to prevent bank holding companies from acquiring thrifts where they cannot acquire banks — should compel the Fed to reject geographic limits. Banking organizations are likely to be willing to pay for the opportunity to enter new markets otherwise foreclosed to them, by infusing new capital into the thrift industry.

Moreover, thrifts insured by the Federal Savings and Loan Insurance Corp. have been defined by Congress itself not to be "banks" and are therefore not covered by the Douglas Amendment. It is thus difficult to see how a sustainable legal rationale for "Douglasizing" thrift acquisitions could be fashioned.

• **Should the Fed Impose Activity Limits?** As with interstate expansion, an important part of motivation for banking organizations to acquire thrifts is the prospect of obtaining expanded powers. While the Fed has suggested that it may be compelled by law to apply the restrictions of section 4(c)(8) of the Bank Holding Company Act to the various activities of thrifts acquired by bank holding companies, it is far from clear that the law dictates such a conclusion. The board might, for example, simply define the "activity" involved as engaging in the business of operating a federally regulated thrift institution — an activity that is, after all, defined and circumscribed by a network of federal laws and regulations, and supervised by another federal agency.

As a practical matter, however, the Fed is unlikely to adopt such an approach — despite the Bank Board's urgings that it do so to enhance the marketability of thrifts. If for no other reason, the long-standing concern at the Fed about the dangers of real estate activities — activities that have contributed substantially to the depressed condition of the thrift industry — are likely to deter it.

• **Should the Fed Require "Packaging" of Healthy and Sick Thrifts?** One certainly must sympathize with the Bank Board's motivations in urging that healthy thrifts be "packaged" with basket cases, but the underlying rationale for packaging must be viewed not only as illogical and inequitable, but counterproductive.

There is no factual or logical basis for assuming that if a bank holding company is permitted to acquire a healthy thrift, its lust will be so sated that it will not be interested in bidding on FSLIC problem cases. Certainly no such assumption has worked with respect to existing savings and loan holding companies that own healthy thrifts and do not own banks. Indeed, these are precisely the companies have been the most frequent bidders on failing thrifts. The fact that they already own healthy institutions does not seem to have dampened their ardor.

Nor has such an assumption worked with respect to prospective thrift acquirers that own neither a bank or an S&L. The Bank Board has routinely permitted the formation of new thrift holding companies through the acquisition of healthy thrifts without worrying about the acquirers' motivations to participate in future auctions of failing thrifts.

One could reasonably expect that once a banking organization has a foothold in the S&L business it will have the same incentive as any other thrift owner to bid on problem takeovers. Mandatory packaging would amount to no more than a requirement that one special class of acquirers — bank holding companies — pay a governmentally dictated premium in order to acquire healthy thrifts. As such it would not only create an unfair and unreasonable distinction among thrift acquirers, but by increasing the costs of healthy thrift acquisitions would undoubtedly serve to diminish the interest of banking organizations in acquiring any thrifts.

• **Should the Fed Require Maintenance of FSLIC Insurance?** One fear voiced by many commentators on the Fed proposal is that bank holding companies acquiring healthy thrifts would be likely to convert the thrifts to banks insured by the Federal Deposit Insurance Corp. at the earliest opportunity, to escape the higher premiums assessed by the FSLIC. Such a result, it is argued, would undermine the FSLIC recapitalization plan enacted by Congress last year, which depends on a continued flow of premiums to service the recapitalization debt. Thus, it has been suggested that such acquisitions be conditioned on maintenance of FSLIC insurance for some specified period.

Because of the Douglas Amendment, of course, the Fed probably would not sanction a charter "flip" in any event if the bank holding company acquired the thrift at a location where it could not acquire a bank. More importantly, Congress signals its acquiescence to charter flips by failing to extend that moratorium, it would hardly seem appropriate for the Fed on its own to preclude such exit solely for thrifts acquired by bank holding companies.

• **Should the Fed Act at All?** There is no doubt whatsoever about the Fed's legal authority to permit the acquisition of healthy thrifts. Nor is there any question that it could make supportable findings that satisfy the standards of section 4(c)(8). The real question is whether the Fed is willing to take the political heat that will be generated if it abandons or modifies the D.H. Baldwin rule.

The Fed has always prized its independence within the government, and preservation of that independence unquestionably depends upon its prudent exercise. But Congress has entrusted the Fed with the administration of the Bank Holding Company Act. Some

New Banks Spring Up Throughout Washington Area

Continued from Page 1

ing suburban areas in 1987. Nine of the applications have been approved.

Much of this growth is centered in the rapidly growing Maryland and Virginia suburbs.

"In the past, you have had a small bank here and a small bank there, but this particular rash is unusual," said Lewis Sosnowik, a bank analyst for Koonce Securities Inc., Rockville, Md.

While the small banks don't offer as many services as larger institutions, banks like Mr. Crovo's are cherry picking customers from larger banks by touting personalized, friendly service and a quick turnaround on loans.

So far, the philosophy seems to be working.

Springfield, Va.-based Hallmark Bank & Trust Co.'s assets soared to $49.2 million at yearend, up from $28.7 million at the end of 1986. The bank posted net income for 1987 of $342,000, up from $318,000 the previous year.

Likewise, two-year-old Fairfax Bank & Trust Co., Fairfax, Va., has been growing at a steady clip. For the year that ended Dec. 31, its assets spurted to $48.5 million, up 32.2% from the date on 1986. Loans grew to $33 million, up from $17 million the previous year, and the bank had net income of $513,000, up from $224,000.

"Our goal is to serve our customer as best we can," said Charles Curtis, Fairfax Bank's president and chief executive officer. "If we can continue to do that, we will have good growth and good earnings."

Meanwhile, Security Bank Corp., Manassas, Va., is taking on larger regional powers like Sovran Bank and Signet Bank. Manassas' population is only 20,000, but Security Bank president J. William Garry saw enough room for a community bank.

The competition has not been a problem, Mr. Garry said. "Our dollar bill is as green as anybody's dollar bill."

Although the 19-month-old bank posted a $43,000 loss for the year due to startup costs, assets reached $20.4 million on Dec. 31, up from $10.3 million at the end of 1986.

Executives of some larger institutions are not threatened by the rash of small banks. The larger banks that are based in Washington or that have significant branches in the city say they process loans just as quickly and on location.

"We haven't felt the pinch from the small community banks," said David Palombi, a spokesman for Riggs National Bank of Washington. "Some of the small banks like to spread the idea that being big is bad. That is a misconception."

The dramatic growth in small banks reflects the growth in Washington's suburbs. In the area known as the Baltimore-Washington Common Market, the population is 5.9 million, ranking fourth among the nation's largest urban markets. The area's population was 5.4 million in early 1982. As the number of residents has increased, so have bank deposits and the need for more banking services.

In neighboring Montgomery County, Md., which is considered a suburb of Washington, total deposits had grown to $4.5 billion as of March 31, 1987, up from about $2.8 billion four years earlier, according to Sheshunoff & Co., an Austin, Tex.-based bank consulting firm. Similarly, in Fairfax County, Va., total deposits were $4.9 billion on March 31, 1987, up from about $3 billion in 1983.

"Economic growth in the Washington area has been steady but rapid," said Sidney A. Bailey, Virginia's commissioner of financial institutions. "Economic growth brings with it the need for financial services."

Executives of small banks also contend that customers of big banks are dissatisfied with service, which has opened the door for community banks.

The Personal Touch

"People tend to prefer banking relationships on some personal basis," Mr. Bailey said. "They like to believe they know their banker and can rely on his advice."

The smaller institutions also argue that the larger banks concentrate on big loans, leaving a gap for small banks.

"The issue is that small banks deal in loan sizes from $250,000 to $700,000. They are the nuisance type of loans to the larger banks," said Michael A. Sullivan, president of McLean, Va.-based Bank 2000.

Organized in 1985, Bank 2000 is gearing for growth. The $44 million-asset bank had net income of $256,889 in 1987, compared with a loss of $242,059 the previous year.

Meanwhile, its holding company, Bancshares 2000 Inc., has raised about $5 million to start a second independent community bank 10 miles away in Reston, Va. The Bank 2000 in Reston is expected to open in March.

In Montgomery County, the increase in the number of small new banks follows a period of consolidation, said Wilmer L. Tinley, president of Bethesda-based Montgomery National Bank, which opened in June.

At one time, there were 11 independent banks in the county, Mr. Tinley said. Now there are four. "We felt there was a viable market because of the lack of small institutions in Montgomery County," Mr. Tinley said.

Mr. Sosnowik of Koonce Securities' says the small institutions are simply nursed to profitability and then put up for sale to larger banks that want a foothold in the market.

In recent years, executives of small banks have sold their operations at three times their book value.

"These banks are not being founded over lunch at McDonald's," Mr. Sosnowik said. "People who have founded these banks 14 years ago [and have sold them] are trying to do it again."

Mr. Tinley says he is not out for a quick profit but intends to manage the Montgomery National Bank for the long term.

Appeal to Large Banks

Large banks are attracted to the community institutions because, rather than opening a new branch, they can buy the small bank and have a ready made base of deposits, assets, and loans.

One concern among executives at small institutions is that more and more small banks will continue to sprout up. If they are not acquired by larger institutions, the market will become saturated.

Bank 2000's Mr. Sullivan says the small banks will cannibalize each other's customer base.

"You will see them grow for four to six years and peak out," he said. "Then you will see a number of them just sit there." ■

An American Banker Survey

Banks Look to Affinity Groups For Credit Card Growth in '88

Continued from Page 1

ty-group marketing.

Affinity-group programs "seem to be the hot button this year and next year," said K. David Elgena, president of First City Bank-Sioux Falls, South Dakota, a subsidiary of First City Bancorporation of Texas Inc., Houston.

Maryland Bank NA, Newark, Del., a leader in affinity-group marketing, continues to get good results from that technique. The number of accounts at Maryland Bank jumped about 45% in 1986 and 50% last year, mainly because of affinity-group programs, said Bruce L. Hammonds, executive vice president at Maryland Bank.

"I think [banks] will become more sophisticated in marketing in general," said Randolph W. Wyckoff, executive vice president at Signet Bank, Richmond, Va.

But some industry observers questioned how effective affinity-group marketing will be.

"I'm concerned about the potential for affinity marketing over the next year," said Joel P. Friedman, director of strategic management at Arthur Andersen & Co., San Francisco.

Some industry observers compared the declining efficiency of affinity-group marketing to the same trend in direct-mail marketing.

Direct mail was a favorite marketing technique for several years. It was ranked as the most effective method for attracting new accounts last year, according to the survey.

But as more banks jumped on the direct-mail bandwagon, it became increasingly difficult to attract new, creditworthy accounts. "Direct mail has just not been pulling like it has in the past," Mr. Elgena said.

But at the same time, warned Mr. Friedman, "The affinity group has become extremely cluttered."

Researchers estimate that about 6% of the 250 million MasterCard and Visa cards in the United States, or 12 million to 15 million cards, have already been issued as part of affinity-group programs.

Banks Look to the Affinity Groups for Card Growth

Continued from Page 14

Mr. Friedman said banks should devote more effort to marketing cards to their own customers and persuading existing cardholders to increase their balances.

"The banks spend very little marketing to their own customers," he said. "The cross-sell is deserving of more attention."

The *American Banker* survey found that bankers ranked cross-selling a distant third as the expected best source for new accounts in 1988.

The newspaper's survey also asked banks about their credit card enhancements. Enhancements are extra features, such as insurance products, various emergency services, or discounts at stores, that are included as part of the bank's credit card offering to make it more attractive to consumers.

Most Common Enhancements

According to the *American Banker* survey, the most common enhancements now offered with standard cards are access to the card account by check, access by automated teller machine, and insurance for injury or death while traveling.

The survey found that the most common enhancements on premium cards are those for standard cards plus credit card registration, in which the provider agrees to notify all the customers' credit card issuers if his or her cards are stolen.

Bankers ranked ATM and check access as the most effective enhancements for attracting customers to their cards.

AN **American Banker** SURVEY

"The ATM access is a very strong feature," said Henry Silver, a vice president at Wells Fargo Bank, San Francisco. He said it is especially useful with the proliferation of shared teller machine networks, which connect ATMs in different regions and around the country.

But some industry observers question the importance of enhancements.

"If everyone has the same enhancements, you don't have any differentiation," Mr. Friedman said. "What we've ended up with enhancements that are throwaways."

A truly useful enhancement is one that is unusual and brings real value to the cardholder, he said.

"American Express was very clever. They found an enhancement that no one else was offering," said Mr. Friedman, referring to the company's buyers assurance program.

Under that program, introduced in September 1986, American Express agreed to extend the warranty coverage for products purchased with the American Express card.

"Now a lot of banks have followed suit," Mr. Friedman said. "And American Express has gone one step further," referring to a program announced in November that insures items purchased with the American Express card against theft, fire, accidental damage, or loss.

Donald J. Auriemma, a Garden City, N.Y., consultant, said that a high credit line and a reasonable interest rate are more important considerations than enhancements.

"If you don't have one of those two things, you've got a loser," he said.

Mr. Silver of Wells Fargo argued that enhancements are "important in that they permit you to be competitive," but he acknowledged that "pricing is probably more important."

According to the *American Banker* survey, the most popular enhancements planned for 1988 are legal services, discounts on travel services, and emergency medical service while traveling.

Next: One half of surveyed banks expect higher profits from the merchant side of the credit card business.

New-Account Winners

Banks rank the following techniques as the best for getting new accounts in 1987

An American Banker Survey

Merchant Units Hold Their Own

By MICHAEL WEINSTEIN

Third of a Series

Despite increasing competition in the merchant side of the credit card business, half of the banks responding to the *American Banker's* second annual credit card survey said they expect higher profits during 1988.

As more banks focus on the merchant operation as a stand-alone business, they will manage it better, which should improve profitability, bankers said in interviews. Some bankers also think that new technology will enable banks to boost profits in this business.

Twenty-two of 44 banks that track merchant profitability said they expect higher profits in 1988.

Last June, the *American Banker* mailed 110 questionnaires to the nation's biggest financial institutions and top credit card banks. Sixty responses were received by mail or by telephone in the next several months. Fifty of the respondents had merchant operations and served as the base for this part of the survey.

The merchant operation accounts for a small portion of overall credit card profits. Banks make most of their money on the card-issuing side by extending credit to consumers.

About one-half of the banks polled in

Fleet/Norstar to Pool Operations

New England Bureau

BOSTON — Fleet/Norstar Financial Group Inc. will consolidate back-office operations this year to cut costs.

During 1988, Fleet/Norstar will combine 11 operations centers into four and reduce its 11 data processing centers to one, according to J. Terrence Murray, president.

Fleet/Norstar was formed on Jan. 1, when Fleet Financial Group, Providence, R.I., merged with Norstar Bancorp, Albany, N.Y. Each company had about $12 billion in assets.

A spokesman at Fleet/Norstar's Providence office declined to elaborate on Mr. Murray's remarks, which were made at a seminar in Newport Beach, Calif., sponsored by Montgomery Securities, San Francisco.

As bank mergers have swept the country, many banks have been consolidating their back offices. This may reduce operating expenses but often causes layoffs, and it can be technically difficult because of incompatible com-

Visa Becomes Soviet Union's 1st Credit Card

Membership of Nonbank Is Unusual Feature of Deal

By YVETTE D. KANTROW

NEW YORK — Visa will become the first international payment card to be issued in the Soviet Union, thanks to an agreement signed with the Soviet state tourist organization.

The deal is unusual because it allows a nonbank organization to join Visa International as a card-issuing member.

Vao Intourist, a government agency responsible for all tourist facilities in the Soviet Union, plans to issue Visa cards both to foreign nationals who live in the Soviet Union and to Soviet citizens who travel abroad.

While Visa, American Express, and MasterCard are all accepted in areas surrounding Soviet tourist attractions, this is the first time payment cards will be available to the country's citizens, according to Fiona Wilkinson, head of marketing services for Visa International's European operations.

In applying for membership in Visa, Vao Intourist took advantage of *perestroika* — the recent relaxation in Soviet economic policy. The country is now permitting organizations that can profit from international dealings to strike agreements with nonsocialist trade partners.

Vao has established a separate division, Intourcreditcard, to manage the Soviet Visa program and help develop the computer systems necessary to process credit card transactions. It is part of the U.S.S.R. state committee for foreign travel, a government unit that owns and operates all hotels and other tourist-related establishments in the Soviet Union, Ms. Wilkinson said.

All cards issued by Vao will be guaranteed by Gosudarstvenny Bank SSSR

Volcker Joins Investment Firm

NEW YORK — Months of speculation about what Paul A. Volcker's next job would be came to an end Wednesday when Mr. Volcker said he would become chairman of the New York investment banking firm James D. Wolfensohn Inc. And earlier in the day, Princeton University had announced that the former Federal Reserve Board chairman and Princeton alumni had joined its faculty as a part-time professor of international and public affairs.

St Germain Blasts Drug Efforts

WASHINGTON — Fernand J. St Germain, chairman of the House Banking Committee, on Wednesday accused the Reagan administration of failing to conduct a comprehensive war against money laundering and drug trafficking. The Rhode Island Democrat said he was particularly distressed that the Treasury Department, without informing Congress, decided against holding an international conference on money laundering that had been mentioned to the committee in June 1987.

"I am gratified to hear the administration inveigh against money laundering and drug trafficking," Mr. St Germain said in a letter to Treasury Secretary James A. Baker 3d. "Now it is time your deeds matched your words." In a separate letter to Federal Reserve Board Chairman Alan Greenspan, Mr. St Germain wrote that the Fed "did not approach the issue of money laundering quite as seriously as the committee would have hoped and expected."

Treasury Drops Reporting Rule

WASHINGTON — The Treasury Department said it is dropping a proposal that would have forced financial institutions to record and report certain cash transactions of less than $10,000. In a Feb. 29 notice in the *Federal Register*, the Treasury Department said it received an "overwhelming" number of critical comments on the plan to detect money laundering.

Customers buying more than $3,000 worth of cashier's checks, money orders, travelers checks, or bank checks would have been required to file a report with the financial institution indicating whether more than $10,000 of such instruments had been bought in one day. The institution, in turn, would have had to submit reports based on the customer reports. Critics argued the benefits of catching possible fraud did not outweigh the tracking costs.

Hanover Trims London Staff

LONDON — Manufacturers Hanover Corp. said Wednesday that it is cutting 40 jobs in its London operation, or roughly 3.5% of its British work force. According to British press reports, the company has also halted renovations on its new London headquarters, where staff from several sites were expected to be relocated this year.

Fannie Mae Prices Remics

WASHINGTON — The Federal National Mortgage Association on Wednesday priced $425 million in real estate mortgage investment conduit securities backed by mortgages owned by American Savings and Loan Association, Stockton, Calif. American has been ordered by the Federal Home Loan Bank Board to liquidate $2.5 billion in mortgage securities in order to raise cash to pay off short-term liabilities.

Seidman: '87 Was a 'Forgettable Year' for Banks

FDIC Reports Annual Deposit Growth of 2.2%, Despite Surge in Fourth Quarter

By BARBARA A. REHM
Washington Bureau

WASHINGTON — The October stock market crash caused deposits at commercial banks to grow at an annual rate of 12% in the fourth quarter, but that growth was a dismal 2.2% over the full year, the Federal Deposit Insurance Corp. reported Wednesday.

In 1986, bank deposits rose 7.8%.

Asset growth was less than 2%, the smallest annual increase since 1948. But bank assets topped $3 trillion for the first time at yearend.

"Overall, banks had a very forgettable year," FDIC Chairman L. William Seidman told reporters, with income down nearly 80%. But barring an economic downturn, he said, 1988 bank industry profits should return to 1986 levels of about $17.5 billion. In 1987, the industry posted total earnings of $3.7 billion.

Banks' loan volume increased 4% last year. Commercial loans were down 2%, the first such decrease, while real estate and consumer lending rose. In fact, real estate loans exceeded banks' commercial loans by $10 billion last year, the FDIC said, mostly due to an increase in home equity loans.

The aggregate ratio of primary capital to assets stands at 7.69%, the FDIC reported.

The figures, published in the FDIC's *Quarterly Bank Profile*, also show that 17 of the 25 largest U.S. banks lost money in 1987. The FDIC attributed the problems of the big banks to huge reserves they made against Third World loans last year.

The FDIC report also highlighted a rebound by small banks, particularly in the Midwest.

Net operating income for U.S. banks with less than $100 million in assets jumped 51% in 1987. But in the Midwest, the increase was 77.6%. Banks with $100 million to $300 million in assets had a 28.5% increase in net operating income last year.

Recovery in the Farm Belt also has led to slower growth in the FDIC list of problem banks. There are 1,515 banks on the list, down from a high of 1,640 in mid-1987. "The problem bank list has turned around for the first time since 1981," Mr. Seidman said.

Some paring of the list is due to bank failures, but banks also have been removed from the list, said John C.

Bank of Boston Tests Market

First National Bank of Boston is preparing to sell $100 million in certificates backed by its auto loans, largely to "satisfy its curiosity about securitization." The issue is expected to come to market by Sept. 1.

The bank disclosed the offering in papers filed two weeks ago with the Securities and Exchange Commission, but the deal has gone unnoticed by market observers.

For about a year, bank officials have been speaking to Salomon Brothers Inc. — lead manager of the deal — about possible uses of asset-backed securities. Three months ago, Bank of Boston decided to go ahead with a public offering, said Tom Cahill, the bank's director for consumer finance.

"From what we've seen, securitization may be a better way to fund ourselves than branch deposits," he said. "We feel we should know more about it and we thought our [car loan] portfolio was a good prospect." Cahill expects neither a gain or loss from the issue.

The certificates will be offered via Bank of Boston CARS Grantor Trust 1987-A, set up by a special-purpose subsidiary called Salomon Brothers Receivables Inc.

It marks the first use of the unit, which will act only as a conduit passing along bank receivables to investors. A Salomon official said SBRI is capable of playing a far broader role in future asset-backed offerings.

Like Asset Backed Securities Corp. set up by First Boston Corp., SBRI is designed to issue debt or equity backed by receivables and can reinvest in residual receivables.

The $100 million offering — structured as a sale for both regulatory and tax purposes — represents roughly a third of the bank's auto and light-truck loans.

Cahill said the bank, relatively new in consumer lending, sees its portfolio as equal in quality to that of Marine Midland Banks, which recently completed a $600 million offering of car loans. Marine paid 86 basis points over comparable treasuries, and Cahill hopes to pay no more.

The bank, negotiating with letter-of-credit issuers to guarantee partial payment of interest and principal, is seeking a triple A rating on the certificates.

Wall Street Firms Grapple For Citi S.D. Credit Card Sale

Citibank South Dakota, the largest U.S. credit card lender, is considering proposals from at least four investment banks that are vying for the right to offer securities backed by its credit card receivables.

The Sioux Falls, S.D.-based bank, with about $10 billion in credit card receivables, represents a potentially huge piece of business for investment bankers.

"They want this business in the worst way," said a source familiar with the situation. The source was referring to Citicorp Investment Bank and First Boston Corp., leading contenders in the competition. Two or three other firms were also said to have offered their services.

However, officials at Citibank S.D. are not yet sold on the securitization concept, according to sources speaking

S&P Ready To Rate C&I Loans

After years of study, Standard & Poor's Corp. says it is ready to assign credit ratings to commercial loan participations.

S&P officials say they expect to publish their first rating of a commercial loan before the end of this year, and possibly within the next couple of months.

However, the success of S&P's pilot plan hinges on the willingness of a few major New York banks to actually apply for ratings on loans they intend to sell, according to Roy Weinberger, an S&P managing director who has worked on the project.

S&P has discussed the rating proposal with at least Citicorp, Bankers Trust New York Corp. and Chase Manhattan Corp., but so far none has said definitely whether it

MARKETING MANAGEMENT

Expert Marketers Put Expert Systems to Use

By MICHAEL P. SULLIVAN

ARTIFICIAL INTELLIGENCE and expert systems are becoming part of the technological menu of the largest financial services companies. While those institutions are finding the greatest need in diagnosis and production decisions, technology experts see the marketing function as an area in which most decision-making will have expert and advisory diagnostic systems as early as 1990.

Marketing in financial services has been driving in recent years toward use of more technology in the planning and execution of marketing plans. AI and expert systems tools will provide marketing management with greater confidence in decision-making and a growing feeling that technology will help the company increase the odds in favor of success.

For example, with the advent of publicly available computerized data bases, the retail marketing executive can purchase demographic and psychographic information on almost 90% of all the households in the United States. Financial services marketers are prime prospects for information and data base suppliers. Witness the amount of advertising in financial service publications, and the exhibitors at financial marketing conferences.

Sullivan Says:

> **The survey suggested the** use of artificial intelligence and expert systems technology was not so much a coordinated strategic effort but more of a guerrilla movement.

One cooperative venture between a major national business information supplier and a media-oriented firm provides names, addresses, and telephone numbers for all U.S. households with a telephone or a registered automobile. With this plethora of information available, expert systems programs can be used to optimize direct response marketing strategies.

By no means have financial services executives completely bought into the technology. A 1985 Cooper & Lybrand's study, conducted by Lou Harris, asked large companies about the future of technology in the financial services industry. Findings concluded that only one in five of the financial services institutions studied had applied expert systems and artificial intelligence on a pilot or full-scale basis.

However, over 50% of those surveyed have already applied expert systems or will likely do so by 1990. As a result of the optimism over the technology, the company estimates that the market for AI technology will surpass $4 billion in 1990, an event they equate with the microcomputer boom of the 1970s.

The survey concluded that few financial services executives are familiar with the technology. Most doubt it will revolutionize their business. However, many feel they cannot afford "not to get involved."

The biggest financial services advocates of artificial intelligence and expert systems are those in the insurance sector, particularly property-casualty and multiline insurers.

Mutual Life Offers Clues

Many of the larger companies have developed systems in underwriting and claims settlements. The Feb. 10 edition of the *American Banker* reported that the Mutual Life Insurance Company of New York is the first to put artificial intelligence onto a mainframe computer system for underwriting and issuing policies. The program, called Clues, automates 5,000 steps in the underwriting process.

Software providers like Syntelligence Inc., Sunnyvale, Calif., have developed programs such as its Underwriting Advisor for insurance companies and Lending Advisor for commercial banks lending to the middle market.

A later survey sheds more light on the use of artificial intelligence and expert systems. A mid-1987 study by the Bank Administration Institute of the 100 largest banks, holding companies, and savings and loans about use of artificial intelligence and expert systems shows an increasing interest in the technology. Forty-five percent said they were exploring, developing, or using artificial intelligence. Twenty-seven percent said their AI systems had reached the utilization stage.

The Bank Administration Institute survey suggested the use of artificial intelligence and expert systems technology was not so much a coordinated strategic effort but more of a guerrilla movement, used occasionally as an alternative to solving specific problems.

This underlies one of the early lessons about this technology: It should not be forced on the problems, but rather the proper application for the use of the technology should be found.

The strategic use of technology is best typified by the work that Citicorp is doing. It is reportedly working with expert systems to reduce customer service representative transaction time while increasing cross selling and improving service. Other expert systems include platform officer automation and improving information support services.

American Express is using expert systems to identify abnormal purchase attempts and reduce card fraud. John Hancock is using expert systems to help its agents identify the appropriate financial products to meet a client's specific needs. The marketing of personal financial planning, which at this point has not proven commercially feasible, may get its greatest impetus from artificial intelligence and expert systems.

If the technology is already showing these capabilities, then it may have a major impact on the marketing of financial services by the early 1990s. Marketing executives will need to become aware of the opportunity and conversant in the technology.

Understanding artificial intelligence and expert systems begins with a definition of terms. Former McKinsey executive David Bendel Hertz, in his recently published book, "The Expert Executive," (John Wiley & Sons) provides the following definitions for artificial intelligence and expert systems:

- "Artificial intelligence" is a computer-science-related study or discipline that is built around computer-based simulation of intelligent behavior. The discipline includes computer science, programming and technology, psychology, cognitive science, neuroscience, brain science, and logic as well as some philosophy.
- "Expert systems" are defined as computer programs that provide advice and diagnoses for advisory programs ordinarily dealt with by human experts. Building such expert systems has been made possible by the results of artificial intelligence research and computer science.

Understanding expert systems also means understanding its limitations. In order to have expert systems, Mr. Hertz concludes, expert knowledge must exist relative to the problem to be solved. The system is only as good as the factual and procedural knowledge it is given. The problems used in testing the expert system should independent of the ones used in developing the system. Users must be involved in the development, especially the guidelines. The system must be maintained.

As part of a marketer's education in artificial intelligence and expert systems, he or she should attend a seminar on the subject.

Artificial intelligence and expert systems offer the financial services industry marketer a new technology that will certainly differentiate the company from its competition. It depends on how soon one gets up on the technology. ■

Mr. Sullivan is a communications consultant based in Charlotte, N.C.

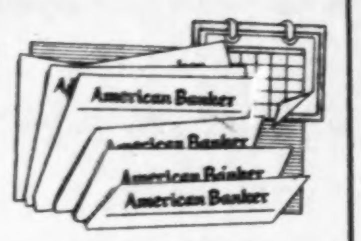
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- A U.S. District Court jury awarded a former Chicago auto dealer $1.2 million in his suit against General Motors Corp. The dealer, Fred Emich, charged that the company revoked his franchise because he refused to use its financing subsidiary, the General Motors Acceptance Corp. The company maintained that it revoked the dealership because of bad business practices. General Motors charged that Mr. Emich kept unreliable books, was unable to meet competition, failed to sell his quota of cars, and used "his dealership as a front for his own finance company."
- Gordon S. Rentschler, chairman of National City Bank of New York, died of a heart attack in Havana while on vacation. He was 62.
- An Iowa banker, Daniel J. Monen, was quoted in the Congressional Record in opposition to universal military training. He said, "Conscription of youth in peacetime will, through interruption of study in science and engineering and democratic processes, do more damage than good."

20 Years Ago

- The Supreme Court sent the antitrust suit against Third National Bank, Nashville, back to a lower court, with instructions to apply tough new standards under the Bank Merger Act of 1966.
- President Johnson proposed programs to provide insurance against riot damage in the nation's cities. The administration cited the "major problem" of limited availability of coverage for fire, vandalism, malicious mischief, burglary, and theft in inner cities.
- Rep. Wilbur Mills, D-Ark., warned that a substantial hike in military spending "could force Congress to support" an income tax increase. He said there would be pressure to reduce domestic spending if taxes were raised.

10 Years Ago

- Officials of Textron Inc. told the Senate Banking Committee that G. William Miller, who was the company's chairman and a nominee for the chairmanship of the Federal Reserve Board, did not know that a payment the company made to a representative of an Iranian sales company might have benefited the commander in chief of the Imperial Iranian Air Force.

5 Years Ago

- In the first such move by the Reagan administration, the Justice Department filed an antitrust lawsuit to block the merger of First State Bank of Wise, Va., into Virginia National Bank, Norfolk.
- A coalition of banking and housing industry groups — including the American Bankers Association — urged Congress and the President to stop bickering and start slashing the size of the projected budget deficit. In a full-page advertisement in The Washington Post, the coalition warned that failure to cut the deficit raised the "specter of an overwhelming volume of deficit financing which haunts housing and financial markets and poses the threat of economic and financial conditions not seen since the 1930s."
- The National Credit Union Administration proposed allowing credit unions to set for themselves all terms for savings accounts, including interest rates.

1 Year Ago

- The Securities Industry Association asked the Supreme Court to review a decision allowing Bankers Trust Co. to place commercial paper.
- Texas thrifts, buffeted by the state's decline in real estate values, reported total losses of nearly $3.3 billion for 1986 and ended the year with nonperforming loans at nearly 17% of assets, according to the Federal Home Loan Bank Board.
- The financing subsidiary of General Motors Corp. announced it would begin a direct-mail campaign offering $25 billion in preapproved credit to two million preferred customers nationwide. The move was the latest in a series of actions by GMAC Financial Services to take a larger piece of the auto-financing pie.

First Republic's Lead Bank Sees Deposits Drop

By DAVID LaGESSE
Southwest Bureau

DALLAS — Deposits fell about 8% at First RepublicBank Dallas, the lead bank of First RepublicBank Corp. during the third week of February, a drop the company attributed to rumors of a pending bailout.

First Republic's denials of those rumors, and efforts to reassure depositors, subsequently slowed the deposit outflow, said Gerald W. Fronterhouse, the company's chairman.

"By the middle of last week, the sources of funds for the Dallas bank and for the corporation as a whole appeared to be stabilizing," he said in a prepared statement.

For the week ended Feb. 24, First Republic lost about $600 million in deposits, its daily average falling to $6.8 billion.

Mr. Fronterhouse said the deposit decline "reflects mainly the impact of earlier false rumors and extensive adverse publicity." In mid-February, the bank was the subject of numerous rumors, which picked up momentum after *The Wall Street Journal* reported that federal regulators were closely watching First Republic.

Some institutional investors had already withdrawn their uninsured deposits after a key rating of First Republic's creditworthiness — prepared by Keefe Bruyette & Woods Inc. — fell to its lowest level last month.

A number of banks also withdrew their check-clearing business from First Republic, fearing losses or service disruptions if the bailout rumors proved true.

Meanwhile, the ratings of two other Texas banks fell to the same level at the same time as First Republic's, though without the accompanying rumors and publicity. Both Texas American Bancshares Inc., Fort Worth, and National Bancshares Corp., San Antonio, reported stable or even rising deposits during the same period in which First Republic had an outflow.

"We get most of our deposits through our retail branches, and they just aren't likely to be affected by the ratings," said Gene Jones, treasurer of National Bancshares.

According to figures released by the Federal Reserve Bank of Dallas, a number of Dallas and Fort Worth banks reported a rise in deposits, apparently because of the reported problems at First Republic. For example, deposits at the Fort Worth-based lead bank of Texas American increased slightly, from $2.042 billion to $2.072 billion during the week ended Feb. 24.

That rise reflected a pickup in two categories of deposits that a problem bank is most likely to lose: certificates for more than the limit on federal insurance and foreign deposits. ■

Strategic Dates
Sept. 1, 1990

STRICT CHECK RULES: Starting today, banks and thrifts must abide by strict check-hold rules, including one that breaks up a consumer's deposit according to availability. Under the law, institutions must make the first $100 of any deposit available for cash withdrawal at the opening of business the day following deposit; the next $400 of the deposit must be available no later than 5 p.m. the next day, and the balance has to be ready for withdrawal at the start of the third day.

Seidman: '87 Was a 'Forgettable Year' for Banks

➞ Continued from Page 3

Quinn, a financial economist in the FDIC's research and planning department. "That's something we haven't seen in while," he said. Mr. Quinn pointed out that the problem bank list grew in 1986 despite a record number of bank failures.

Mr. Seidman said banks in the Southwest will continue to struggle this year, but he said the regional economy is not expected to worsen. More than a third of the banks in the Southwest are unprofitable, with return on equity at a negative 11.81%.

Industry consolidation continued, according to FDIC figures. There are now 13,700 commercial banks, the lowest number since 1971. The number of banks peaked in 1984 at 14,500.

The FDIC itself reported 1.1 cents of deposit insurance to cover every dollar of insured deposits, an all-time low. ■

Digital Equipment to Place VAX in AmeriTrust Units

CLEVELAND — Digital Equipment Corp. will install a VAX minicomputer to drive the present Ericsson terminals in each AmeriTrust branch in Ohio and Indiana under a $10 million joint program.

The Cleveland-based bank has 210 branches in the two states. Installation of the system will start late in 1989 and run over five years.

The VAX equipment will replace the Ericsson minicomputers that now drive some 800 teller stations in the branches and will connect to an IBM host computer. The Ericsson teller workstations will be retained.

AmeriTrust said the VAX will permit others besides tellers, such as customer service officers, to access account information. ■

An American Banker Survey

Half of Respondents Expect Merchant Units to Profit

➸ Continued from Page 1

the *American Banker* survey said merchant profits account for less than 10% of overall credit card profits.

Last year, Keefe, Bruyette & Woods Inc. estimated that credit card operations at the biggest issuers were yielding a pretax profit of 4.75% on assets in the first half of the year, making credit cards among the most profitable of bank products.

For a bank, the merchant business in a credit card operation is basically providing the retailer access to the Visa and MasterCard networks. This means that the bank, or a third-party acting for the bank, authorizes credit card transactions for the merchant, credits the merchant's bank account when it deposits credit card receipts, and submits these receipts to Visa and MasterCard for settlement.

For these services, the bank charges the merchant a so-called discount fee on each credit card transaction. This fee is negotiated separately with each retailer and generally ranges from 1.5% to 4% of the transaction amount.

Make Money or Get Out

"When you make [the merchant business] a stand-alone product, you either make money or you get out of it," said Stephen R. Hooper, assistant vice president at Mellon Bank in Pittsburgh. "We've got our expenses more under control."

Manufacturers Hanover Trust Co., New York, got out of the merchant processing business when it sold its operations to First Financial Management Corp., Atlanta, in January. The bank said it wanted to concentrate on its "much higher return, nationwide consumer cardholder business," said Manufacturers vice president John Meyers.

Also in January, Chemical Bank sold its Chicago-based merchant credit card business to Electro Data of Denver. Chemical announced in November that it planned to discontinue the unprofitable Chicago business as part of a streamlining effort. Its New York-based merchant operation was not affected by the sale.

"People are paying a little more attention to it," said another banker, who requested anonymity. "We in this whole group could do a lot better if we'd just run it for profit."

The *American Banker* survey found that a large majority of banks — 44 of 50 with merchant operations — track the profitability of their merchant operations.

But George Norris, senior vice president at Rocky Mountain Bank Card System Inc., Denver, said: "It would amaze me if it's that high."

And bankers think gauging profits is easier said than done. "I think the allocation of merchant and cardholder revenues is murky at most banks," said Cynthia A. Graham, senior vice president at Barnett Banks Inc., Jacksonville, Fla.

Some bankers expect help in another area. "I'd say technology is going to give us the edge," said Dennis R. Babcock, vice president at Shawmut Bank in Boston. He was referring to so-called data capture programs, which use an electronic terminal at the merchant location to handle the credit card transactions. This is cheaper than the old-fashioned method, which requires a phone call by the store clerk to check if the card is valid and a deposit of paper sales slips at the merchant's bank to credit the sale.

> Keefe, Bruyette & Woods estimated that credit card operations at the biggest issuers were yielding a pretax profit of 4.75% on assets, making credit cards among the most profitable products.

Data capture also saves banks money because use of that technology entitles the merchant bank to pay a lower "interchange fee" to the card-issuing bank. For every bank card transaction, the merchant bank pays an interchange fee to the bank that issued the card.

Since the interchange fee is built into the discount fee that the merchant bank charges the retailer, a lower interchange fee means extra money for the bank.

Some See Little Benefit

But some bankers see little financial benefit from data capture.

The biggest merchants have a keen understanding of bank card operations and know that data capture cuts costs for banks. These merchants usually force banks to give up most of the savings from lower interchange fees in the form of a lower discount rate.

"The major merchants know the card business better than the banks do," Mr. Babcock said.

On the other hand, in many cases banks have been more successful in keeping for themselves the savings from data capture when dealing with smaller, less sophisticated merchants.

"The regional banks have been able to price the product in the middle range and make a pretty good profit because they can render a really good service," said Steve Glaser, a vice president at California First Bank, San Diego.

Rocky Mountain Bank Card offers data capture, but Mr. Norris said the technology's potential gains through lower costs depend on the merchant.

"We've tended to pass on our savings to the merchant," Mr. Norris said.

Mr. Glaser said the biggest retailers choose credit card service based strictly on the cheapest discount rate, but medium-size merchants will pay a premium for a superior service.

But Mr. Norris was skeptical about future profitability.

"Pricing is getting more competitive," he said. "I feel we're getting lots of pressure."

Mr. Norris said banks are hiring aggressive nonbank marketing companies to sign up merchants for the banks' credit card services. These third-party marketers are penetrating the ranks of regional merchants, Mr. Norris said.

"There are third-party marketers coming into the area trying to undercut you," he said. ■

Today

The Continental Illinois case goes to trial on Tuesday four years after the first indictments. Some believe legal entanglements that have delayed the trial could weaken the memories of witnesses and prove a serious liability for the government's case. Among the central questions is did the three defendants intend to defraud Continental and scheme to violate its lending policies. ______ 2

Foreign banks are getting stronger in currency dealing in Japan since government restrictions have largely driven Japanese banks out of the business. Citicorp, First Chicago Corp., and J.P. Morgan & Co. are considered the major beneficiaries. ______ 3

Disgruntled stockholder Fredrick J. Erck is expected to withhold his support for the recapitalization plan of First City Bancorporation of Texas. A. Robert Abboud and other new owners, he says, could reap extraordinary benefits under the plan. ______ 16

Executive Changes ______ 10
Global People ______ 10
In the News ______ 3

COMMENT

Suspending stock dividend payments may help banks — particularly the money centers — to conserve precious capital, writes Christopher C. Ohman. He argues that it is futile for banks to pay dearly to raise capital, and then promptly give it away in the form of dividends. The opposing view, from an article in *First Boston Equity Research*, maintains that dividend cuts could undermine investor confidence in the financial system. ______ 4

THRIFTS & MORTGAGES

Some Wall Street dealers are refusing to sell asset-backed securities and other obligations to bank traders at a traditional discount, according to Ralph Horn, head of trading at First Tennessee Bank, Memphis. ______ 3

Leading suitors for Georgia's largest thrift are Barnett Banks Inc., Jacksonville, Fla.; Houston Industries Inc.; and Commercial Credit Co., Baltimore. All have informed Fuqua Industries Inc. of their interest in acquiring its subsidiary, Georgia Federal Bank, which has $3.8 billion in assets. ______ 6

Freddie Mac's budget for seven convention theme parties this year is $339,316. Unlike most federal agencies, the congressionally chartered corporation has aggressively promoted itself through such parties since 1984. ______ 6

Thrift mergers in Massachusetts are expected to pick up, particularly on Boston's South Shore, thanks to lower stock prices and lower expectations from potential sellers. ______ 7

If thrifts adopt the relatively simple calculation known as net interest margin, investors will find thrifts more appealing, writes Jerome I. Baron of Prudential-Bache Securities. ______ 8

I'm not the troublemaker sort.

Fredrick J. Erck, the stockholder who has objected to the proposed recapitalization of First City Bancorporation of Texas Inc. [Page 16]

Senate Panel Backs New Powers for Banks

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — The banking industry rolled up a huge victory Wednesday night when a Senate panel overwhelmingly approved a bill that could lead to full repeal of the Depression-era Glass-Steagall Act. But bankers already are casting a wary eye at the House, where they face sterner tests.

The bill permits banks to underwrite any type of security, except corporate equities, within six months of enactment. It also requires a vote on corporate stock underwriting no later than 1991.

Committee staffers say the bill could go to the Senate floor as early as next week. It is expected to pass by a wide margin.

In the House, the measure must go through two committees — Banking, and Energy and Commerce — neither considered friendly to expanded bank powers. Observers predict that the House will water down the securities powers authorized by the Senate and tighten some of the restrictions.

"We have gone one-third the way up Mt. Everest," said J. Denis O'Toole, chief congressional lobbyist for the American Bankers Association.

Moreover, he said, if the House committees take too much time drafting and reporting out legislation, the bill will begin to run up against the timing complications of a presidential election year.

AN AMERICAN BANKER SURVEY

2 Bank Cards Rate Evenly on Service

By MICHAEL WEINSTEIN
Fourth of a Series

Bankers give Visa higher marks than MasterCard for consumer advertising and operations expertise, but they gave MasterCard a slight edge over its rival for product development, according to the *American Banker's* second annual credit card survey.

The two organizations were rated about even for responsiveness to members, the survey found.

Last June, the *American Banker* mailed 110 questionnaires to the nation's biggest financial institutions and top credit card banks. Sixty responses were received by mail or by telephone in the next several months. Fifty-five banks had been members of both Visa and MasterCard for at least one year, and that group served as the base for

Hanover Puts Consumer Unit Up for Sale

By JED HOROWITZ

NEW YORK — Manufacturers Hanover Corp. has put its $3 billion consumer finance company on the auction block and is asking for more than $600 million, according to Wall Street sources.

Manufacturers Hanover Consumer Services, a 542-office network based in Huntingdon Valley, Pa., earned from $55 million to $60 million in 1987 and has a book value of about $315 million, said sources who have studied the company. Goldman, Sachs & Co. has been retained to help sell the finance unit, they added.

The decision to sell the profitable business reflects Manufacturers Hanover's scramble to raise equity following a $1.1 billion loss in 1987.

Consumer finance companies have been selling at more than two times book value or ten times earnings, according to one banker. Several bank

Dividends: To Cut or Not to Cut

High Cost of Capital May Mean Lost Income for Bank Shareholders

By CHRISTOPHER C. OHMAN

WITH THE august J.P. Morgan & Co. losing its coveted AAA bond rating this month, the post-depression era of bedrock stability for banks has formally come to a close.

Events of the past 10 years — including deregulation, the Latin American debt crisis and the Federal Reserve's new risk-based capital requirements — have created an urgent need for banks to raise substantial new capital.

However, bank securities have fallen from their former gilt-edged status to become increasingly volatile and risky. And, for the immediate future, the Oct. 19 stock market crash has prevented most banks from looking to the equity market for new capital.

Citicorp surely counts its blessings that it went to the market last September, before the crash, with its $1 billion stock issue. Still, that issue cost Citicorp's shareholders 14.4% in dilution. If, after the crash, Citicorp wanted to raise the same amount of equity, its shareholders would have suffered dilution of about 23%.

If Citicorp must dilute its equity base by nearly one-fourth to raise substantial new capital, what choices do the weaker banks have? Bank of America paid dearly for the $350 million in new debt it raised last fall from the Japanese. Imagine what it would pay today for new equity.

Still, other banks might follow the example of Bank of America by adopting a simple measure to raise much-needed equity at no expense: Stop paying a dividend.

Indeed, the timing is excellent for such a radical step as cutting out dividends. With stock prices too low to allow most banks to issue new stock, the market would have sufficient time to absorb the bad news before banks would need to raise new equity from the market.

The banks might as well take another blow now, while reeling from the other blows they have taken. Indeed, one could argue that Bank of America's stock price suffered little as a result of canceling its dividend. This is because concerns about its underlying business were the driving force in the decline of BofA's stock price.

While waiting for the market to recover, banks would accumulate the dividends not paid, making their stocks more attractive to potential new shareholders.

A less painful alternative could be replacing a cash dividend with a stock dividend, though a stock dividend can be costly in terms of dilution.

Now that they are in this pickle, bank management needs to respond with new capital strategies as radical as the changes in their operating strategies.

Finally, raising new capital seems futile when combined with a generous dividend policy. Banks simply give back the expensive new capital in a remarkably short period.

Citicorp, for example, paid out over $300 million in common dividends in 1987, and will thus give back the $1 billion it raised last fall in just over three years. Adding insult to injury, Citicorp paid Merrill Lynch another $29 million to raise the new equity.

Little wonder that First Boston, in a January 1988 report on money-center banks, specifically recommended that banks continue to pay a dividend. Changing a dividend policy doesn't cost a penny.

Concern about shareholders is well placed, particularly the human impact on pensioners who rely on dividends — and this group would be very difficult to abandon.

Still, bank management teams cannot be faulted by their shareholders for the rapid convergence of several major events that undermined the foundations of the entire financial services industry.

Now that it is in this pickle, bank management needs to respond with new capital strategies that are as radical as the changes in their operating strategies.

Otherwise, bank shareholders will be replaced by new owners, such as foreign banks flush with cheap dollars. Several securities houses are now owned in whole or in part by such foreign institutions.

A host of pressures have combined to force banks to raise capital. With most banks presently frozen out of the market for new equity, they should stop paying a dividend. ■

Mr. Ohman is a vice president in the San Francisco office of a New York money center bank.

Loss of Investor Confidence Could Cost Even More

The following is excerpted from an article that appeared in the Jan. 15, 1988, edition of First Boston Equity Research.

□

AS A RESULT of events in December, investors have finally become fully aware of the equity need of most money center banks, a need that in many cases is massive.

While a portion of the necessary equity can be generated by retained earnings, utilization of tax-loss benefits and special gains, a major portion still has to be achieved through the sale of stock.

Offerings will be more difficult in the present environment than in the fall of 1987, and the potential per-share earnings dilution will be significantly greater because of sharply lower market prices.

We believe money center bank stocks will remain in a trading range with the low side being the lows reached in December. The upside potential however, is limited because of investor concern about how the recapitalization of the banks will be achieved and concern about the ability to maintain dividends.

In our view, the money center banks must maintain their dividends if they hope to be able to raise additional equity.

Payment of dividends is ultimately the decision of the respective boards of directors, but the decision is also affected by regulators. Under Federal Reserve policy guidelines, a bank must ask permission to pay dividends if certain earnings and net worth tests are not satisfied.

Under the earnings test, the current year's adjusted net income plus two years of retained earnings must exceed the dividend. Earnings are adjusted to reflect actual loan losses — not provisions for loan losses — and should not reflect an undue reliance on nonrecurring gains.

While a dividend reduction would act immediately to increase retained earnings, it might cause a negative response from the investment community.

The net worth test requires that the sum of retained earnings plus the reserve for loan losses less "bad debts" (those loans six months or more past due) must exceed the dividend payment. An important issue still being debated is whether loans to Brazil, where interest is more than six months past due, is included in the bad-debt deduction.

The board of directors' decision to maintain dividends is somewhat more difficult. This is especially true when considered in relation to core operating earnings and, possibly, placing loans to lesser-developed countries on nonaccrual status.

Given the banks' need for capital, the first reaction of a board is likely to be to reduce, if not eliminate, the dividend. From a financial sense even the elimination of a dividend is not enough to really solve the equity need.

While a dividend reduction would act immediately to increase the amount of retained earnings, it might cause a negative response from the investment community. It could result in the bank's having great difficulty in securing access to the equity market.

Confidence factors must also be considered because banking is a business that depends on confidence. A dividend cut, especially one for a money center bank, could significantly impair confidence — not only in a single bank but for the financial system in general. ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, Banking Week, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number.

Remember, we need your views to be a true community newspaper.

EXECUTIVE CHANGES

Fidelity Names Morgan Chairman

Bernard J. Morgan has been named chairman and chief executive of **Fidelity Bank,** Philadelphia's largest commercial bank. Mr. Morgan also has been named president and chief executive officer of Fidelcor Inc., parent company of Fidelity Bank and of Merchants Bancorp, which includes Merchants Bank NA, Allentown, Pa., and Merchants Bank, North, Wilkes-Barre, Pa. He succeeds **Harold W. Pote,** who has become president and chief executive officer of First Fidelity Bancorp., Fidelcor's new parent company. Mr. Morgan is vice chairman of First Fidelity. **Rosemarie R. Greco** continues as president of Fidelity Bank and **Carl J. Feichtel** continues as chairman and chief executive officer of Merchants Bancorp and Merchants Bank NA. Prior to assuming his new posts, Mr. Morgan served as deputy chairman of Fidelcor and Fidelity.

AURORA NATIONAL BANK, Aurora, Ill., has named **James E. Schwarz** controller, and **Earl J. Weincek** has joined the bank as director of business development. Mr. Schwarz, previously assistant vice president in accounting, will be responsible for the financial planning and reporting for the bank's operations. Mr. Weincek is responsible for customer calling and new business development. He spent five years at the Northern Trust Co. and was a vice president at Unibanctrust Co., Chicago.

FIRST CONSTITUTION BANK, New Haven, said **Edward M. Hall** had joined as senior vice president of product management and marketing. He has held various posts at Wells Fargo Bank, Bank of America, and, most recently, with First Interstate Bank, all based in California.

MERCANTILE BANK NA, St. Louis, has elected **Russell L. Whites** and **Thomas E. Wilcox** vice presidents. **Charles T. Franckle** has been elected senior vice president and asset-liability manager of Mercantile Bancorp., the bank's parent company. Mr. Franckle joined Mercantile last month from First City Bancorporation of Texas Inc., Houston.

SOVRAN FINANCIAL CORP., Norfolk, Va., has named senior executive vice president **Albert B. Gornto Jr.** president and designated him to succeed **C.A. Cutchins 3d** as chairman and chief executive officer as of April 1989. Mr. Gornto will continue to direct all staff functions for the holding company, including corporate finance. **Dennis C. Bottorff,** currently a vice chairman, has been named to the additional post of chief operating officer and will be responsible for the operation of the company's banking subsidiaries, including the newly created Sovran Financial Services. **Doyle E. Hull,** senior executive vice president and chief financial officer, has been named president of Sovran Financial Services, with responsibility for the operation of the company's financial services affiliates, investments, and for the coordinated delivery of various of the company's corporate products. **C. Coleman McGehee,** formerly president and chief operating officer, will continue as chairman of the holding company's executive committee. The new assignments will take effect on April 1 of this year. At the request of the board of directors, Mr. Cutchins, who will be 65 in July, will continue his active service with the company until its annual shareholders' meeting in April 1989.

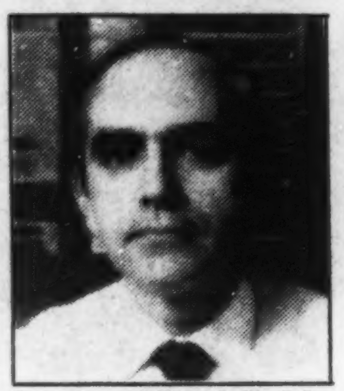
FIRST REPUBLICBANK DALLAS has named Thad Holt a senior vice president and director of finance and banking administration.

— Franklin Smith

GLOBAL PEOPLE

Rushfield Named to American Express Unit

NEW YORK — **Leonard H. Rushfield,** an international banker based in California for 15 years, has been named executive vice president and a director of American Express Bank International. He will direct the Western regional operations of the international banking subsidiary of American Express Bank Ltd. Mr. Rushfield will be based in Beverly Hills.



Leonard Rushfield

The international banking unit provides comprehensive, U.S.-based private banking service to international clients.

The new director joined American Express Bank International from Republic International Bank of New York (California), where he was president.

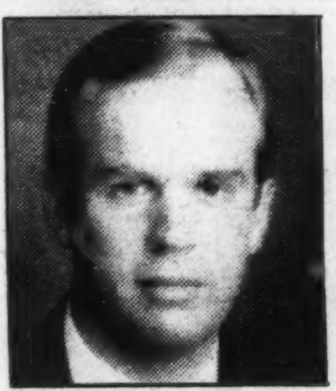
NEW MANAGING DIRECTOR: Barclays Bank PLC, London, said **John Quinton** will become managing director May 1. He will succeed **Peter Leslie,** who retains his position as deputy chairman.

MIDLAND APPOINTS DIRECTOR: Midland Bank PLC, London, has appointed **T. Jefferson Cunningham 3d** to its board of directors, bringing the total number of Midland directors to 21. Based in New York, Mr. Cunningham has been advising the British financial institution on its international strategy.

HELLER'S INTERNATIONAL ARM: Dennis P. Lockhart has been named president of Heller Overseas Corp., the international operating company of Heller International Corp., Chicago. Mr. Lockhart will be responsible for directing the company's network of wholly owned operating companies, affiliates, and joint ventures with leading financial institutions in 17 major European and Pacific Basin countries. He is the former vice president and head of Citicorp's debt-to-equity conversion program in the bank's Caribbean, Central American, and South American operations. Mr. Lockhart had been with Citicorp for 16 years.

INVESTMENT BANKING UNITS: Credit Lyonnais, Paris, and Commerzbank Aktiengesellschaft, Frankfurt, West Germany, have reorganized their jointly held EuroPartners Securities investment banking subsidiary into two independently owned units: CL Global-Partners and Commerzbank Capital Markets Corp. Both are located in New York. **Karl Oellinger** and **C. Peter Tillmanns** are managing directors of Commerzbank Capital Markets. At CL Global-Partners, **Thierry Magon de la Villehuchet** is chairman, **Austin J. Jones** is chief financial officer, and **Steven Resnick** is managing director.

BRAZIL REP: Norwest Corp., Minneapolis, has named **Christopher Greer** as its representative in Brazil, a new post. He will be based in Sao Paulo. Mr. Greer was with Chemical Bank in Brazil as its representative for corporate relationships and a director of its investment bank, Banco Noroeste. **Darin Narayana,** Norwest executive vice president, international, said Mr. Greer's primary responsibilities will be to help the international staff further reduce Norwest's total exposure in Brazil, manage remaining exposure, and increase nonasset-related fee income.



Christopher Greer

TREASURY HEAD: Bank Leumi Trust Co., New York, said **Robert Giordano,** vice president, has been appointed head of its treasury trading department. His responsibilities include foreign exchange trading, asset liability management, and management of the bank's portfolio.

— Franklin Smith

AN AMERICAN BANKER SURVEY

MasterCard, Visa Rate Evenly On Customer Responsiveness

➻ Continued from Page 1

this part of the survey.

Industry observers were not surprised by Visa's edge in advertising.

"Visa's ads are just much more effective," said one consultant, who requested anonymity.

In interviews, bankers praised two of Visa's ads, both part of the campaign called "It's Everywhere You Want to Be."

One ad shows the Visa card being accepted at restaurants and travel spots that do not honor American Express. The other ad links Visa, which was one of only a few corporate sponsors of the Olympics, to the Games and concludes by reminding viewers that the Olympics "don't take American Express."

"People really liked the ads that struck out at American Express," said K. David Elgena, president of First City Bank-Sioux Falls in South Dakota, a subsidiary of First City Bancorporation of Texas Inc., Houston.

In contrast, industry observers said that MasterCard's recent ad campaigns have offered a fuzzy vision of its products.

A recent campaign — "Master the Possibilities" — featured celebrities discussing their ability to do what they want to when they want to.

In its newest campaign, "Choose To Make a Difference," MasterCard offers to make donations to six charities based on MasterCard sales volume. The amounts apportioned to each charity will depend on ballots submitted by consumers.

"The whole message here is charity dollars" rather than MasterCard's product, said a consultant with close ties to Visa, who requested anonymity.

MasterCard said its new campaign has "so much bank support" that it expects 80% of its cardholders to get statement stuffers about it. Member banks are responsible for sending out statements to cardholders.

MasterCard outspends Visa on advertising, according to *Advertising Age.* In 1986, Visa spent $35 million on U.S. advertising; MasterCard's budget was $52 million, according to the trade publication.

Although Visa and MasterCard run worldwide telecommunications networks, Visa scored higher for technical and back-office support.

"Visa has always paid more attention to detail and the planning of systems," said one consultant.

Another consultant with ties to Visa observed that Visa's perceived edge in operations may be a function of the powerful personality of Dee W. Hock, who served as Visa's chief executive officer from the card's inception in 1970 until 1984. Strong leadership promotes greater efficiency, the consultant said.

But such strong leadership may have worked against Visa when it comes to product development. Industry observers credit MasterCard's perceived advantage in that area in part to its willingness to discuss plans with members.

"MasterCard will call members periodically," said Mr. Elgena of First City Bank. "They like to bounce ideas off members. That might be why they came out ahead in product development."

MasterCard introduced a premium card before Visa, and of the two, only MasterCard offers a corporate credit card.

That the two associations scored about the same in their responsiveness to members surprised even Visa supporters.

"I'm surprised it came out a wash," said the consultant with ties to Visa. "Historically, Visa was viewed as tyrannical."

Visa declined to comment on the survey results.

He said Visa's apparent arrogance stems from the days when Mr. Hock was top man.

Next: Some banks are downplaying American Express products since the introduction of the Optima card.

'87 Annual Reports Sport a Few New Features

By JOHN P. FORDE

NEW YORK

WHO reads these things, anyway?The question is a common one this time of year, as the annual reports start to roll in. And it is asked by just about everyone in a position to receive the annuals of major banking and industrial companies — equity and debt analysts, major investors, special interest groups, and financial journalists.

The 1987 annual reports of major regional and money center banking companies will reflect the demands of some very significant readers, primarily regulators and representatives of investors. They've made their voices heard and prevailed on companies to provide increased information on areas like income taxes, loan fees, and Third World debt.

As in prior years, the 1987 annual reports will be part regulatory disclosure, part financial explanation, part fashion show, and part high school yearbook. They can also be part apology and, some bankers say, part information too technical for the average reader to understand.

SOME bankers last year used this line of reasoning to criticize a Financial Accounting Standards Board proposal on disclosure of financial instruments. The bankers said the panel that sets accounting rules overstated the financial knowledge of the average annual report reader.

Subjects such as offsetting foreign exchange interest rate swaps and various types of off-balance-sheet liabilities may be too intricate for the average reader to comprehend, they claimed.

Consultants are devising ways to give the right amount of information to investors who need it. For example, a new type of annual report, called the summary annual, is being prepared by at least one regional banking company. The report is shorter and contains less financial information than standard annuals. It's being touted by its developer,

Optima Causes Some Backlash Among Banks

Angry Institutions Drop American Express Line

By MICHAEL WEINSTEIN
Last of a Series

Some banks have stopped marketing American Express products since the company unveiled its Optima credit card, according to the *American Banker's* second annual credit card survey.

Eight out of 60 financial institutions said they have stopped offering American Express travelers checks or American Express gold cards since the announcement of Optima, a card that offers a revolving line of credit and that is similar to the MasterCard and Visa bank cards.

Top Premium Card Issuers
Page 22

The traditional green American Express card is a charge card, so cardholders must generally pay off outstanding balances by the end of each billing cycle.

Last June, the *American Banker* mailed about 110 questionnaires to the nation's biggest financial institutions and top credit card banks. Sixty responses were received by mail or by telephone in the following months.

The survey's results, while not statistically significant, highlight a trend some bankers said they have noticed among their peers. For its part, American Express said it has seen no bank flight from its products.

For years, banks and American Express have teamed up to deliver financial products to consumers and make money in the process.

Many banks sell American Express travelers checks, and the company

COMMENT

A walk with Paul Volcker reveals a hard-nosed glimpse of the future, writes Dr. Paul S. Nadler. _____ 4

NEWS MONDAY

Sen. Christopher Dodd won a good deal of what he sought in the Glass-Steagall repeal that emerged from the Senate Banking Committee. The package, which calls for banks to phase in securities activities and restricts their insurance powers, largely reflects that nobody on the committee wanted to vote in this election year. _____ 3

The first lesson in lobbying is to always make an appointment with a lawmaker before you arrive, as a group of trust bankers learned on a recent tour of Capitol Hill. _____ 15

A VIEW FROM OUTSIDE

MARTIN MAYER

Panama and the Banks

GEORGE D. MOFFETT 3d, who was assistant to the chief of staff in the Carter White House, describes the banking laws of Panama in his book, "The Limits of Victory," about the campaign to ratify the Panama Canal Treaties. "The legal environment," he writes, ". . . provided total freedom to carry on intermediary business in foreign currencies with no central bank regulations, no controls on the movement of capital, no bookkeeping requirements, no access to records for foreign authorities, no reserve or liquidity requirements, and, best of all, no taxes."

This total exemption from the slings and arrows of outrageous fortune was set up in 1969 by Nicholas Ardito Barletta, who was then planning minister and later the first of two presidents of Panama dismissed by Gen. Manuel Antonio Noriega. Mr. Barletta saw easy bank licensing and supervision as a source of income for Panamanians and, not least, for the government of Panama.

And, of course, as a source of loans. Mr. Moffett's book cites an unnamed "American banking official in Panama" who noted, among the benefits the host country derived from this arrangement, that "the banks lend freely to the government of Panama."

BANKING TRENDS

A Walk in the Economic Woods with Volcker

By DR. PAUL S. NADLER

WALKING DOWN THE street with Paul Volcker makes you feel important. It reminds me of the time someone was said to have asked J.P. Morgan for a loan, to which he replied: "I won't lend you money, but for a fee, I'll walk down Wall Street with my arm around you."

Mr. Volcker and I were in Orlando speaking at a users conference sponsored by the Kirchman Corp., the Florida software company. Walking with him afterward, I felt more significant than at any time since I went to a men's room with Henry Kissinger, where we had a bodyguard at each corner while we were inside.

Everyone recognizes the 6 foot 9 inch former chairman of the Fed — many come up and ask to have a picture taken with him. Mr. Volcker is so charming and kind it is hard to remember that until recently he was the second most important person in America in the mind of this observer and many others.

Of course fame dies quickly. Another attendee at the Kirchman conference reportedly went up to Mr. Volcker and queried, "Didn't you used to be Paul Volcker?"

But talk to him, and his thinking continues to show the impact of his years as a central banker.

- He was asked whether the regulations weren't crazy that require a bank to raise more capital if it realizes bond losses and marks the portfolio to market, while a bank is considered adequately capitalized if it does not take this step of realizing losses. His reply: "Anything that can force banks to raise more capital is all to the good."

Nadler Says:

Volcker gave a message that needs repeating, again and again: We are living beyond our means and will have to pay for it through a lower standard of living sooner or later.

- He was asked whether unfriendly takeovers of banks are good or bad for the nation. His negative response is couched in terms of fear for the strength of the bank rather than any other consideration.
- He was told that an employee of Bankers Trust Co. quit when his bonus was only $3 million after he had made a fortune for the bank in the foreign exchange market. Mr. Volcker's response was that no bank should allow the type of exposure that could lead to such foreign exchange profits, because it could lead to equal-size losses and thereby seriously damage the bank.
- And he was asked about the possibility that Black Monday might force the Congress and the President to do something about the budget deficit. He responded that for three days it appeared these governmental groups were scared and "got religion." But after that, it was back to business as usual. He added during his question and answer period at the convention that we may have to see another Black Monday before we truly do the job on the deficit that needs to be done.

A Mexican Reflection

While it was fun to walk and talk with the former head of the Fed, it was in his remarks to the convention that he was truly marvelous. Mr. Volcker gave a message that needs repeating, again and again: We are living beyond our means and will have to pay for it through a lower standard of living sooner or later.

To this listener at his breakfast talk, the most interesting comment he made was to compare us with Mexico seven or so years back.

The Mexican financial officials went to their president and complained that the nation needed fiscal discipline. But at that time Mexico was able to borrow all the money it wanted from U.S. banks, so the president dismissed the financial aides and continued with business as usual.

Later, when those banks stopped lending new sums to Mexico, the nation's finances went to pieces, and the peso dropped from about 12½ to the dollar to about 2,500 to the dollar.

Similarly, while foreigners still will lend us enough to cover our budget deficits, no presidential candidate is willing to talk about the economy without pledging to be against any tax increases or spending cuts. In Mr. Volcker's opinion, we may well suffer the same economic decline as Mexico when our ability to borrow abroad halts.

Already we have seen a cutoff of private investment in the United States, so the basic financing of our deficits must now come from central banks and governments, Mr. Volcker said.

With interest cost on the debt rising steadily as the deficit continues to burgeon, with more older people in the nation pressuring for more entitlement spending, and with limits to military cutbacks, he continued, we are in for trouble, because we do not have the productive capacity to grow out of our debt problems.

What about productive capacity? The dollar has dropped enough, and U.S. labor costs are now competitive in world markets, being lower than those in Europe and equal to those in Japan.

(Go to Epcot Center, as this writer did before the meeting. See the robot at the General Motors Corp. exhibit that can do all the dirty work that formerly required high-cost manual labor, and you can verify the success of United States in cutting labor costs sharply in the recent past.)

So the outlook, according to Mr. Volcker, is likely to be a lower dollar, higher interest rates, recession here and abroad, and stagflation, unless we do something soon.

Consumption Tax to the Rescue

What should we do? Mr. Volcker said the solution must come largely on the revenue side. As indicated above, spending cannot be cut much further, but there are real possibilities in consumption taxes.

Sure, we must do something about entitlements, like taxing Social Security benefits, modifying eligibility, and reducing cost of living adjustments.

But to Mr. Volcker the most important way we can work on the deficit is to pass a gas tax increase that brings in $50 billion to $60 billion a year, to raise cigarette and liquor taxes, and otherwise tax consumption.

"Democracy always waits for crises to take necessary steps, but this time the risk is too great," he concluded.

Changing the income tax again is not in Mr. Volcker's proposed agenda, but some changes in government's role and revenue sources are necessary.

He said that we are likely to have a new energy crisis within a few years; therefore we must curb our deficits $30 billion to $40 billion a year to keep foreign owned funds willing to finance it. If nothing else works, he said, the market will force change eventually through another Black Monday, at great risk to the nation.

"We always felt that our economy would continue to grow and our children would always be richer than we are," he said. "This is no longer true unless we do something to build productivity and halt the policy of consumption that vastly exceeds production."

In sum, Mr. Volcker has a major warning for the future because of our unwillingness to face economic reality today, and his warning is not pleasant.

Walking with him and thinking of the responsibility of the Federal Reserve in such an environment. I had to feel that at times he is pretty happy that he has given up the mantle of Fed — and that people now come up and ask him, "Didn't you used to be Paul Volcker?" ■

OVERVIEW

Why Do They Want to Be President?

By H. ERICH HEINEMANN

BY TOMORROW evening, the nation should finally get a clear picture of who the serious contenders will be for the White House in November. Voters in 20 states — mostly Southern, but also in the Northeast and West — will select roughly one-third of the delegates to the national party conventions this summer.

For practical purposes, the race should narrow to Vice President George Bush and Senate Minority Leader Robert Dole for the Republicans and Massachusetts Gov. Michael Dukakis and Missouri Rep. Richard Gephardt for the Democrats. While the contest won't be over by a long shot, the candidates now must start to shift their priorities to the painful issues that will confront the next administration, no matter who is elected.

The 1980s have brought radical changes to America. An enormous federal deficit (bigger than those of all previous administrations combined) has spawned a host of toxic side effects.

These include an unprecedented shortfall in international trade, the emergence of the U.S. as the world's largest debtor nation, the takeover of America by foreign investors, and, not least, the prospect of a significant curtailment of U.S. living standards in the 1990s. It makes you wonder why such a group of vigorous, otherwise intelligent men would even want to work at the White House, let alone be President.

Debt May Overshadow All

These developments will all pose major challenges to the next administration. Over the long run, they may pale in comparison with the fallout from the U.S. debt buildup and the concurrent erosion in credit quality. While the economy is growing, serious problems will be postponed.

However, a day of reckoning will come. The worst case would be a credit implosion — widespread, destructive defaults analogous to the collapse in the 1930s. While possible in theory, that outcome is very improbable. It is much more likely that the next President will have to present U.S. taxpayers with a humongous invoice for the cost of repairing the financial system.

A large part of the problem is the sheer size of the debt. Total nonfinancial debt (consumers, businesses, governments) was $3.6 trillion in 1980; it is $8.3 trillion today. More important, debt has grown much faster than the economy.

The debt-GNP ratio was about 1.3 to 1 at the beginning of the decade. It is now almost 1.8 to 1. Put differently, if the debt ratio today were the same as in 1980, total debt would almost $2.5 trillion lower than it actually is.

The party line at the White House is that these debt levels (and particularly the foreign debt) really don't matter much. As the President's Council of Economic Advisers put it in its annual report, "Even at $400 billion, net foreign claims on the United States are not large relative to the income that can be used to service them."

In an absolute sense, that statement is true at present. However, a dynamic process is under way. U.S. foreign debt is growing at a rate of more than $3 billion per week. In effect, the U.S. must go overseas to borrow the interest and dividends it owes its foreign creditors. Compound interest is a great concept if

Overview: Page 8 ➔

Banks Drop American Express After Optima's Introduction

Continued from Page 1

shares with banks the revenues generated by the sales. Traditionally, when a consumer signed up for an American Express gold card, a bank extended the line of credit that came with the card.

But in recent years, American Express has begun offering a wide array of financial products to consumers, and some bankers think an erstwhile teammate has become a threatening competitor. These bankers feel they are welcoming a Trojan horse into their branches by selling American Express products to their own customers.

American Express declined to say how many Optima cards have been issued.

When American Express announced its Optima credit card during March of last year, some bankers were outraged that the company would be competing directly with bank credit cards. Charles T. Russell, president of Visa U.S.A. Inc., sent a letter to the nation's bankers urging them to stop marketing American Express products.

Downplaying Travelers Checks

Since then, several banks have been downplaying American Express travelers checks, said Joel P. Friedman, director of strategic management at Arthur Andersen & Co. in San Francisco. "They might hide a stack of American Express travelers checks under the counter if someone comes in on their knees begging."

American Express is a venerable name in the travelers check business, but in recent years MasterCard and Visa have introduced their own travelers check products.

"I think Optima was the straw that broke the camel's back," said K. David Elgena, president of First City Bank-Sioux Falls NA in South Dakota, a credit card subsidiary of First City Bancorporation of Texas Inc., Houston.

Signet Bank, Richmond, Va., stopped selling American Express travelers checks in May 1987. "We felt that American Express was more of a direct competitor," said S. Joseph Ward, vice president at Signet.

Signet now sells MasterCard travelers checks in U.S. dollars and Thomas Cook checks, which are endorsed by MasterCard, in foreign currencies.

"We haven't seen any decline in the sale of travelers checks," Mr. Ward said.

Wells Fargo Bank stopped offering credit lines for American Express gold cards last spring, but Henry Silver, a vice president at the San Francisco bank, said that the company's move was coincidental with the Optima announcement.

> Signet Bank, Richmond, Va., now sells MasterCard travelers checks in U.S. dollars and Thomas Cook checks, which are endorsed by MasterCard, in foreign currencies.

"It just wasn't a significant piece of our business," Mr. Silver said.

There is no apparent alarm at American Express.

"We've seen no negative impact as a result of Optima," said Tom Cash, senior vice president at American Express Travel Related Services Co.

He claimed that American Express has boosted its market share of the travelers check business in the last year. The company historically refuses to disclose specific market share data for travelers checks.

American Express travelers checks are sold at about 150,000 outlets, mainly branches of financial institutions.

"Gold card is going along extremely well," Mr. Cash added. American Express has seen no decline in bank participation in the program, which now includes about 2,300 banks.

Recently, American Express has begun using a Delaware bank subsidiary to extend credit to gold cardholders, but Mr. Cash said commercial banks remain an important part of the program. "We're anxious to increase participation by banks," he said. ■

Maryland Bank Leads in Premium Cards

Maryland Bank, Newark, Del., is the nation's biggest issuer of premium bank cards, according to the *American Banker's* second annual survey.

Maryland Bank has concentrated on attracting premium cardholders, and they represent about 31% of the bank's total credit card accounts.

Nationally, 4.6% of all Visa cardholders have premier Visa cards, according to Visa U.S.A. Inc., San Mateo, Calif.

Premium card accounts are generally more profitable for banks than standard credit cards because premium cardholders maintain higher balances.

Like Maryland Bank, other top premium card-issuing banks have an unusually high level of premium cards.

According to the newspaper's survey, premium card accounts represent 54% of total accounts at Colonial National Bank USA, Wilmington, Del., a subsidiary of TSO Financial Corp., Horsham, Pa.; 25% of total accounts at State Street Bank and Trust Co., Boston; and 10% of total accounts at NCNB, Greensboro, N.C.

Premium card accounts amount to about 5% of credit card accounts at Bank of America, according to the survey.

Community Banking: Filling a Niche Profitably

After Winning with Service, Small Banks Want New Powers

By JAMES R. KRAUS

CONTRARY to forecasts that shrinking profit margins, interstate banking, and mergers and acquisitions would drastically reduce their number by the end of the decade, community banks are alive and kicking.

But as new local banks are chartered and existing ones take stock of the developments, community bankers say the question is, "Where do we go from here?" Specifically, they are trying to determine what businesses to pursue and what powers they will need.

The question takes on added importance because of the large number of institutions involved. Although it is easy to quibble over what constitutes a community bank, small, locally oriented institutions constitute the vast majority of commercial banks in the United States. And industry officials say that while consolidation is continuing, it is unlikely to pose a threat to community banking.

"We've gone through seven years of aggressive deregulation, and community banks will be digesting this for another seven years," says Kenneth Guenther, executive vice president of the Independent Bankers Association of America. One of the worst downturns in certain sectors of the American economy in many years — agriculture and energy in particular — has made it even harder to adjust to deregulation, he says.

The Federal Deposit Insurance Corp. listed 11,582 commercial banks with assets of less than $100 million as of Dec. 31, 1986. The agency insured a total of 14,689 commercial banks, trust companies, and savings banks as of that date. The banks with less than $100 million in assets accounted for $423.14

Heeding Fundamentals Is Key To Health of Community Banks

By JAMES R. KRAUS

RETURN on assets among the nation's most profitable community banks improved broadly during the first nine months of last year, according to the *American Banker's* most recent survey.

Bankers credit the improvement to conservative investment strategies, a decline in nonearning assets, low overheads, stable employment practices, and the exploitation of market niches.

Tables listing the nation's top 100 community banks begin on page 17.

Executives at some of the top-earning community banks insist they haven't done anything revolutionary.

"The bank itself hasn't changed any policies," says Gary E. Sherwood, president of the National Bank of Stamford, N.Y. The National Bank of Stamford came in first in profitability among independently owned, federally insured commercial banks with assets between $50 million and $175 million.

But despite the bank's high ranking, it was one of the few to show a significant drop in return on assets. The bank's ROA fell to 3.61% for the nine-month period ended Sept. 30, 1987, compared with 4.11% for the previous year, mainly as a result of changes in tax allowances for loan losses under the 1986 tax reform act, according to Mr. Sherwood.

He maintains that basic, bread-and-butter banking works for his institution. "We try to keep things simple.

BANKING TRENDS

Banks' Luster Reviving as Wall Street's Allure Fades

By DR. PAUL S. NADLER

BLACK MONDAY has changed a lot of our lives and a lot of our attitudes. The image of the Wall Street tiger with his red suspenders making corporate executives cringe before his utterances — even though the exec might be two decades older than the investment banker — has withered away.

Some of the Wall Street houses that only recently looked omnipotent and impenetrable have been shown to have weaknesses. And many of the people who had come to expect that they would always be in the privileged class have found that this was not to be.

In typical style, the press has summed it all up in the simple statement that "the yuppie has become the couch potato" — watching TV and wondering where all the glory went.

But as we reevaluate Wall Street and its role in society, several major ideas come to mind that are important for the rest of society.

Nadler Says:

Sure, brokerage and investment banking take skill, nerves, and a willingness to risk capital. But it is hard to believe that the skills of Wall Street people were so much better than those of people doing similar jobs in banks.

And we have to reevaluate how we got into a situation in which a small group of people have been paid so much more than the rest of us for doing a day's work.

Sure, brokerage and investment banking takes skill, nerves, and a willingness to risk capital. But it is hard to believe that the skills of Wall Street people were so much better than those of people doing similar jobs in banks and that these Wall Street people were entitled to salaries four to five times higher than what bankers were paid for their work.

Yet this was the case. And not everyone has gotten the word yet that these days are over.

A good friend of mine, president of a regional investment house, advertised for bank stock traders. He was amazed to find that even after Black Monday, applicants would come into his office and say, in all seriousness, "All I need is $500,000 a year to start work here."

And what is beginning to be revealed is that these high salaries in retail brokerage operations came out of the hides of the unsuspecting, trusting customers.

Everyone has his stories of how Wall Street worked before Black Monday. Some of mine include the following:

- A widow reported she had planned to raise her daughter using $140,000 from an insurance policy. Her broker, with a major firm of national stature, placed $80,000 in a tax shelter land deal that turned sour. She lost the $80,000.
- Another woman was placed into such an illiquid position that all of her

OVERVIEW

Official Signs of Economic Boom Are as Real as a Three-Dollar Bill

By H. ERICH HEINEMANN

AN UGLY RUMOR is floating around, probably fostered by a disaffected Democratic presidential candidate, that the American economy is on the verge of a boom. Employment is supposed to be surging. The shock of the October stock market crash has allegedly worn off.

If this were true, consumers would come streaming back to the stores. Some sectors in heavy industry are in fact running flat out, and a few companies are turning down export opportunities to accommodate long-standing domestic customers.

Doesn't that sound like a forecast of nice Republican weather? Well, it isn't. The U.S. economy is running close to the limit of its effective capacity at present. Should business activity turn out to be anywhere near as strong as the bulls believe, the Federal Reserve would be forced to hit the brakes just in time for the presidential campaign. Interest rates would soar, and if history is any guide, there would be a few new faces wandering around the White House.

Vice President George Bush can relax, at least as far as the economy is concerned. If Mr. Bush walks away with the Republican nomination, as now appears probable, he can look forward to remarkably sunny economic skies next fall.

Mr. Bush can count on his good friend Alan Greenspan, chairman of the Federal Reserve, to keep on pumping money into the economy right up through Election Day. Mr. Greenspan's prickly proclamation of Federal Reserve independence the other day was good camouflage for a typical election-year round of easy money.

The risk that the crunch in the stock market was a harbinger of a really serious economic downturn has always been minuscule. Business activity has certainly slowed down (consumer spending is already in hibernation). However, it is now an open question whether this adjustment will be officially classified as a recession.

Heinemann Says:

Most of the half million new jobs that the economy was reputed to have created in February were a statistical fiction.

Recent economic reports on employment and consumer borrowing appeared to suggest that a new boom is already under way. In fact, these statistics were about as genuine as a three-dollar bill. Most of the half million new jobs that the economy was reputed to have created in February were a statistical fiction — a flight of fancy, if such is possible, at the Bureau of Labor Statistics.

The New York Times, a leading journal of economic disinformation, reported in a large headline that consumer credit soared 36% during January. In the real world, by contrast, consum-

Overview: Page 22 ➡

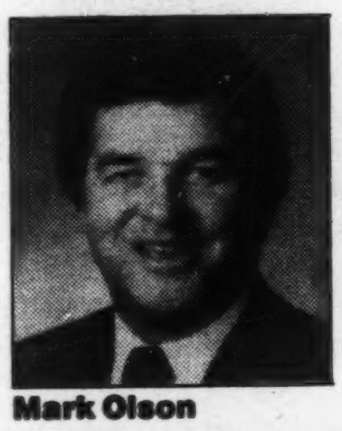
Mr. Heinemann is chief economist of Ladenburg, Thalmann & Co., an investment banking firm in New York.

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 22.

1. The Connecticut Department of Banking has filed suit in federal court against the First National Bank of Stamford and the Office of the Comptroller of the Currency. On what grounds does the state regulator hope to force the bank to give up its 18-month-old courier service that picks up customers' deposits?

2. Mark W. Olson, former president of the American Bankers Association, will soon leave his post as president and chief executive officer at Security State Bank of Fergus Falls, Minn., for a new position in Washington. Where will the 14-year banking veteran hang his hat after May 1?



Mark Olson

3. As the battle for control of Federated Department Stores continues between R.H. Macy & Co. and Campeau Corp., Macy's has named Citibank as third agent in a loan to finance its bid. What bank might finance Campeau's rival bid?

4. A 1975 suit brought by the state of California accused the Bank of America of violating the state's unclaimed property law. The suit claimed the bank withheld interest from inactive accounts and made little effort to locate account holders. Along with payments of $35.7 million, how did the bank finally settle the 13-year-old lawsuit?

Litigation

5. Analysts at Bear, Stearns & Co. have identified 15 banking companies that may be vulnerable to hostile takeover bids because of cheap stock prices and other attractions such as healthy fee income. Name the largest bank, which is also the only money center institution, on the Bear Stearns list.

6. The BuzzardCard, a recent entry in the affinity bank card markets, is a joint effort of AmeriTrust Corp., Cleveland, and a local FM radio station. What shared interest of consumers does this card hope to tap? (Hint: The card has neither wattles nor a beak.)

7. The $10.8 billion recapitalization for the Federal Savings and Loan Insurance Corp. falls short of even the most conservative estimate of the cost of putting the thrift industry back on its feet. Yet industry trade groups claim that the interest on that amount in bonds is all that member thrifts can support. How does Eugene Sherman, chief economist of the Federal Home Loan Bank of New York, respond to this claim?

8. Last year, South Africa was the dominant theme of socially motivated shareholder proxy resolutions at annual meetings of big banks. What issue is expected to take top billing this year, according to the Interfaith Center on Corporate Responsibility, the Council on Economic Priorities, and the Investor Responsibility Research Center Inc.?

9. The National Association of Realtors surveyed 3,200 households to determine whether the most important component of the good life is a happy marriage, owning a home, a car, a color TV set, or having a good job. Which factor came out on top?

— Robert Paul Molay

Community Banking: Filling a Niche Profitably

Fundamentals

➸ Continued from Page 1

We don't get wound up in a lot of fees," Mr. Sherwood says.

Approximately $17 million to $18 million of the bank's nearly $61.6 million in assets at the end of September were invested in tax-free municipal bonds, around $18 million in Government National Mortgage Association securities, and the balance in mortgages and some commercial and consumer loans, he says. Like many small, profitable community banks, the Stamford bank maintains a high capital level — 20% of assets.

At another top earner, the $174.5 million-asset Pioneer Trust Bank NA in Salem, Ore., "a compact, efficient operation" contributes to success, explains chairman Stuart Compton. "We've never been overambitious, and we're very conservative in lending.

"We don't take risks unless we know them. And we cross-train people so we can maintain extreme flexibility among personnel."

Pioneer, the sixth most profitable bank among the top 100 community banks according to the latest *American Banker* survey, posted a 2.95% ROA over the first nine months of last year, up from 2.3% for the full year in 1986.

About one-third of the bank's total assets are in loans, roughly $40 million in U.S. Treasury notes with maturities spread between one and four years, and the balance in tax-exempt instruments. "Our method of operations is that we don't fiddle around with securities. We will trade in that area, but no further," Mr. Compton says.

Caution in lending is important at another bank surveyed. "We're very careful about loans," says S.D. Hardin, president of McDowell County National Bank in Welch, W.Va. McDowell is the nation's third-ranked community bank, with a 3.46% return on assets. "I guess you'd have to call us conservative."

McDowell County, located in the heart of an economically depressed former coal-mining region, had little loan demand last year and did not extend any loans of more than $20,000. The bank keeps about half of its $101.6 million in assets in tax-free municipals and the other half mostly in government securities. Last year, Mr. Hardin said, McDowell paid out more than $1 million in dividends and plowed some $2 million back into capital, boosting its capital-to-asset ratio to nearly 25%.

One of the star performers among community banks turned out to be Bank of Horton, Kan. Horton went from a 0.89% return on assets in 1986 to 3.41% in 1987, with the rise largely driven by guaranteed student loan originations.

At one point last year, says Vance B. Norris, chairman and president of the bank, assets climbed to $150 million before dipping by some $80 million through sales of the loans in the secondary market.

BAN
Nº1
BANK
BA
C

The loans carry the current three-month Treasury bill rate plus 3.25% interest. "We had to turn business away. It became the tail that wagged the dog," Mr. Norris says. The bank has added 112 employees to the 39 it formerly employed, and this year plans to cope with rising volume by separating its regular fixed-rate residential real estate loan business from student loan originations.

According to "Bank Performance Report 1988," a recently released survey by Olson Research Associates of Greenbelt, Md., banks with more than $1 billion in assets suffered a slight decline in their average return on assets, to 0.81% in 1987 from 0.83% in 1986. Banks with less than $100 million in assets, on the other hand, boosted their ROA to an average 0.81% in 1987 from 0.69% in 1986, mainly as a result of improved credit quality.

"In terms of profitability, 1987 does represent a turnaround," says Kyle Duckers, regional representative with the consulting group. But he also noted that return on assets for small banks is still well below the 1981 levels of 1.14% and 1.13% in 1982.

Mr. Duckers cited three other developments that point to a healthier situation among small banks:

- The provision for loan losses as a percentage of total income fell to 5.5% last year from 7.3% the year before.
- Loan-loss reserves reached about two-thirds of nonperforming assets, compared with less than one-half in 1983 and one-third in 1982.
- Overhead in proportion to earning assets fell to 2.59%, the lowest level in 10 years. The percentage is based on noninterest expense minus noninterest income, divided by total earning assets and excluding provisions for loan losses.

In a separate study conducted last year by First Manhattan Consulting Group Inc., on behalf of the American Bankers Association, overall performance among community banks in no way differs significantly from other banking organizations with more assets. Roughly 25% of community banks showed a return on equity of 15% or better, while 75% were below that figure.

According to the Federal Deposit Insurance Corp., however, return on yearend assets for banks with $100 million or less in assets has slid steadily, from a high of 1.15% in 1980 to 0.51% in 1986.

"There's been lots of hooting and shouting about the farm and energy belts," said Hoyt E. Wilkinson, managing vice president and partner in First Manhattan's Santa Monica office.

"What we found was that there were banks in the Farm Belt that were doing neither better nor worse than banks elsewhere. Good management was the key.

"We've got an awful lot of banks, and we don't have an awful lot of good bankers. Community banks have had the same share of winners and losers as other banks."

Mr. Wilkinson said the figures also show "that banking is becoming a fairly freely competitive business where economies of scale are not significant. What is significant is skill. Some very large banks have proved vulnerable, while some small banks are thriving."■

Division for CPA Firms

Buttoned up.

Business changes fast these days. New laws. New regulations. New ways of doing things faster and better.

That's why the American Institute of CPAs recently adopted even higher professional standards.

And that's why more than 2,000 accounting firms all around the U.S. are also members of the AICPA Division for CPA Firms.

So they can learn from each other. And help each other stay "buttoned up"—up-to-date and in top form. As they've done for ten years.

This isn't something the government is making these firms do. There's no financial incentive either.

And this isn't just another organization accounting firms can join if they feel like it.

They have to earn their membership. By participating in a program of learning, growth and shared excellence. By making an honest effort of self-help and cooperation to uphold the highest quality control standards for accounting and auditing services.

So when you see this symbol displayed by one of our members, you'll know you're dealing with a firm that's striving to be the best it can be.

To learn more about the firms that earn this symbol, call 1-800-CPA-FIRM. In New York State call 212-575-6446.

Division for CPA Firms, American Institute of Certified Public Accountants, 1211 Avenue of the Americas, New York, NY 10036-8775

Source of data: ADP Data Services, New York, from its database of the federal regulatory reports of condition and income. **Community Bank:** As defined by American Banker, a community bank is an bank with Federal Deposit Insurance Corp. insurance that is independently owned, or owned by a one-bank holding company, and has assets between $50 million and $175 million on Sept. 30, 1987. **Returns on Average Assets and Average Equity Capital:** For 9/87, these ratios are calculated by annualizing net income for the first nine months of 1987 and dividing by average assets and average equity, respectively. The returns on average assets were calculated to three decimal places and then rounded to two decimal places. **The Efficiency Ratio** is net noninterest expense as a percentage of adjusted net interest income. It tells how much it costs the bank — in cents — to generate $1 of net interest income. **Deposit Growth Rate** shows the percentage change in deposits over the period Dec. 31, 1982, to Sept. 30, 1987. **Net Income Per Employee** is net income divided by the number of employees at the end of the period. To calculate net income per employee for 9/97, net income for the first 9 months of 1987 was annualized by multiplying it by 1.33. **(★)** — The bank is owned by a one-bank holding company.

Today

The hunt for investors to buy into troubled First RepublicBank Corp. is under way. The FDIC is looking for private investors who will take the company as is, while the Fed is looking for foreign investors. ________2

The precarious position of First Republic may convince regulators that merging troubled institutions into healthy ones is not a wise strategy. The case may be a warning to Texas thrift executives and regulators who have been championing a series of megamergers between strong and weak savings and loans. ________2

The psychological blow of First Republic's collapse is greater than its financial impact, some say. But the troubles at Texas financial institutions have reemphasized the continued weakness of the state's economy.__2

The complexity of trust accounting is leading many trust departments to license systems from outsiders or use service bureaus. A trio of vendors dominate the market for software and services — SEI Corp., Wayne, Pa.; National Computer Systems Inc., Minneapolis; and SunGard Trust Systems, Charlotte, N.C. ________3

IBJ Schroder Bank & Trust Co. is selling its venerable stock-transfer business to the Bank of New York. No official price was given, but industry sources said the business is being sold for well below $5 million, reflecting the high cost of operations, the low profits, and the inability to guarantee that customers will remain with the new transfer agent. ________5

Smith Breeden Associates dropped Franklin Savings Association as a client, despite the key role the consultant played in the thrift's spectacular rise. The consulting firm asserted that the Ottawa, Kan.-based thrift was gearing up to offer competing services through its subsidiaries. ____8

A hundred western thrifts are unduly exposed to interest rate risk, according to federal thrift regulators. They have been advised to use the current stable interest rate environment to reduce their use of short-term funds to invest in long-term assets.____ 24

COMMENT

Laws designed to protect companies from outside raiders more often allow mediocre or poor managements to maintain control and diminish the already meager power of stockholders, writes Dr. Paul S. Nadler. ____4

NEWS MONDAY

A number of community reinvestment measures are being discussed in Washington this week as congressional hearings focus on regulators' responsibilities. ________ 17

Worth Repeating

It's certainly a negative for the image of banking in Texas.

Ben F. Love, chairman of Texas Commerce Bancshares, Houston, commenting on the impact of the state's troubled financial institutions. [Page 2]

Chase Leads in Clearing House Business

94 Banks Generate at Least 1 Million Transactions in 1987

By JEFFREY KUTLER

NEW YORK — Competition is hotter than ever in the automated clearing house business, but it has not prevented Chase Manhattan Bank from maintaining its perennial lead in market share.

According to the *American Banker*'s third annual survey of automated clearing house activity, Chase was responsible for 68.2 million transactions last year. That equaled 13% of the 529 million items originated by financial institutions in the private sector.

Chase's closest rivals, Norwest Bank Minneapolis and Bank of America, each had private sector market shares of 3.3%.

Private sector volume accounted for 56.5% of the year's 936 million automated clearing house payments. The remaining 34.5% were federal government payments such as direct deposits of Social Security benefits into recipients' bank accounts.

Chase increased its originations by 23%, which did not keep pace with the overall market's expansion. The New York bank thus lost a point from its 1986 market share of 14%, indicating that more banks are becoming successful at selling direct deposit and payment services to their commercial and retail customers.

The number of banks that originated at least one million automated clearing house payments rose to 94 in 1987 from 81 in 1986. A minimum of 928,000 transactions were needed in 1987 to qualify for the *American Banker* listing of the top 100 originating banks, up 24% from 746,000 in 1986.

These figures, supplied in most cases by regional automated clearing houses, reflect interbank transactions only. By not including "on us" payments, such as direct payroll deposits into consumer accounts held by a paying company's bank, these statistics tend to understate actual payment volume.

Despite the wider and more crowded market, Chase's transaction total exceeded those of Norwest Bank Minneapolis and Bank of America by a factor of four, the same margin Chase enjoyed over Bank of America in 1986.

But there was an air of disappointment at the nation's third largest bank. "If anything, we would have liked to

Banks Take Big Share of Private Financing Market

By DAVID NEUSTADT

NEW YORK — Commercial banks grabbed 26% of the $135 billion private placement market in 1987, a significant improvement over previous years, according to data provided by IDD Information Services. Banks had an 18.6% market share in 1986 and a 9.5% share in 1985.

Commercial banks are aggressively pursuing private placement business as part of their push into investment banking.

Investment banks still dominate the fast-growing private placement business, which is the sale of securities not registered with the Securities and Ex-

BANKING TRENDS

Outlawing Raiders Is a Slap to Stockholders

By DR. PAUL S. NADLER

ONE DISTURBING TREND in the United States today is the rapid-fire ratification of state laws protecting management from corporate takeovers by outside raiders.

Basically, what these laws all say is that the corporation must be protected from someone coming in and buying out ownership, unless present management and a large number of shareholders agree that they like the idea.

What these laws are telling us in effect is that a corporation exists by itself and is the property of present management. We talk about corporate democracy and the right of people who have enough money to buy out a public venture. But in the states that have passed antitakeover laws, the purchase of a company's majority stock does not give the buyer the right to run the company, in most instances, unless present management wants it.

We are saying, then, that present management has the rights of a feudal lord. There is no way that it can be deposed — no matter how poorly the company is being run or how much better off the shareholders would be with new ownership and new blood — if present management does not want to relinquish its power.

Pretty Harsh? Not Really

At first, this view may appear pretty harsh. How could this possibly be even close to the truth in a democracy where the antitakeover laws have to be approved by elected officials? One would think that they would not like such legislation. But the exact opposite is the case.

Lawmakers go along with these bills almost to a person. And the amount of money raised to lobby for this type of legislation is tremendous. There are several reasons for this:

First, the stock buyers who attempt unfriendly takeovers are pictured as corporate raiders who are eager to move in, gut the corporation, fire its people, and sell the assets for far more than they paid for the company as a whole.

Look at the image of the corporate investors who buy the airline in the movie "Wall Street." The fact that they expect to make decent money by splitting the airline into its components and make it more efficient is scorned. The key is that the so-called good guys want to keep things as they are, with job levels as they are and management as it is.

Power Sways to Antitakeover Side

There's something even more important than the bad image we give to buyers of a company in a unfriendly takeover: The power structure in many states is heavily on the side of antitakeover measures as their lawmakers debate this type of legislation.

The governor of one state that recently passed an antitakeover law privately put it this way:

"Look at this bill. Sure it is hard on corporate democracy. But it is one of the rare times when both management and labor are on the same side. For both feel that if new management comes in they will lose jobs and power.

"Management fears being thrown out, and labor fears the dismantling of the company. On top of this, if we veto such legislation, management will simply move the headquarters of the corporation to another state with a friendlier legislative environment."

Now that Indiana's law on takeovers has been declared constitutional by the Supreme Court, it appears that nothing will stop the further development of state antitakeover laws. With the popularity of such legislation in each state, and each state's jealousy of its powers, it is highly unlikely that the Congress will pass a federal law that is less favorable to management.

Accountable to No One

The result is that in most instances where antitakeover laws have been passed, management is accountable to no one.

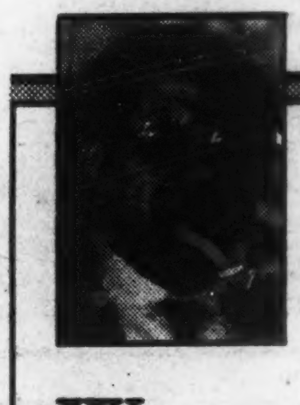
As one head of a major pension fund told me:

"If I have no rights and no assurance that I can help make this company better by changing its management, then why should I buy stock? If I want a junk investment, the least I will do is buy a junk bond, so that I am paid for the risk I am taking with my investment."

Will American institutional investors try to solve the problem by going overseas? Probably not, because the laws there are similar to ours or worse. And American insurance companies and pension funds are loyal citizens even if they are angry.

"When the Japanese call and ask if we want to invest in Japan," says the head of one major multibillion-dollar fund, "we answer that we will do so as soon as Japanese farmers riot in favor of having California fruits and vegetables brought into their country."

American investors still may turn away from equities as they see their powerlessness and the ability of mediocre management to keep control, no matter how low the stock price drops as a result of their managerial policies. If this happens, we are likely to see a dangerous long-term trend that will make us pay — and pay dearly — for the robbing of shareholders of their rights to buy a company and replace management with a better staff.



Nadler Says:

We are saying, then, that present management has the rights of a feudal lord. There is no way that it can be deposed — no matter how poorly the company is being run.

Corporations have been run by a triumvirate — government, management, and the shareholders. Of these three, the shareholders have been the test of the market mechanism — the people who decided if management was doing a good job.

'The Public Be Damned'

Little by little, this shareholder group is losing whatever power it did have, and it never was too much. So corporations will either become like those of the 1890s, in which the chief executive officer could say "the public be damned," and there was little anyone could do about it. Or else they will face more and more governmental intervention.

This will involve the government making more decisions on environmental activities, operating policies, and the like because government will be the only force left to control our feudal lords — the people who happened to be in charge of corporations when the antitakeover laws came into being and the opportunities to remove present management were sharply reduced.

The real question is, what is ownership? We have come a long way from the days when 64 men would invest in a sailing cargo ship and share the profits equally if it returned safely from the New World. Now we may reach the opposite point where the investor-owner has no rights. That would be like the captain of that ship saying on his return, "I will decide whether you get anything."

Some middle ground is necessary and undoubtedly in time it will have to be found. But in the meantime, let us hope that we do not do too much damage to the free enterprise system by protecting present management and present jobs, no matter how poorly the ship is run, while those who are willing to invest to make the ship more efficient are called raiders, cutthroats, and spoilers of our economic system. ■

Dr. Nadler is a professor of finance at Rutgers University's Graduate School of Management and is contributing editor of the *American Banker*.

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 8.

1. Consultants say it will be years before smart cards — plastic cards embedded with microcircuit chips — are ready for mass-marketing by the U.S. credit card industry. Despite the generally dim outlook, smart cards supplied by Micro Card Technologies Inc., Dallas, have established a significant beachhead with the U.S. Department of Agriculture in automating sales of a major farm commodity. For what crop — delectable to hogs and humans alike — is the smart card used to maintain sales records and establish production quotas?

Investment Banking

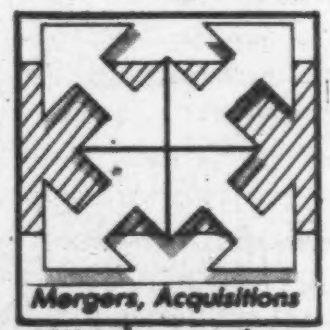
2. One of the latest wrinkles in the colorful idiom of financial services is a term borrowed from the French. The word ..... describes the smaller, independent investment banking firms organized in recent weeks by former Wall Street superstars, which concentrate on advisory work for mergers and acquisitions.

3. What recent marketing decision by American Express Co., concerning its Optima card, puts the company in an awkward competitive position with its bank partners?

4. Consumer advocacy groups — particularly Acorn, the Association of Community Organizations for Reform Now — have formulated a new lobbying strategy aimed at protecting traditional banking services for low-income and moderate-income customers. What fundamental banking issue, currently before Congress, will these groups seek to link with guarantees of free or low-cost checking for less-affluent individuals?

5. Departing from its tradition of disposing of loans from failed thrifts through sealed bids and negotiated transactions, what method will the Federal Savings and Loan Insurance Corp. use next month, for the first time, to sell $40 million in assets from defunct institutions in Tennessee and Ohio?

6. William J. Burke, senior vice president of the Bank of Ireland's New York office, spent a few hours last week basking in the limelight of international attention. What high honor did Mr. Burke receive?



7. Recent revelations suggest that the Federal Reserve Board in Washington overruled a lower regulatory agency when it approved the 1986 merger that created First RepublicBank Corp., Dallas, from InterFirst Corp. and RepublicBank Corp. Which regulator apparently foresaw that this merger would run into trouble?

8. As the New Jersey building boom continues, how have several large real estate developers sought to cash in on the financing end of the business?

9. On the same day the Federal Deposit Insurance Corp. was rescuing First RepublicBank, a welcome note of levity came in a speech by FDIC Chairman L. William Seidman that was transmitted to a bankers' convention in Honolulu. In Mr. Seidman's humorous predictions for the year 2000, what celebrity did he foresee entering a second term in the White House?

— Robert Paul Molay

Vendors Vie for Market Share at Fiduciary Operations Conference

The market for trust accounting software and services is dominated by a trio of specialized vendors — SEI Corp., National Computer Systems Inc., and SunGard Trust Systems.

Continued from Page 3

the pending Electronic Data Systems Corp. acquisition of MTech will enhance the deal. "Between them, EDS and MTech have over 5,000 banks, thrifts, and credit unions as customers," he said in an interview. "We want to leverage that customer base into asset management, trust accounting, and securities custody."

The SEI Conversion

SEI was entirely on Prime equipment originally. Realizing the capacity limitations of minicomputers, it began in 1984 to convert its host computers and its clients' systems to IBM in an expensive overhaul.

About 50 clients continue to run remotely on the Prime computers at the SEI data center. But D. Bruce Peterson, executive vice president for information services, said in a phone interview that they will be converted within three months.

"Then we will be completely finished with the retooling," he said. "We spent about $40 million moving the software, enhancing the software, and getting all the processing restructured for IBM."

The changeover affected SEI earnings and client relationships. "The conversion did not go absolutely smoothly," said Ms. Frey of National Computer. "As a result, we picked up a number of SEI customers."

Trust-Aid, SEI's original trust accounting product, was introduced in 1972. The dwindling number of clients with Prime minis still use it.

The IBM system, Trust-Aid 3000, was introduced in 1983. The biggest trust departments using it are at Wells Fargo Bank, San Francisco; First RepublicBank, Dallas; Marine Midland Bank, Buffalo; First Interstate Bank of California, Los Angeles; and Manufacturers National Bank, Detroit.

In 1982, the company also introduced Trustpac/PC, software for community banks. It runs on IBM PCs. About 55 banks license it.

At its Wayne center, SEI has an IBM 3090 Model 400 and two IBM 3084s, one of them added this year. "We saw a rather dramatic growth in our client demand in December as a fallout of the October market," Mr. Peterson said. "There was about a 25% increase in transaction load."

A total 3,856 banks and thrifts exercised trust powers at the end of 1986, the latest tally available. Mr. Peterson said SEI's market is about 1,600 and it has about a third of that target.

"We see our competitors collectively have a third or maybe 40%," he said. "The remainder are on what I'll call obsolete environments or in-house systems."

Kenneth R. Adams, president of SunGard Trust Systems, says the main difference between his operation and SEI is that a SunGard bank is not on line to SunGard all day long. "It has enough information in the bank to operate on a daily basis," he said in a phone interview. "That makes our system considerably cheaper than theirs."

Rather than being on line in real time, the client has a PC or a network of PCs with a file server, which is the working data base of account information, transaction history, and asset holdings.

"Those are mini files of our main data base in Charlotte," Mr. Adams said.

"Each day they enter transactions on their microcomputer and they are stored in the micro. Each evening our large computer in Charlotte dials each of these micros and retrieves the transactions for the day, whether buys, sells, name or address changes, or beneficiary changes," he said. "It processes them against the master file here, and sends back updated transactions to the mini data base in the bank and generates summary reports in their offices overnight.

"So during the day they are not connected by phone. They have an inhouse computer system that can answer their needs and inquiries and enter posting transactions. All their assets are priced weekly. We do all that service work for them," Mr. Adams said.

The clients can use IBM PC ATs or the new IBM PC/2. Mr. Adams said SunGard has installed about 100 of the latter. It runs IBM software at its Charlotte data center but the mainframe, although SunGard is an IBM dealer, is a National Semiconductor 8043, an IBM look-alike.

In trust accounting, SEI and National Computer Systems illustrate starkly the competition between service bureaus and in-house software vendors.

More than 500 banks run National Computer's Trustware systems inhouse. Most use Digital Equipment Corp. VAX minicomputers. Some use Texas Instruments 990 minicomputers. To meet the needs of small banks, the company also has a system to run on the IBM PC AT.

Dennis M. Stanzione, National Computer's director of special projects, said 40 to 50 SEI customers have switched to his company's system in recent years, partly because their trust departments have grown.

"Once you reach a certain size, service bureau becomes a costly operation," he said in a phone interview.

"In our environment, once you install a system, it doesn't matter how many accounts you run on it. Some of our banks run 20,000 accounts. In a service bureau, it would be impractical to deal with those volumes." ■

Commercial Banks Take Larger Share Of Growing Private Placement Market

Continued from Page 1

change Commission to a limited number of investors. The Federal Reserve Board allowed commercial banks to enter the market in 1977, but for many years, bank efforts were sporadic and produced uneven results.

However, over the last three years, a number of banks have created special private placement units and hired experienced personnel from Wall Street and from insurance companies, the major investors in private transactions.

"We see them having an increasing market share," said Jack Cartland, a vice president of private finance at Aetna Life and Casualty Co. "Of the 20 largest sources of private deals, three to four years ago they may have been 85% investment banks. Now they are 55% to 60% commercial banks."

"Commercial banks scare me a lot more than the other investment banking houses," said a private placement professional at a leading Wall Street firm.

Private placement activity is especially attractive to banks because it does not involve use of their own capital. Since the only investment for banks is salaries, profits can be quite high.

Fees can range from one-eight of a percent on a large, simple deal, such as a certificate of deposit, to as much as one percent on a smaller, more complex transaction.

Bankers Trust at No. 7

Bankers Trust New York Corp. did best among the commercial banks in 1987, attaining the No. 7 slot on IDD's league table. That is the highest position a commercial bank has attained so far on that list. In 1986, Citicorp held the No. 7 spot, but it fell back to 11 in 1987. J.P. Morgan & Co. achieved the second best performance among commercial banks, placing No. 10 on the overall list.

Other banks among the top 30 private placement agents were Chemical New York Corp. at No. 14; First Chicago Corp., 15; Chase Manhattan Corp., 17; Security Pacific Corp., 18; BankAmerica Corp., 19; Manufacturers Hanover Corp., 22; and Bank of Boston Corp., 29.

The private placement market has become increasingly complex over the last few years. It now includes many new types of securities, such as mortgage-backed bonds. That has resulted in disputes, especially between commercial banks and investment banks, over what should or should not be counted as a private placement. In response to that, IDD has developed separate listings for different sectors of the market.

Commercial banks are strongest in the asset-backed category, which includes securities backed by both mortgages and securities. Commercial banks as a group had slightly over a third of that market sector. Bankers Trust ranked No. 3 on the list, followed by Citicorp, No. 4, and Chase Manhattan, No. 9.

Commercial banks are also strong in the private certificate of deposit market, with about a 30% share. Bankers Trust was 3d, Citicorp 4th, and Chemical Bank 5th on that list.

On the plain-vanilla list, which includes old-fashioned private placements, Bankers Trust is 9th, First Chicago 11th, and Citicorp 12th.

For lease-related transactions, Bankers Trust was 5th, Citicorp 10th, and BankAmerica 12th.

Commercial banks were weakest in acquisition-related deals. J.P. Morgan is 5th on that list, Bankers Trust 9th, and Chemical Bank 11th. ■

Gain Control Over Your CMO and MBS Operations and CMO Bond Administration with CDS Software.

REMIC / CMO Processing

Worried about the latest wrinkle in CMO issues? CDS' REMIC / CMO System can help. Developed and installed for some of the nation's premier trustees, this system lets you automate most of the functions associated with acting as trustee for CMO and REMIC issues without the pain of lengthy and costly systems development. It handles unlimited numbers of issues, tranches and collateral pieces.

You can specify, without reprogramming, the attributes of the issue, the tranches, and the collateral. The system takes over from there. It will enable you to control collections for agency securities, loans and loan pools — individually or by certificate groups.

- Quickly and accurately calculates bond values for closings, payments, and monthly special redemptions.
- Determines tranche payments — on time with speed, accuracy, and flexibility.
- Reduces your clerical requirements and saves you money by accepting automated input for collateral descriptions, principal factors, and P & I payments.

Pass-Through Bonds

You don't need CMO processing but you still want to handle mortgage pass-throughs? Then consider CDS' Pass-Through System. Using the same high degree of automation as all of our systems, it will aid in the effective management of your P & I collections.

- Calculates the payments to the bondholders.
- Provides the necessary reports you need.
- Works for other types of assets in addition to mortgages.

MBS Collections

GNMA collections out of control? CDS' Mortgage-Backed Securities Collections System currently manages P & I collections on billions of dollars worth of mortgage-backeds. It automatically processes GNMA Is, GNMA IIs, GPMs, FNMAs and FHLMCs. Interfaced with your primary securities accounting system, it will let you balance to the penny with the HUD sheets.

- Tracks receivables and payables.
- Generates claim letters and checks.
- Produces your G/L transactions.
- Provides a variety of options for crediting cash to your customers' accounts.

You need never again be the object of a penalty interest claim.

Mortgage Custody and Warehousing

Stacks of boxes and piles of papers everywhere you look? And you have to wade through all of it in order to produce a statement for your customer? You can tame this monster with CDS' Mortgage Inventory Custody System. It's already controlling hundreds of thousands of loan files.

- Eliminates audit exceptions.
- Satisfies your customers' requirements.

The Mortgage Funding System is a great way to handle processing of P & I payments from the master servicers. In fact, you only have to enter the curtailments, prepayments, and foreclosures (hopefully by mag tape). The system automatically handles the rest.

All of CDS' on-line, multi-user systems are unlimited in capacity. They can be used separately or together in any combination. They'll give you the flexibility you demand. Now you can automate your MBS operation any way you want and probably in ways you never thought possible.

We're proud of our reputation. And we want your business. Call now and learn more about gaining maximum control over your securities operation.

Chase Leads the Pack in Automated Clearing House Business

Continued from Page 1

have grown faster last year," said James J. Hopes, vice president of Chase Manhattan and president of Chase ACH Inc., its clearing house subsidiary.

Chase clearly has no intention of letting up on the competition, and not just in the part of the market where it is strongest — processing direct premium payments for large insurance companies. Chase is also making a strong bid for the emerging point-of-sale debit business. Its clients include Exxon Co. U.S.A. and Mobil Oil Corp., which began accepting automated clearing house debits from consumers last year.

Nor is Chase neglecting opportunities in direct deposits, which are known as automated clearing house credits. The bank's volume of credits grew 31% last year, compared with only 22% for debits.

Chase is coming close to challenging Bank of America as the top originator of private sector credits. But in debits alone, as well as in total transactions (debits and credits added together), Chase remains pretty much alone at the top.

Norwest, the flagship bank of Norwest Corp., rose two places in 1987 to edge out Bank of America for runner-up. Norwest's lead was a mere 257,000 items, 1.5% of the bank's total, but it caused the most obvious of several noticeable changes on the top 100 list.

Six Banks Doubled Volume

The First National Bank of Atlanta increased its total volume 110% on the year, enough to raise it to 10th on the list from 26th a year earlier. It was one of six banks that doubled its annual volume. Five others, including Norwest, showed increases of between 80% and 100%.

Chemical Bank, New York, climbed eight places to No. 12, with a 47% volume increase. Connecticut National Bank, Hartford, rode a 37% increase into 13th place, up from 18th. Security Pacific National Bank, Los Angeles, added 60% to its volume, sufficient for a 15th-place finish after being 24th in 1986.

There were losers, too. Volume slipped at 9 of the top 100 banks, though in most cases by relatively small amounts and for explainable reasons. Some of these banks lost accounts to competitors. Others consolidated operations in another part of a holding company.

Wells Fargo Bank, Morgan Guaranty Trust Co., Manufacturers Hanover Trust Co., Connecticut Bank and Trust Co., and Norwest Bank Nebraska all fell out of the top 20 because they failed to keep up with the market's growth.

But the success stories are numerous enough to lend credence to claims by the National Automated Clearing House Association that stepped-up promotional campaigns will lead to rapid transaction growth after years of disappointments.

In rising from fourth place to second, jumping over Bank of America and Mellon Bank in the process, Norwest had an 82% spurt in transaction volume. Norwest's debit entries — payments initiated by a seller to move money out of a buyer's account — doubled to 14 million. Only Chase generated more debit volume — four times more.

Among Norwest's debit customers is

Consultancy Drops Franklin Savings

Continued from Page 8

out the approaches.

Last week, in a joint statement with Smith Breeden, Mr. Fleischer said: "Franklin has benefited substantially from our relationship with Smith Breeden. I will continue to encourage clients of our investment banking affiliates needing the types of services rendered by Smith Breeden to employ that firm."

A Staff of Its Own

Franklin, meanwhile, has developed a formidable investment research staff of its own over the past several months. Several thrift industry executives and analysts theorize that Franklin will likely be able to carry out its strategies without Smith Breeden.

Headed by John Scowcroft, former research chief of Merrill Lynch Mortgage Capital, the research team already has 15 members, including alumni of Goldman Sachs & Co. and First Boston Corp. and a systems expert from IBM. This team, based near Smith Breeden's office in Overland Park, is expected to grow to 40 people by year-end, and additional research is performed at Franklin's Ottawa headquarters.

"Over the years, Franklin has built a staff that can internally handle the same services Smith Breeden was providing," said Michael Zuk, an analyst with George K. Baum & Co., Kansas City.

All the same, Mr. Fleischer said Franklin would actively seek another outside adviser to perform "oversight research responsibility." ■

Introducing the first comprehensive and updated management reference available in the area of bank operations.

Bank Operations Management Service

BANK OPERATIONS MANAGEMENT SERVICE
WG&L

The practical operations management guidance you need for all the major operating areas!

As the bank operations officer, you are the focal point of your institution's drive for automation, increased productivity, greater efficiency, and reduced costs. You need practical, state-of-the-art information in these areas…and now you can get it in one unique resource.

Bank Operations Management Service gives you the operations and management guidance you need to achieve your short-term goals as well as to plan wisely for long-range operations requirements in the numerous and different areas that comprise bank operations.

Comprehensive coverage of 7 different areas all in one convenient looseleaf binder.

Bank Operations Management Service covers all the major areas within bank operations, grouping them into 7 sections that represent the primary areas of daily concern to you. You'll find comprehensive sections on:
- consumer banking
- commercial banking
- trust banking
- deposit operations
- administrative operations
- financial control
- regulatory compliance

Each section consists of stand-alone chapters designed as "how-to" guides written by banking industry experts. This means that you gain the experience of experts who have encountered the same operating questions that you face.

Will remain continuously up-to-date in this fast-changing area…and build into an operations library!

Bank Operations Management Service will be updated three times every year. You'll receive both new chapters that cover brand-new developments within the 7 major topical areas and updated chapters replacing existing materials. Plus, the **Service's** looseleaf format enables you to add these updates to the original 25 chapters to create one comprehensive, up-to-date master reference on bank operations.

In cooperation with Peat Marwick Main & Co. *and* leading banks throughout the industry

Payment System Gains Ground, but Progress Is Slow

By JEFFREY KUTLER

NEW YORK — Later this year, probably in October, the automated clearing house network will achieve a first: It will handle its billionth transaction in a single year.

The paperless payments will still be outnumbered almost 50 to 1 by the checks they were designed to replace. Therefore, passing the billion mark only begins to suggest the system's unrealized potential.

But after a decade and a half of struggle, bankers active in the automated clearing house movement can cheer that they are having some impact on the nation's modes of payment.

Only six years ago, when checks written in the United States were approaching 40 billion annually, the automated clearing house network was plodding along at only 315 million items per year. Almost two-thirds of them were federal payments — direct deposits of government salaries, Social Security, and other retirement benefits. Without the government transactions and Federal Reserve System subsidies, the automated clearing houses would have quickly faded into oblivion.

Last year, the network reached 936 million transactions, according to the National Automated Clearing House Association. At the current growth rate, the 1988 total will exceed 1.2 billion.

By most estimates, checks are growing 5% to 7% a year and will probably close in on 50 billion this year.

But the automated clearing house system — consisting of 29 regional clearing houses, most operated by the Federal Reserve, and 13 other bank-owned corporations or cooperatives — has grown at or close to 25% annually throughout the 1980s.

ACH Volume

In 1987 (millions of transactions)

	% of Total	Volume	% Incr. '86-'87
Private sector	56.5	528.6	40.7
Government	43.5	407.4	34.5
Total	**100.0**	**936.0**	**37.9**

Source: National Automated Clearing House Association

System Holds Its Own

National Automated Clearing House Association figures showed a 38% growth rate for 1987. Comparing the 1987 total with a different 1986 statistic compiled by the *American Banker* lowers that increase to 26%, closer to those of previous years. Either way, the system is holding its own, gradually answering past criticisms about lackluster performance if not entirely silencing its critics.

"Any way you look at the figures, it is disappointing that ACH volume after all these years is only approaching one billion, while checks keep mounting up," said George C. White, president of White Papers Inc., Montclair, N.J., and one of the more persistent critics. White Papers is a payments systems consulting firm.

By the national association's reckoning, as transactions last year rose 38%, government payments increased 35%, private sector activity grew 41%, and dollar volume jumped 57%. The average commercial transaction amount was $6,390, the average government payment $628, and the average for all transactions $3,882.

"Dramatic growth occurred because of a general, across-the-board acceptance and belief in the benefits provided by ACH services," said William R. Moroney, president of the Washington-based association, which is holding its annual conference this week in Dallas.

"All types of ACH payments are growing, and we can expect to see this growth continue as we move into the 1990s," Mr. Moroney said.

Changing Transaction Mix

If the payment system really has turned the corner, then the supporting evidence is found in a reversal of the historical government-commercial transaction mix.

Banks and other depository institutions generated 56.5% of the 1987 automated clearing house volume. That was up from 54% in 1986, the first year in the history of the system in which private sector payments outnumbered government items. Commercial (nongovernment) volume includes direct payroll deposits, insurance premiums, preauthorized loan payments, cash managers' consolidations of funds in regional bank accounts, and point-of-sale payments by consumers.

The last category, a new one for the automated clearing houses, accounted for 7.5 million transactions last year — less than 1% of the total, but the start of what could become something big. The National Automated Clearing House Association is promoting the network as an alternative to the on-line electronic networks that bankers built for automated teller machines and are now diversifying into point-of-sale payments.

Accessibility Outweighs Delays

Many bankers prefer the immediate transfers of funds that on-line systems afford, as compared with the one- or two-day settlement delay in automated clearing house payments. But to automated clearing house boosters, the system's easy accessibility and lower transaction costs outweigh the time disadvantage. And consumers, accustomed to a few days of float when they pay with checks or credit cards, may actually like it better.

Most of the 7.5 million point-of-sale transactions through the automated clearing houses last year were in Arizona. There the statewide check-clearing house, which also runs the automated clearing house, has been operating a successful off-line point-of-sale system for several years called the Cactus Switch.

Two national gasoline retailers, Exxon and Mobil, are also beginning to accept direct debits from customers' bank accounts via the automated clearing houses. Such retailer-owned systems may become more numerous following revisions last year to the Federal Reserve Board's Regulation E, which make it easier for nonbanks to participate in electronic funds transfer networks. ■

Chase Leads the Pack in Automated Clearing House Business

→ Continued from Page 19

Deluxe Check Printers Inc., a bank stationery company based in St. Paul. When bank customers order checks, Deluxe gets paid by debiting their accounts via the automated clearing house.

"We had some major customers that came on the ACH at the end of 1986, and they were up to full capacity for all of 1987," said Carol Daniels, assistant vice president of the Minnesota bank, the nation's 81st largest when ranked by deposits.

On-Us Items Would Boost Rating

Ms. Daniels said that if on-us items were included in Norwest's tally, along with the automated clearing house activity of affiliated Norwest banks in other states, its volume would have been close to 28 million. That would give it a much more solid second place behind Chase.

The same argument could be made by other regional and superregional bank holding companies.

On-us activity combined with Seattle-First National Bank's volume would have given its parent, BankAmerica Corp., a similar boost. Excluding the 20% of transactions that don't leave the bank, Bank of America ranked third overall but first in credit entries, which include payrolls and other direct deposits.

For purposes of the *American Banker* survey, holding company affiliates were kept separate and on-us items excluded whenever possible.

The top 100 listing therefore reflects the success of individual banks selling automated clearing house services to major corporate clients and their customers. But interstate holding companies such as First Union Corp. in the Southeast and Banc One Corp. in the Midwest project the image of single organizations. While Banc One's lead subsidiary, Bank One Columbus, rose two places to eighth in 1987, even that strong showing may not tell Banc One's complete marketing story.

There were other shifts among the top 10. Northern Trust Co., Chicago, increased 36% to 11.9 million items and jumped to fifth place from sixth. It traded ranks with Marine Bank of Springfield, Ill., the nation's 477th largest bank and the biggest overachiever in the automated clearing house business.

The $531 million-deposit Marine Bank ranked fifth in both 1986 and 1985 on the strength of its processing debit payments for insurance companies.

Citibank Makes Gains

Marine Bank's automated clearing house leadership has contrasted with poor showings by Citibank, the nation's largest bank. But Citibank is shedding that image. The New York institution increased its clearing house volume 60% in 1987 and rose to 25th place from 36th. Of its 4 million transactions, 3.3 million were credit entries, making Citibank the eighth largest originator of automated clearing house credits.

First National Bank of Boston was another gainer among the top 10, rising one place to seventh with a 36% volume increase to 8.5 million. Three-fourths of those entries were credits and most of the growth came from marketing to corporations, a bank spokesman said.

Ninth and 10th positions were occupied by Wachovia Bank and Trust Co. and the First National Bank of Atlanta, which are both part of the First Wachovia holding company. Together their volume exceeded that of Mellon Bank, which was fourth on the list.

The biggest percentage gainer, at 189%, was AmSouth Bank, Birmingham, Ala., the nation's 63rd largest commercial bank but now the 18th largest in automated clearing house transactions. Its total rose to 4.6 million from 1.6 million in 1986, then good enough for only 59th place.

Almost all of AmSouth's transactions are on the debit side. "We signed some new clients, but most of our gains came from existing clients in the insurance industry," said Jeff Taylor, the bank's automated clearing house product manager. "For those companies we converted preauthorized paper drafts to ACH debits." In pursuing those accounts, AmSouth competed several times against Marine Bank of Springfield.

"Our goal is to become one of the top ACH processors in the country, if that's possible for an Alabama bank," Mr. Taylor said. "Most of our business so far has been in-state, and we may have to go outside for more growth."

AmSouth's spectacular rise is reminiscent of the 145% growth between 1985 and 1986 of M&I Marshall & Ilsley Bank, Milwaukee. In 1986, it jumped to 15th place from 39th, mainly as the result of a big debit contract with Northwestern Mutual Life Insurance Co.

M&I, the 181st largest in deposits, climbed another rung in 1987, to 14th, as its automated clearing house volume grew 21% to 5 million.

The 1987 merger of two financially troubled Texas companies, RepublicBank Corp. and InterFirst Corp., brought together several affiliates with a combined volume approaching 10 million. Treated as one bank, First RepublicBank Corp. would have been seventh in terms of automated clearing house volume.

Instead, it had three entries among the top 100 and its lead bank, First RepublicBank Dallas, was listed twice because the RepublicBank and InterFirst automated clearing house systems had not yet merged. The former RepublicBank operation registered a 41% gain in its annual volume and ranked 39th. ■

THE OPTIMA CARD
Is It Taking Your Best Customers?

Since its introduction, the Optima Card from American Express has steadily gained market share nationwide.

Who are the Optima card owners? How large and how fast is the card base growing? Is Optima replacing bank cards? Do cardholders think Optima is a better (or more prestigious) card than bank cards? Are bank card issuers losing their best customers to Optima?

Brittain Associates, Inc. is conducting a quarterly tracking study that addresses these questions and more. The benchmark study is now available to subscribers. Call today for complete details.

Most transaction data were supplied to *American Banker* by regional automated clearing houses on behalf of member financial institutions. In some instances, data were confirmed by or obtained directly from Federal Reserve Banks or from the originating banks. Totals for some banks are annualized based on partial-year results.

NA-Where debit and credit breakdowns are not given, information sources had not tabulated them in time for publication.

*Some banks' rankings for 1986 may be slightly different from those published in the American Banker listing of March 17, 1987. They were retabulated based on revisions and corrections received after the publication date. Banks without a number in this column were not included in the 1986 survey.

2 South Carolina Thrifts Agree on Merger Terms

COLUMBIA, S.C. — South Carolina Federal Corp. and First Federal Savings Bank, Rock Hill, S.C., have announced an agreement in principle to merge the two institutions.

Under terms of the agreement, First Federal's assets will be acquired and its liabilities assumed by South Carolina Federal Savings Bank, the wholly owned subsidiary of South Carolina Federal Corp.

The merger is subject to approval by the board of directors of both institutions as well as by regulatory authorities.

First Federal Savings Bank of Rock Hill has total assets of approximately $186 million. The merger will boost South Carolina Federal's total assets to more than $900 million, with 30 full-service branch locations and six mortgage loan offices in South Carolina. ■

Georgia Thrift to Sell Branch

ATLANTA — First Federal Savings and Loan Association, Bainbridge, Ga., will acquire Fulton Federal Savings and Loan Association's branch in Cairo, Ga.

The Cairo office had deposits of approximately $16.5 million as of Dec. 31.

Fulton Federal, Georgia's largest publicly owned thrift institution with assets of approximately $2.4 billion, operates 42 branches throughout the state. ■

SPECIAL REPORT

American Banker

SAVE OUR SCHOOLS

Will there be enough educated workers in the year 2000 to fill the nearly one million new jobs that are expected to open in financial services? With an estimated 17 million to 21 million functional illiterates in the country today, there is reason for concern — and reason for action.

To assess the problem and what is being done about it, a 44-page special report examines the state of education in the United States and how the coporate world, and banks in particular, are responding. The section starts on page 11.

Today

COMMENT

A new set of economic indicators devised by the Fed can produce profoundly misleading messages, writes H. Erich Heinemann. ______6

Random Thoughts

By SANFORD ROSE

It is by now almost commonplace to observe that banks aren't getting paid for the loan risks they are assuming. Bank managers know this, and so does the general marketplace, which heavily discounts bank stock prices.

Yet the magnitude of the compensation shortfall is not fully appreciated. Loan Pricing Corp. of New York has attempted to shed light on the problem by assembling some suggestive and disquieting numbers.

The firm has gathered spread data on some 3,100 C&I loans made by 30 banks. The data show spreads over the 30-day Libor rate on a potpourri of credit extensions for six risk classes of customers, ranging from class 1, an excellent business credit with minimal risk, to class 6, an unacceptable or substandard business credit. Data are available for the all-in spread, which takes into account the raw spread, fees, balances, and utilization rates, as well as for certain components of the all-in figure.

Focusing on all-in spreads can be misleading because of wide differ-

Lenders Take Steps to Protect Yields Under Risk-Based Capital Regulations

By JOHN P. FORDE

CORPORATE FINANCE

AN AMERICAN BANKER WEEKLY FEATURE

Section begins on page 8

NEW YORK — When risk-adjusted capital rules become effective, many bank lenders expect their commercial borrowers to drive a hard bargain if they are asked to negotiate new terms on existing loans.

Most new bank credit agreements, including revolving loans of over a year in maturity and standby letters of credit, are being written to include provisions that would compensate the lender for any reduction in yield due to the new risk-adjusted capital requirements.

"This provides a repricing mechanism — the bank will have an opportunity to renegotiate with the borrower to maintain their yield," said one banker.

David Bartsch, a senior vice president in the loan syndication department of Irving Trust Co. here, said in a recent interview that the provisions have become standard in many credit agreements with large banks. They are showing up in letters of credit and in loan agreements "as an event for which there would have to be a renegotiation of pricing," he said.

The risk-adjusted guidelines were recently proposed by regulators in the U.S. and other major countries. They propose to apply different grades of risk to various bank assets both on and off the balance sheet.

These grades of risk would determine how much primary capital the bank would have to set aside to offset potential losses on the asset. Primary capital includes common stock, loan-loss reserves, and certain forms of debt

Deposits Rise In Southeast, New England

Fewer Banks in Southwest, West Make Top 300 Listing

By L. MICHAEL CACACE

NEW YORK — Southeastern and New England banks have posted impressive gains in their share of deposits in the past five years at the expense of banks in the Southwest and the West, a regional breakdown of the top 300 banks reveals.

Substantially more banks from the Mid-Atlantic, the Southeast, New England, and the Midwest are in the top 300 than in 1982, while banks in the Southwest have dropped from the listing at a rapid rate.

The major factors contributing to these shifts were the weak economy of the Southwest; problems incurred by the western region's largest bank, Bank of America; and industry deregulation and changes in state banking laws. Such laws have led to the formation of superregional banking firms and spurred the growth of special-purpose banks.

These are some of the findings from the *American Banker's* annual survey of the nation's top 300 banks. Data for the survey are taken from this newspaper's

Deposits: Page 62 ➸

Regional Share
Top 300 Banks' Deposits

	1987	1982
Mid-Atlantic	43.7%	43.2%
Midwest	14.2	14.5
Southeast	13.4	7.9
West	18.1	23.6
Southwest	4.5	7.3

RANDOM THOUGHTS

➜ Continued from Page 1

ences in utilization rates. Thus, banks make an all-in spread of 219 basis points from their best customers (risk class 1). But this spread is inflated because such customers utilize only 18% of their lines. In effect, high-grade borrowers rely on their banks only for insurance purposes.

Of greater significance are the spreads for customers with average or greater risks (classes 3 to 6), who utilize between 62% and 75% of the money they contract for. The range of all-in spreads earned from these borrowers is incredibly narrow. Banks typically make 202 basis points from their average customers and not a great deal more from their poorer customers — 235 basis points from "special mention" borrowers, those with only marginally acceptable business credit, and 232 basis points from the very worst customers, those that are plainly classified as substandard or less.

The fact that compensation actually declines as we move from special-mention to clearly substandard borrowers reflects the banker recognition that you can't get "blood out of a stone." At this extreme level of risk, lenders are so concerned about recapturing principal that they dare not impose additional borrowing costs. As partial compensation for their risk, they will try getting collateral or they will tighten covenants.

□ □ □

Another way of gauging the adequacy of bank compensation for risk is by comparing the raw loan spread earned from various classes of borrowers with the yields demanded by the bond market from the same type of customer. Loan Pricing Corp. arranged seven corporate bond ratings (triple A to CAA) into the equivalent of its six risk classes of corporate loans.

It then computed the spread over treasuries of comparable duration for bonds in each class. Finally, it converted these long-term spreads into 30-day Libor spreads by using the swap rates prevailing in the marketplace as of mid-February.

The result facilitates a comparison between the risk premia charged by bondholders and those charged by banks. Raw bank spreads over 30-day Libor range from around 100 basis points for the best customers (risk class 1) to approximately 200 basis points for the worst borrowers (risk class 6). The inclusion of fees and balances does not materially alter this range. By contrast, bond spreads to the same customers range from approximately zero for the least risky to a whopping 496 basis points over 30-day Libor for the most risky.

At the low end of the risk spectrum (risk classes 1 and 2), banks charge a higher spread than does the bond market. But this relationship quickly reverses. Average risk customers (risk class 3), for example, pay 164 basis points over 30-day Libor for bank credit but 343 basis points over that rate for bond credit.

And at the top of the risk spectrum (class 6), the premium gap is yawning. The poorest risks pay nearly 300 basis points more for bond credit than for bank credit.

These findings suggest that banks are poor discriminators of risk. They overcharge their best (least risky) customers, thereby encouraging them to seek funds elsewhere. At the same time, they grossly undercharge the rest of their customers, and the extent of the undercharge is progressive. Average-risk customers pay less than they should, and high-risk customers pay a pittance, relative, that is, to what an impersonal bond market would exact.

□ □ □

Of course, it is sometimes argued that comparisons of bank and bond charges are invalid. Banks, it is held, maintain rigorous oversight of borrower balance sheets, while bondholders do not. Therefore banks should be willing to surrender yield in order to retain their role as proactive monitors.

This argument would carry considerable weight if bank oversight of borrower balance sheets resulted in reduced defaults. Yet in the recent time period, bank loan losses have exceeded bond defaults, leading one to conclude that the yield-oversight tradeoff has been ineffectual. Banks clearly would have earned higher ROAs if they had charged as much as bondholders and simultaneously circumscribed their monitoring activities.

Indeed, it is impossible to review the Loan Pricing Corp. data without concluding that banks are in the wrong business. Instead of taking on so many marginal loan customers, they should lend only to the highest-quality borrowers. And they should use their capacity to raise below-market deposits in order to invest in a portfolio of corporate bonds.

Large loan losses stem from overconcentrated, underdiversified portfolios. Loan portfolios are hard to diversify. But it is rather easy to diversify a bond portfolio so as to avoid undue concentration on credits from any one industry or geographic area.

Bankers recoil at the thought of using FDIC-advantaged deposits to buy a diversified portfolio of corporate bonds — an idea that seems to threaten their raison d'etre. Yet considered from a rational rather than an emotional viewpoint, the tactic is not without merit. Choosing bonds over loans may be the key to raising risk-adjusted yields and thereby lifting those anemic bank stock valuations.

□ □ □

Some miscellaneous gleanings from other data presented by Loan Pricing Corp. at its recently held loan pricing school: In some 25% of industries, prices are systematically either above or below average. Thus, borrowers in metal cans, wine & brandy, and paper mills pay lower-than-average prices, leading to lower all-in bank spreads. By the same token, borrowers in such industries as chemicals, radio broadcasting, and nursing care pay above-average prices, leading to fatter bank spreads.

Charges are not the same in every part of the country, although the geographic price gap is diminishing. Still, West Coast borrowers pay more for loans than borrowers in, say, the Midwest.

Term loans have higher spreads than revolvers. Pricing increases with the maturity of the loan, but not a lot (on average 3 basis points per year).

Pricing for middle-market C&I loans is, as expected, composed of spreads and fees. Yet fees are not as widespread as many believe. Some 23% of loans have upfront fees averaging 67 basis points, and 16% of loans have commitment fees averaging 35 basis points. Annual fees are still rarer: only 8% of loans carry these charges, which average 54 basis points.

Nine-tenths of the loans made to companies with annual sales of less than $20 million carry a prime-based charge. Low-risk small companies pay an average of prime plus 50 basis points. Average-risk small borrowers pay prime plus 94 basis points, and high-risk small customers average prime plus 131 basis points.

For bigger borrowers — those with annual sales of over $250 million — Libor-based pricing is the rule (70% of loans); prime-based pricing survives for only 20% of loans. For those that still pay a prime-based charge, the price step-up is as follows: Low-risk large borrowers pay prime plus 9 basis points; average-risk customers pay prime plus 53 basis points, and high-risk big borrowers are charged prime plus 90 basis points. ■

WHAT'S YOUR ANSWER?

Former Employee Loses Age Discrimination Suit

By CHARLES G. DALEY

Can a former employee challenge the release of his claims against the bank for wrongful discharge and age discrimination if he failed to return the severance and termination pay received for signing the release?

NO. Almost two years after Dwight R. Burt, a former employee of Peoples Bank & Trust Co., signed a release agreement with the bank, he filed a complaint with a Michigan court.

He alleged that he had worked for the bank from 1955 until November 1980, eventually becoming a vice president. On Aug. 15, 1980, he was placed on a three-month probation for alleged poor work performance. On Nov. 18, 1980, Mr. Burt was informed by a senior vice president that he was being terminated because of customer dissatisfaction. He was given a release to sign that was prepared by the bank.

After consulting his counsel, he signed the release agreement, which provided, in part, that the bank pay Mr. Burt $16,500 as severance and termination pay for all services he rendered to the bank. In exchange for this payment, he agreed to release the bank from all claims arising out of his separation of employment with the bank.

Mr. Burt's suit made two arguments in an attempt to avoid the release. First, he contended the severance pay was needed to support his family. He thus had no choice but to sign the release. He said this was done under economic duress. Second, he claimed that there was an unwritten bank policy that substantial severance pay based upon the number of years of employment would be given to employees upon their termination with the bank without signing a release.

Mr. Burt also showed that the $16,500 severance pay he received in consideration for the release was approximately 25 weeks salary for 25 years of employment. Thus, he argued that he was otherwise entitled to the severance pay that was purported to be the consideration for the release. He contended that there was no true consideration for his release agreement. The Court of Appeals of Michigan disagreed with Mr. Burt's arguments. (Burt v. Peoples Bank & Trust Co., 390 N.W. (2) 172, 1986).

The court noted that Mr. Burt failed to tender back any of the money he received in exchange for the release. The court held that Mr. Burt's suit was barred. ■

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1987, and various state banking departments. Deposits for 1987 may not be comparable with deposits reported for 1986 and 1982 deposits because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. For large banks, equity capital also includes the cumulative foreign currency translation adjustments. **(a)**— Formerly First National Bank. Changed title on Dec. 31, 1987. **(b)**— Formerly United Virginia Bank. Changed title on Sept. 1, 1987. **N.A.**— Not available.

Top 300 U.S. Commercial Banks in Deposits

In Order of Deposits December 31, 1987, Compared with December 31, 1986, and December 31, 1982
Compiled Annually Since 1921 by the American Banker

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1987, and various state banking departments. Deposits for 1987 may not be comparable with deposits reported for 1986 and 1982 deposits because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. For large banks, equity capital also includes the cumulative foreign currency translation adjustments. **(a)**— Formerly Citizens DeKalb Bank, Clarkston, Ga. Changed title in April 1986 and changed location in Feb. 1987. **(b)**— Formerly Commerce Union Bank. Changed title on Oct. 31, 1987. **(c)**— On Feb. 8, 1988, bank merged with Old National Bank, Spokane, to form U.S. Bank of Washington NA. **(d)**— Formerly Norstar Bank of Long Island. Changed title Sept.19, 1987. **(e)**— Formerly Allied Bank of Texas. Changed title Jan. 29, 1988. **(f)**— Formerly Home Federal Bank FSB. Converted to a commercial bank charter on July 27, 1987. **N.A.**— Not available. **( )**— Indicates negative equity capital.

Top 300 U.S. Commercial Banks in Deposits

In Order of Deposits December 31, 1987, Compared with December 31, 1986, and December 31, 1982
Compiled Annually Since 1921 by the American Banker

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1987, and various state banking departments. Deposits for 1987 may not be comparable with deposits reported for 1986 and 1982 deposits because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **Equity capital** is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves. For large banks, equity capital also includes the cumulative foreign currency translation adjustments. **(a)**— On Feb. 8, 1988, bank merged with Peoples National Bank, Seattle, to form U.S. Bank of Washington NA, Seattle. **(b)**— Formerly National Bank of Georgia. Changed title on Nov. 2, 1987. **(c)**— Converted from a national to state charter on July 2, 1987. **(d)**— Former MBank USA. Changed title on Nov. 1, 1987. **(e)**— Converted from a mutua savings bank charter to a commercial bank charter on Dec. 22, 198

Data Sources: American Banker questionnaire, Federal regulatory report of condition for Dec. 31, 1987, and various state banking departments. Assets for 1987 may not be comparable with assets reported for 1986 because of mergers or changes in accounting principals. With respect to mergers, American Banker follows the bank of charter in determining the surviving bank. **(a)**— Formerly First National Bank. Changed title on Dec. 31, 1987. **(b)**— Formerly United Virginia Bank. Changed title on Sept. 1, 1987.

Deposits in Southeast, New England Gain over Five-Year Period

→ Continued from Page 1

data base.

During the period studied, from yearend 1982 to yearend 1987, the economy of the Southwest was severely weakened by a sharp drop in oil prices. Banks in the region — comprising Colorado, Louisiana, New Mexico, Oklahoma, Texas, and Utah — experienced problems with energy-related and real estate loan portfolios. As a result, the region's representation among the top 300 commercial banks fell to 28 banks in 1987 from 44 in 1982.

Banks based in Oklahoma and Texas were especially hard hit. Twelve of the 16 southwestern banks that dropped out of the listing were from these states — nine from Texas and three from Oklahoma. Last year, only 15 Texas banks and two Oklahoma banks ranked among the top 300 commercial banks in deposits. As a result, the Southwest banks' share of the top 300 banks' total deposits fell to 4.5% in 1987 from 7.3% in 1982.

The share of deposits held by western banks was greatly affected by the problems of Bank America, San Francisco. Bank of America's deposits fell by $24.8 billion, or 26%, from $95 billion in 1982, when it ranked as the nation's top deposit-taking institution, to $70.2 billion last year, when it ranked second. Thus, over the five-year period, the aggregate deposits of the large banks in this region rose by only 5%, and the share of deposits in the West fell to 18.1% from 23.6%.

Bank deregulation helped create new large banks in the Southeast. For example, two Charlotte, N.C.-based superregional banking firms — the $28.9 billion-asset NCNB Corp. and the $27.6 billion-asset First Union Corp. — moved across state lines to establish large commercial bank subsidiaries in Florida and Georgia.

Top Banks, by Region

Number of banks in top 300

	1987	1982	Change
Mid-Atlantic	99	93	+6
Midwest	58	56	+2
Southeast	57	52	+5
West	38	39	−1
Southwest	28	44	−16
New England	20	16	+4

Source: American Banker

In 1982, NCNB acquired Gulf Stream Banks Inc., Boca Raton, Fla., and merged Gulf Stream's small bank subsidiaries into one — a $737 million-deposit bank called Gulf Stream Bank NA, Boca Raton. Since 1982, NCNB has used the bank to consolidate its Florida acquisitions: Exchange Bancorp. Inc., Tampa, in 1982; Ellis Banking Corp., Bradenton, in 1984; and Pan American Banks Inc., Miami, in 1985. The bank — now called NCNB National Bank of Florida, Tampa — is Florida's second largest and the nation's 41st largest with deposits of $6.8 billion on Dec. 31.

In March 1986, First Union acquired the $41 million-deposit Citizens DeKalb Bank, Clarkston, Ga. Later that year, First Union acquired Georgia State Bankshares Inc. and First Railroad & Banking Company of Georgia. Last year, the subsidiary banks of these companies were merged into Citizens DeKalb to form $3.2 billion-deposit First Union National Bank, Atlanta, the state's fourth largest and the nation's 101st largest.

Over the five-year period, the Southeast's representation in the top 300 rose by five banks to 57. And the southeastern banks' share of the top 300 banks' deposits increased substantially to 13.4% in 1987 from 7.9% in 1982.

While a weak economy caused the demise of many top banks in the Southwest, a strong economy and deregulation helped make New England banks larger. Deposits acquired through merger helped First National Bank, Boston, increase its deposits 55% over the period to $17 billion, as it moved up to 12th position from 17th place. Acquisitions also helped Bank of New England NA, Boston, post a 227% increase in deposits, as it moved to 25th place with $9.4 billion in deposits, up from 61st place five years earlier.

The region also was home to the fastest growing bank in the top 300 over the past five years, Boston Safe Deposit & Trust Co. The bank's deposits increased more than 26-fold between yearend 1982, when it ranked 400th in deposits with $430 million, and yearend 1987, when it ranked 20th with $11.4 billion in deposits.

The bank began offering money market deposit accounts for Shearson/-American Express clients in 1983. Corresponding with the increase in deposit-taking was an expansion of high net worth personal loans, including mortgage loans, to the company's existing trust clients and other customers in New England. Among banks and bank holding companies, Boston Safe was the 16th most profitable in the nation last year, earning $135.7 million, up 15.2% from 1986 when it ranked as the 34th most profitable banking firm.

New England Banks Move Up

New England banks increased their representation among the top 300 banks, to 20 banks last year from 16 banks in 1982. And New England banks held 6.1% of the top 300 banks' deposits at yearend, compared with 3.5% in 1982.

Changes in state banking laws were also a factor in the increase in the number of large banks in the Mid-Atlantic region. For example, the state of Delaware passed the Financial Center Development Act of 1981, which permitted out-of-state banking firms to enter Delaware and establish commercial bank subsidiaries. Today, six banks established under the act rank among the top 300 in the nation, and Delaware has doubled its representation in the top 300 to 10 banks in 1987.

The six banks established under the 1981 act that rank among the top 300 are Bank of New York (Delaware), Wilmington, at 174th with $1.9 billion in deposits on Dec. 31; Manufacturers Hanover Bank (Delaware), Wilmington, at 216th with $1.44 billion in deposits; Chase Manhattan Bank (USA) NA, Wilmington, 227th with $1.38 billion; Morgan Bank (Delaware), Wilmington, 239th with $1.3 billion; Maryland Bank NA, Newark, 268th with $1.1 billion; and Lomas Bank USA, Wilmington, 289th with $1.0 billion.

Delaware was also the home of the fastest growing bank in the top 300 last year. Bank of New York (Delaware) — a special-purpose subsidiary of Bank of New York Co. that was established on Dec. 31, 1983 — posted a ninefold increase in deposits. It moved to 174th with $1.9 billion in deposits, compared with $217.3 million in deposits and a ranking of 1,055th at yearend 1986. The bank handles credit card operations for the Bank of New York Co.

A special-purpose bank, as defined for survey purposes, has a commercial bank charter, but it makes few or no commercial loans. In most cases, the bank is used by its parent company to handle particular functions, such as credit card operations, and to take advantage of higher usury ceilings and tax benefits.

Banks in the Mid-Atlantic states increased their representation among the top 300 to 99 banks last year from 93 banks in 1982. The banks in the region held 43.7% of the top 300 banks' deposits at yearend 1987, compared with 43.2% five years ealier.

In the heart of the Midwest, changes in Missouri's banking law with respect to "facilities" — the state's equivalent of branches — caused a spate of mergers as multibank holding companies in Missouri consolidated. In 1983, banks were permitted to acquire facilities within the same county. In 1984, the law allowed banks that merged to keep their existing facilities and include the acquired bank as a facility as well. And in 1985, the law permitted the establishment of facilities in adjacent counties. Last year, nine Missouri banks ranked among the top 300, compared with six in 1982.

Deposit growth in the Midwest, however, was dampened by the problems of Continental Illinois National Bank and Trust Company of Chicago. Continental's deposits fell 31% over five years to $19.7 billion at yearend 1987. It now ranks as the nation's 11th largest bank, down from seventh place in 1982. As a result, although the Midwest increased its representation among the top 300 from 56 banks in 1982 to 58 banks last year, its share of deposits fell to 14.2% last year from 14.5% in 1982.

Banks in the Mid-Atlantic states increased their representation to 99 banks in the top 300 last year from 93 in 1982. These banks now hold 43.7% of the top 300 banks' deposits, compared with 43.2% in 1982. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our rankings of commercial banks meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

Supervisors Group Accredits Indiana

WASHINGTON — Indiana's Department of Financial Institutions last week became the 11th state banking department to be accredited by the Conference of State Bank Supervisors, a national trade association.

The conference began a program in December 1984 to assure that all state banking departments adhere to supervisory and regulatory standards. The group's goal is to prove that states are capable of handling expanded responsibilities, as financial services companies gain new powers.

The two-phase accreditation process takes about four months, according to association vice president Joseph E. Jones. The first phase is a self-evaluation by the state banking agency, followed by a review by the conference's performance standards committee.

Several states are working toward certification, trying to improve their performance or their statutory authority, Mr. Jones said. At least two states have advanced to the second stage, he said. ■

Prudential Pulls Plug on Loan Securitization Unit

By ANDREW ALBERT

NEW YORK — Prudential Insurance Cos. of America has ended its financial commitment to Dryden Guaranty Corp., a subsidiary that planned to employ its financial guarantees to securitize commercial loans.

The move was seen as a potential setback for the asset sales field. But Dryden's chief executive officer, Tim Freestone, said he has been contacted by outside institutions that might want to invest in his venture.

Prudential provided Dryden with $100 million in capital. The insurance company based in Newark, N.J., decided earlier this month that it no longer wanted to be in the financial-guarantee business, according to Edward Baird, a vice president of enterprise planning.

"We want to make sure we are putting our capital and other resources into our core business — and it was becoming increasingly clear that [Dryden] was not part of that core," Mr. Baird said in a telephone interview. Dryden was incorporated as a subsidiary in late 1985.

Prudential recently announced that it lost $164 million in 1987. The company notified Dryden's 25 employees last week that it would no longer support the subsidiary.

Some of those employees are expected to be reassigned to other parts of the parent company. Dryden will be officially dissolved as a subsidiary on April 8.

Dryden ran into repeated delays in attempting to complete its first transaction, and eventually its parent company lost patience. "They are still very much in the developmental phase," Mr. Baird said.

Mr. Freestone estimated that his unit, after paring, would need an investment of about $3 million to keep it operating for the remainder of 1988.

By the end of the year, the unit would need a capital infusion equal to the $100 million that had been furnished by Prudential.

Mr. Freestone said six banks had shown a keen interest in securitizing their assets through Dryden — evidenced by their willingness to provide Dryden with detailed data about loans to be sold. ■

Recent Government Assistance Raises Fears of Intervention

By ROBERT TRIGAUX
Washington Bureau

News Monday begins on page 19

Washington Briefing

Blanket guarantees to the depositors and creditors of Dallas-based First RepublicBank Corp.'s 73 banks and to California's American Savings and Loan Association have revived fears of government intervention in the financial industry.

But no one seems sure what to do about it.

A few things are sure, according to banking observers.

First, the number of banks generally believed to be "too big to fail" has grown to more than two dozen, while the size of such banks is declining and is now in the $20 billion-asset range. After the $4.5 billion government rescue of $41 billion-asset Continental Illinois Corp. in 1984, it was generally believed that only the dozen largest banks could generate risk to the industry as a wholeand were judged too big to fail.

"We know from First Republic that the TBTF [too big to fail] size is down to the $30 billions, and I'd estimate it is

FDIC Will Try to Recover Its Expenses In Some Cases of Open-Bank Assistance

By RICHARD RINGER
Midwest Bureau

CHICAGO — The Federal Deposit Insurance Corp. will seek, in some instances, refunds on the money it disburses to banks to keep them from failing.

The payback will be made either when an FDIC-assisted bank is sold or after the bank's capital level has been restored to a higher level.

The FDIC confirmed last week that it would institute refund procedures. An agency spokesman, Alan J. Whitney, said the FDIC is negotiating refund contracts with two banks in the Southwest that have reached an agreement in principle to obtain open-bank assistance. The contracts could be completed in the next few months, he said.

The refund provision is not included in the assistance package arranged for First City Bancorporation of Texas, Houston, or in the FDIC's agreement to provide assistance to First RepublicBank Corp., Dallas.

The refund procedure would allow the FDIC to share in the future profits or resale of banks that are given financial assistance under the agency's open-bank program.

The FDIC began the program of contributing funds to banks in danger of failing as a less costly alternative to liquidating the assets of a failed bank.

Not all banks that obtain open-bank assistance will be required to make the refunds. And the amount to be repaid will be determined on a case-by-case basis, Mr. Whitney said.

Last year, the FDIC approved nine assistance transactions that included 19 banks. So far this year, it has arranged seven transactions involving eight banks.

Morgan's Role In Merger Pits It Against Client

Customer Is Angered; A Thorny Issue for Bank

By JED HOROWITZ

CORPORATE FINANCE

NEW YORK — In a new twist on a continually knotty issue, Morgan Guaranty Trust Co. is helping one client buy a firm that another Morgan client agreed to purchase.

A spokeswoman for SmithKline Beckman Corp., the Philadelphia pharmaceutical giant, confirmed that Morgan is financial adviser and dealer-manager on its $32-per-share bid to buy International Clinical Laboratories Inc.

The rub is that Corning Glass Works — a long-time Morgan customer — announced a definitive agreement two weeks earlier to buy the Nashville-based laboratory services company for $26 a share. And it hired the New York bank as its exchange agent on the deal.

Corning officials were surprised by the rival bid and outraged by Morgan's role. They learned of the tender offer last Thursday, through newspaper notices that identified Morgan as dealer-manager.

"You can imagine what it might be," said Stephen Albertalli, director of investor relations at the upstate New York manufacturer, when asked for a reaction. "I just don't use four-letter words over the phone."

Mr. Albertalli would not comment on whether the bank would sever its relationships with Morgan, which he described as one of Corning's "major banks for many years." Corning has a revolving credit line and other facilities with Morgan, he said.

Whatever the outcome of Corning's

Peru Approves Debt Swaps

LIMA — Peru approved a $94 million debt-for-products swap with Chase Manhattan Bank that is said to be the biggest yet reached with a foreign commercial bank. Chase is Peru's largest foreign bank creditor with exposure of more than $200 million. The deal announced last week covers Chase's working capital loans to Peruvian banks and does not include medium- and long-term syndicated credits. Chase Trade Inc., the bank's trading company, will market the goods obtained in the swap.

Peruvian officials also approved a $59 million debt-for-products swap with a Czechoslovakian bank. Similar deals are being worked out with American Express Bank and the First National Bank of Maryland.

Citicorp Securities Unit Fires 17

NEW YORK — Vickers da Costa Securities, Citibank's New York-based broker of international equities, has fired 17 staff members in research, sales, and operations. Earlier this year Vickers disbanded its trading desk. Firings occurred in the last two weeks. The 68 people remaining at the firm will concentrate on selling research related to overseas markets, a spokesman said.

After the October stock market crash, Citibank increased its stake in the New York broker to 100% from 4.9%, forcing it to curb plans to be a market-maker in the United States for overseas stocks. The Glass-Steagall Act prohibits banks from acting as a principal in dealing equities.

Two Oklahoma Banks Fail

WASHINGTON — The nation's bank failure total stood at 43 on Friday after two banks were closed in Oklahoma. Century Bank, Tulsa, failed on March 24. The Fourth National Bank of Tulsa stepped in and assumed $69.4 million in 13,800 of the failed bank's deposit accounts. Cashion Community Bank, Cashion, also failed. Its $6.4 million in deposits were assumed by Community State Bank, a newly chartered subsidiary of Warrior Bank Corp., also of Cashion. With these two failures, five banks have been closed in Oklahoma in 1988.

Oregon Thrifts to Merge

HILLSBORO, Ore. — Washington Federal Savings Bank, with $197 million in assets, has reached an agreement to acquire Oregon Pioneer Savings and Loan Association, Portland, which has $159 million in assets. The cash deal could cost Washington Federal up to $7.6 million.

— Compiled by Dennis P. O'Connell

Correction

As of Dec. 31, 1987, Bank Leumi Trust Co., New York, had total deposits of $2,625,936,000, making it the 128th largest bank in the United States and the 21st largest in New York State. The bank's deposits rose 0.4% last year.

In the listing of the top 300 banks in the United States [March 22, pages 45-54], the wrong deposit figure was stated for Bank Leumi. As a result, the bank's ranking was understated for both the nation and New York State. In addition, the bank was incorrectly listed among banks with deposit losses last year. ■

Irving Bank Must Detail Its Options, Analysts Say

Without a White Knight, Stock Price Could Go Below Bank of New York's Offer

By GORDON MATTHEWS

NEW YORK — Irving Bank Corp. must quickly offer specific details about its alternatives to an acquisition by Bank of New York Co. or its stock price may again fall below the offer now being made by its Wall Street rival, according to banking industry securities analysts.

"It's only reasonable to assume there will be further announcements over the next week or so making clear what they are doing," said Lawrence W. Cohn, money center banking analyst for the Merrill Lynch Capital Markets Group. "If not, the stock will drift back down under the offering price, to Bank of New York's advantage."

Irving sparked a sharp advance in its stock last week when it informed the Securities and Exchange Commission it was in preliminary discussions with third parties about choices other than a combination with Bank of New York, which is currently waging a proxy contest for control of Irving.

The Schedule 14D-9 disclosure to the SEC last Thursday prompted Irving's stock price to jump $6.625, closing at $66.25 on volume of nearly 1.4 million shares. Bank of New York is currently offering $60 per share in cash and stock for Irving.

The analysts could offer no guesses about likely friendly bidders for Irving. "I really have difficulty figuring out who it could be," said James H. Wooden, the principal analyst for Shearson Lehman Hutton Inc., New York.

Involvement by major Japanese banks was viewed a remote possibility by James L. Winchester, an analyst at Mabon Nugent & Co., New York. "I think the corporate cultures at the Japanese banks and at Irving are probably very dissimilar," he said.

"The rumors are interesting, and analysts can certainly be surprised, but I don't have a clue as to who it would be," said Thomas K. Brown, banking analyst at Smith Barney, Harris Upham & Co., New York.

Irving's statement to the SEC did not say it had a friendly bidder. The statement said the company was in negotiations to explore options and listed them as a merger or reorganization, a deal involving the securities or assets of the company, a tender offer, or a revamp-

CIRRUS members are about to make history with

There's never been a better time to join the CIRRUS System than right now.

CIRRUS network members are about to enjoy a big boost to their automated banking programs. Because during July and August, the "Money, Money Everywhere" Sweepstakes will have cardholders everywhere looking for, and using, ATMs that display the CIRRUS symbol. It's the *largest international ATM network consumer sweepstakes ever*, and it's going to make every CIRRUS member a winner!

- We're picking up the tab for our members with *FREE* statement stuffers and point-of-purchase materials.
- We're entering your customers automatically every time they make an approved financial transaction at an ATM with a CIRRUS mark.
- We're offering your customers exciting cash and travel prizes.
- We're supporting the program internationally with over 200,000,000 print advertising impressions in U.S. and Canadian media.

As the world's largest ATM network, we know that when our members succeed, so do we. Which is why we provide outstanding marketing support like this — year after year.

If you're a CIRRUS member, we know you're looking forward to the July 1st start date. And if you're not yet a member, you still have time to join the leader and introduce CIRRUS to your customers in a *very* big way. To give yourself the competitive advantage of CIRRUS membership, just give Henry Mundt, Senior Vice President, CIRRUS System, Inc. a call at 1-312-960-9070.

BANKING TRENDS

Housing Is No Longer a Risk-Free Investment

By DR. PAUL S. NADLER

HOW CAN MY CLIENTS buy homes when they don't go up in price steadily? There is no other way they can afford them." This was the complaint of a real estate agent at a bank meeting I participated in recently.

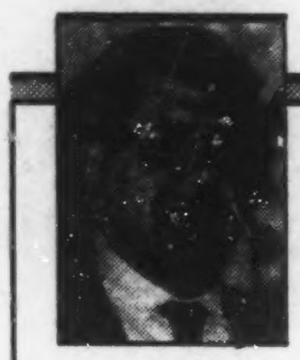
There was a general feeling among the real estate agents and others connected with the building industry that something is radically wrong when houses drop in price or even remain static in value. In the past, virtually everything a property buyer purchased went up in price and vindicated the investment and borrowing of the funds.

At first, one can look at this type of thinking and laugh. Everything else goes down in value as time passes. Cars wear out. We wear out. Why should housing keep rising in value year after year?

There are several answers to this.

First, we have had tax laws that encouraged people to go into debt to buy houses; the government ate up a large part of the carrying charges.

Second, we had a financial structure that kept interest rates artificially low, so that savers were penalized to reward borrowers — even though in many cases the borrower was far richer than the saver. It always annoyed me that savers were given artificially low rates under Regulation Q — even though many were hardworking people who set aside just $10 or $20 a week — while the borrowers, who often bought the expensive home in the suburbs, could get a low interest rate — and a tax-deductible one, too!



Nadler Says:

Housing cannot be a fair-haired boy forever. Laws, low interest rates, and inflation will not protect housing from the basic fact that every other industry knows: Prices can go down as well as up.

Third, because of cheap money and the expectation that housing would always go up in value, we had a self-fulfilling prophecy — people would buy houses instead of renting them; families would split, with unmarried children buying a home instead of sharing a home with their parents; and many people would buy houses for speculative reasons and rent them to others. It was always a case of "don't sit with rent receipts. Buy a home and watch it rise in value."

Deregulation Ends Subsidization

What changed all this?

We have seen that deregulation has altered our financial structure. Today, in real, after-inflation terms, interest rates are higher. The saver has become tired of subsidizing the borrower. As Reg Q tried to maintain this subsidization, the saver often left a bank or thrift and went to a money fund, where he could get a going return on his funds. Banks and thrifts thus had to get the laws changed to allow the saver to get a decent return with them, or else watch the demise of our deposit-type financial institutions.

So money now costs a lot more to borrow on an after-inflation basis than it did before. And those who counted on the rise in the value of property to far more than offset the carrying costs have been proven sadly out of date.

We have also seen sheer economics hurt home investors. People who lost their jobs in the Oil Patch or because of changes on Wall Street no longer could afford to carry two or three houses. Their selling led to a decline in house prices that fed upon itself, just as the rise fed upon itself. Speculators had seen price advances and rushed to get on board, pushing prices up even faster. In like manner, their recent sales, following early price declines, pushed prices down even further.

What we have learned, then, is that housing cannot be a fair-haired boy forever. Laws, low interest rates, and inflation will not protect housing from the basic fact that every other industry knows: Prices can go down as well as up.

And it is not just in housing that we have finally realized this. Many business people also criticized inflation but lived on its benefits.

It was nice to know that whatever inventory you bought, it would always go up in value over time if you couldn't sell it right away. And it was nice to lend money with the same knowledge that inflation would bail out any bad lending decision.

Now we see that inflation is no longer our safety net. The cost of carrying inventory, houses, factories, and the like often exceeds any rise in value of the property, and in some areas we have seen tangible asset values fall markedly.

Inflation Not Inevitable

What has to be realized is that inflation is not an inevitable state of affairs in our nation. This is something that people who entered the world of finance in the past 10 years, when inflation reached 18½% a year, sometimes forget.

Our high inflation stemmed from several factors:

- Staggering rises in energy prices.
- Heavily mandated spending in environmental areas.
- A feeling in all sectors of, "I believe in free enterprise, just keep out the lousy competition." This led to steady wage and price increases as all of us lived under protection from market decisions.
- Finally, we had the heavy budget deficits that had to be financed in part by creating new money.

Now, three of the four are gone. Energy prices are stable — they even fell. Environmental spending has stabilized. Deregulation and the attitude seen in the firing of the air traffic controllers have made all prices and wages more sensitive to the dictates of the marketplace.

The budget deficit remains. But because of our luck in having foreigners finance much of it with their dollar surpluses, it has not been enough of a factor to lead to continued rampant inflation.

So today, if we look to inflation to bail us out of investments in hard goods and especially real estate, we are fighting the last war. We are operating under the assumption that prices will always rise rapidly enough to more than compensate us for the cost of financing the purchases we have made. This is an assumption that we can no longer accept with impunity.

So how do we respond to the real estate agent who says: "How can anyone afford to buy a house if it doesn't go up in value enough to offset the cost of financing it?"

We have to answer that maybe in housing we have finally come to our senses and recognized that if you can't afford it, you can't have it — something we have always known in other areas.

Housing has long been our favored sector. We have made money available for housing in good years and bad, through tax benefits, interest rate subsidization, and various government programs. The result was, as some observers have put it, "We have new houses and old factories, Japan has old houses and new factories."

And what we have now learned is that, basically, the efficient factories and service facilities are prerequisites for being able to afford the new houses.

It may be tough on real estate agents, home buyers, and investors to see housing join the rest of our funds outlets as an investment that does not have guaranteed profitability. But it is a fact of life that can be forgotten only at the peril of those who buy the homes and those who lend the money to pay for them. ■

Dr. Nadler is a professor of finance at Rutgers University's Graduate School of Management and is contributing editor of the *American Banker*.

OVERVIEW

Greenspan's Tight Money May Hurt Bush

By H. ERICH HEINEMANN

WALL STREET is not a happy place at the moment. Prices of common stocks, bonds, and the dollar have all crumbled under the weight of vaguely defined worries that all is not well with the world. The source of the malaise was not hard to find: renewed tight money.

Unless Federal Reserve Chairman Alan Greenspan relents soon, Vice President George Bush can look forward to an uphill struggle for the White House in the fall.

During the winter, Mr. Greenspan pegged short-term interest rates at roughly 6.5%. However, the demand for credit has weakened — far more than the money managers at the central bank assumed.

Reports last week of higher gross national product and increased personal consumption were illusory. In fact, GNP this winter appears to have run at a rate slightly below that of the fourth quarter; the threat of recession has not been erased.

To prevent interest rates from falling, the Federal Reserve has had to reinstate the monetary freeze it imposed on the U.S. economy during most of 1987. In retrospect, tight money appears to have been the single most important cause of the stock market crash on Oct. 19.

Preliminary data suggest that total bank reserves — the raw material that fuels the money supply — will average about $58.5 billion in March. If that estimate is correct, the annual growth rate of total reserves over the last 10 months was only two-tenths of one percent. By contrast, during 1986, total reserves jumped by more than 20%.

The 20% growth rate in total reserves during 1986 was far, far too high. If continued, it certainly would have unleashed powerful inflationary forces. By the same token, a growth rate of two-tenths of one percent is much too low to sustain the economic expansion. The crack in the stock market last October was ample testimony to that conclusion.

The U.S. dollar is very unlikely to post sustained declines in the face of the substantial improvement in the U.S. merchandise trade deficit that is currently under way. However, if the Fed sets off on a quixotic mission to "defend" the dollar (presumably against the forces of evil that lurk above the ozone layer), monetary growth would drop to even lower levels. The threat of a serious recession would increase.

Vice President Bush can rest easy. The Fed would only shut down the economy if Mr. Greenspan had secretly signed on as *agent provocateur* for the Democratic National Committee. But that certainly is NOT the case.

Wrong Time for Tight Money

The Fed's shift back to tight money appears to have been inadvertent. Even so, irrespective of whether Mr. Greenspan and his colleagues intended to tighten, another round of monetary restraint and a sharp downturn in business are the last things the U.S. needs just now.

Despite a lot of happy but careless talk about renewed vigor in total

Acquiring Banks are listed in geographic order, with their respective deposit ranks for Dec. 31, 1987, shown in the left-hand column. Acquired banks are listed by date of acquisition. If several acquisitions occur on the same date, banks are listed geographically by city, and within a city, alphabetically. Unless otherwise noted, deposits shown are as of Dec. 31, 1986, and are for the acquired bank. **(d)**— Merged under the charter of Peconic Bank and title and location of Norstar Bank of Long Island Hempstead. **(e)**— Deposits are for Peconic Bank, the acquiring bank. **(f)**— Bank acquired First RepublicBank Post Oak NA, Houston, on Sept. 24. **N.A.**— Not available. **(†)**— Deposits are for 6/30/87. **(‡)**— Deposits are for 6/30/86. **Data sources:** American Banker survey data and the Federal Reserve Board's monthly G 4.5 Report: "Changes in Status of Banks and Branches."

Deposit Growth at Top Banks Increasingly Comes from Mergers

By KENNETH J. HICKS

NEW YORK — Deposit growth through mergers and acquisitions continued to rise among the largest commercial banks in 1987, according to an *American Banker* survey.

Acquired deposits made up more than three-quarters of the total deposit growth at the nation's top 300 banks as the number of mergers and acquisitions almost doubled.

Growth in acquired deposits, however, was smaller than a year earlier, when two large combinations had a tremendous impact. Acquired deposits increased 7.3% to $46 billion in 1987, compared with a 156% jump to $42.9 billion in 1986. The $46 billion figure is the largest since the *American Banker* began tracking mergers in 1980.

Partial acquisitions, such as branch purchases, are included in the newspaper's fifth annual survey of mergers and acquisitions by the top 300 U.S. banks. The survey also covers holding company acquisitions completed last year in which the lead banks were not affected by the mergers.

Total deposits of the top 300 was $1.4 trillion at yearend, an increase of $60.6 billion, or 4.4%, over yearend 1986. Fully 76% of that deposit growth came through mergers. In 1986, 40% of the deposit gain of $106.3 billion came through mergers, compared with only 17% of $97.4 billion in 1985.

Furthermore, 73 of the top 300 banks were involved in mergers in 1987, taking over the deposits of 243 banks. Both figures are new highs in this decade of consolidation.

In 1986, 65 banks acquired deposits of 123 banks, compared with 44 banks acquiring the deposits of 137 in 1985. The 156% jump in acquired deposits in 1986 can be attributed to two large California combinations. Wells Fargo Bank NA merged with Crocker National Bank, and Sanwa Bank California merged with Lloyds Bank California; the deals accounted for 41% of acquired deposits.

Since 1980, 1,004 banks have been acquired or merged, with deposits totaling $165.7 billion.

Texas Was Merger Center

In 1987, Texas voters approved a constitutional amendment that permitted limited branch banking. Banks were allowed to open as many as three new branches in each county, and bank holding companies were permitted to consolidate subsidiary banks into branches, as long as they retained a charter in each county. Several holding companies took advantage of the law, making Texas the most active merger state in the nation last year.

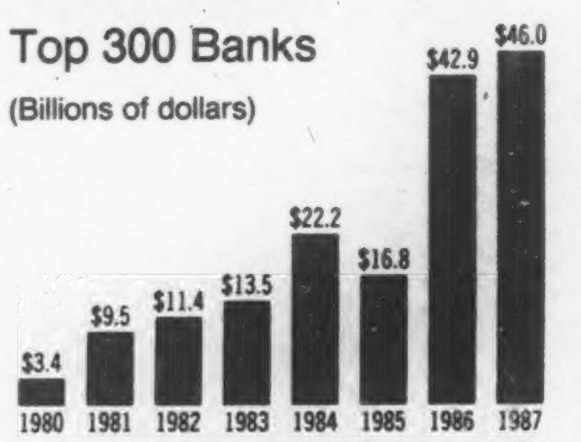
Ten of that state's banks acquired 90 other banks with $12.1 billion in deposits. That accounted for 26.3% of the total deposits taken over by the top 300 banks. Two banks — Texas Commerce Bank Houston NA and First RepublicBank Houston NA — merged 45 banks with $4.2 billion in deposits.

Texas Commerce merged 26 of its Houston-area banks and acquired four others in 1987. The 30 banks added $2.2 billion to the bank's deposits, moving it up eight places to 42d place in the nation. Texas Commerce Houston remained second in the state.

Deposits Acquired Through Mergers

Top 300 Banks

(Billions of dollars)



Source: American Banker

First Republic jumped 107 places to rank 102d in the nation and fifth in Texas. First Republic acquired $776 million-deposit InterFirst Bank Houston and merged 14 other First Republic banks, boosting its deposits to $1.9 billion. In 1986, the bank was the 10th largest in Texas.

AN American Banker SPECIAL REPORT

Texas Commerce Bank Dallas NA also made a significant jump through merged and acquired deposits. The bank merged 12 banks with $1.2 billion in deposits and moved into the top 300 at No. 236, up from 496 a year earlier. Eleven of the merged banks were Texas Commerce banks in Dallas, Garland, and Irving. The other was the $224.8 million-deposit Unitedbank-Houston. All told, Texas Commerce banks in the top 300 merged or acquired 44 banks with deposits of $3.5 billion.

MBanks of Dallas, El Paso, and Houston consolidated their banks as well. Those three banks acquired or merged 22 banks and brought in deposits of more than $2.4 billion.

The bank that acquired the most deposits last year was Michigan National Bank, Farmington Hills, which merged 16 other Michigan National banks with deposits of $7.1 billion. Michigan National was followed by First Bank NA, Minneapolis, which merged 13 banks with $5.0 billion; First RepublicBank Dallas NA, which acquired the $3.5 billion-deposit InterFirst Bank Dallas NA; Citizens and Southern National Bank of Florida, Ft. Lauderdale, which merged 14 banks with $3.5 billion in deposits; and First Union National Bank of Georgia, Atlanta, which acquired 9 banks and $2.6 billion in deposits. ■

When it comes to progressive banking, Delaware legislators really have their acts together.

ENACTED
OFFICIAL
APPROVED
PASSED
AUTHORIZED

As a result, you'll find Delaware banking legislation among the most advanced in the nation. So advanced, in fact, we've removed usury ceilings and established a regressive bank franchise tax as low as 2.7%. We've created more advantages for all banking operations in Delaware by allowing broader powers for dealing in securities. We've even expanded the opportunity for interstate banking.

Our laws, however, are not the only example of our innovative approach to business. Delaware offers an accessible state government, which allows decisions to be made quickly and fairly and information easy to obtain. Plus, a growing, productive labor force, and a strategic location.

So if you think you might want to locate in a state where legislators really have their acts together, call (302) 736-4271 and discuss it with Carolyn DePew of the Delaware Development Office. She'll tell you all about the progressive state your banking operations could be in.

American Banker follows the bank of charter when banks merge. The surviving bank is the bank whose charter has survived the merger.

[1] These totals represent the "deposits acquired through merger" in the respective states. In calculating the "deposits acquired through merger", when the affiliated banks of a holding company merge under the charter of the smaller bank, American Banker counts the deposits of the smaller of the two institutions merged. This avoids overstating the impact of internal mergers. Please note: the 1987 data column has total deposits as of 12/31/86, and the 1986 data column has total deposits as of 12/31/85.

COMMENT

Nonoperating Losses Crimp Thrift Profits

By SANFORD ROSE

For the past five years, the fortunes of the average "good" savings and loan (read: an association not bedeviled by insoluble loan loss problems) have depended rather heavily on nonoperating results. In 1983 and 1984 operating profits were either nonexistent or nearly so. The very modest overall profits achieved in those years reflected gains on the sale of either bonds or loans, which, according to thrift accounting rules, are recorded as nonoperating income.

Operating profits improved in 1985 and 1986. Nonetheless, nonoperating results still contributed between 25% and 40% of the pretax net.

Last year witnessed a further gain in operating income. But for the first time in the last five years, nonoperating results were negative. That is, nonoperating expenses, which include such items as mark-to-market losses on mutual fund investments and loan-loss provisions, exceeded nonoperating income.

In consequence, the return on assets at 70 predominantly eastern

Seattle-First Wins First Round in Effort To Collect $55 Million Insurance Claim

By MICHAEL J. PARKS

Litigation

SEATTLE — Seattle-First National Bank emerged victorious in the first phase of a battle to collect on a $55 million directors' liability policy issued by National Union Fire Insurance Company of Pittsburgh, Pa., in 1982.

On Friday, a six-member jury in U.S. district court here rejected National Union's contention that Seafirst's management had covered up the bank's financial difficulties in September 1982 on the application for the policy.

The verdict sets the stage for a second trial, during which Seafirst will try to prove that National Union acted in bad faith in rejecting the claim. Seafirst would be entitled to double the policy limits, or $110 million, if it can prove that case.

National Union indicated that it is likely to appeal the jury's verdict. "Our case was based on the strong belief that Seafirst did in fact misrepresent and conceal many important facts in applying for the insurance policy," spokeswoman Gayla Brewer said.

The lawsuits grew out of Seafirst's near collapse because of sour energy loans it had acquired in the early 1980s from Penn Square Bank, Oklahoma City. Penn Square failed in 1982. It had also brokered energy loans to the Continental Illinois National Bank and Trust Company of Chicago and Chase Manhattan Bank.

Seidman Rebuts First Republic Cost Estimates

FDIC Chairman Predicts Bailout Under $2 Billion

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Federal Deposit Insurance Corp. Chairman L. William Seidman tried on Monday to refute rumors about the cost of righting the stumbling First RepublicBank Corp., predicting that the final agency tab will be less than $2 billion.

"We don't see losses that would reduce the fund by $5 [billion] or $6 billion," Mr. Seidman said, responding to press reports estimating the cost of bailing out the $33.2 billion-asset First Republic, based in Dallas. "We don't see any need to get any additional funds from the Treasury for the banking system," he said later.

The FDIC chairman added that for the first time his agency may lose money this year. At most, a loss caused by First Republic would "certainly be less than $1 billion," when offset by other agency income, he said. The FDIC fund stands at $18.3 billion today.

Timely Call Reports Demanded
Page 6

Mr. Seidman hosted 21 reporters for lunch Monday at FDIC headquarters here. He put forth and then rebutted five myths he said are being spread about the First Republic deal specifically — and, in general, the FDIC's approach to the banking crisis in the Southwest.

The FDIC pumped $4.5 billion into Continental Illinois National Bank and Trust Company of Chicago in 1984. As problem loans have been worked out and assets sold, the cost of the Conti-

IN THE NEWS

Irving Amends Merger Defense

NEW YORK — In their first communication in six months, Bank of New York Co. chairman J. Carter Bacot has asked Irving Bank Corp. chairman Joseph A. Rice to begin merger negotiations. Bank of New York has been trying to acquire Irving since September. Mr. Bacot noted Irving's talks with third parties, disclosed last week, and urged discussions with his firm "in the best interests of your shareholders."

Meanwhile, Irving amended its shareholder rights plan to deter a "street sweep" of its stock. The change was adopted in case Bank of New York drops a current tender offer and instead buys stock in the market or through privately negotiated sales. Existing Irving shareholders could buy additional shares at favorable prices if an unwanted bidder acquired more than 5% of the company's stock. The previous version of the so-called "poison pill" focused only on tender or exchange offers.

Salomon High on BankAmerica

NEW YORK — Salomon Brothers Inc. has placed BankAmerica Corp. on its list of recommended stocks, knocking Bankers Trust New York Corp. off the list. Salomon recommends 45 stocks, but only two are bank stocks: J.P. Morgan & Co. and BankAmerica. Salomon said BankAmerica's stock has more potential to rise in price than Bankers Trust's stock, based on Salomon's expectation of favorable earning news for the next few quarters. Salomon predicts San Francisco-based BankAmerica will earn $2.25 per share in 1988, compared with a loss of 56 cents per share in 1987.

Bank Failures Reach 44

WASHINGTON — The national total of federally insured bank failures rose to 44 on Friday when the First National Bank of Del City, Okla., was closed. The Federal Deposit Insurance Corp. arranged a transfer of the failed bank's $26.2 million of insured deposits to Lincoln National Bank, Oklahoma City. About $29,000 in 40 accounts were not covered by federal insurance.

Riggs Sells Foreign Loans

WASHINGTON — Riggs National Corp. here said it sold $44.8 million in Third World loans to another financial institution for $19.8 million in cash. The $6.15 billion holding company did not reveal the name of the company that bought the loans, which were in Brazil, Ecuador, and the Ivory Coast. Riggs said the sale will give it an after-tax gain of $2.4 million in the first quarter.

Connecticut Thrifts to Merge

WALLINGFORD, Conn. — Dime Savings Bank of Wallingford said it would acquire City Savings Bank of Meriden for $16 per share in cash, or about $25.4 million. Dime, with assets of $439 million, will create a holding company to buy the $147.7 million-asset City Savings.

Big Board Up, Firms Sag

NEW YORK — Net revenue at the New York Stock Exchange in 1987 soared to $34.1 million, up 54.3% from $22.1 million in 1986. However, profits at the exchange's 409 member firms that did business with the public dropped 97% after taxes — to $84 million in 1987 from $2.9 billion in 1986.

— Compiled by Dennis P. O'Connell

An American Banker Survey

Top 100 Firms Account for 60% of Employment

By L. MICHAEL CACACE

NEW YORK — Three out of five people that work in the banking industry are employed by the nation's top 100 commercial bank holding companies.

For the first time in its annual bank holding company review, the *American Banker* compiled employment data for the top 100 firms and compared them with employment figures for the industry. The tally showed that the top 100 banking firms employed 60.7% of all persons at commercial and savings banks at the end of 1987. A year earlier, the top 100 firms accounted for 58% of industry employment.

Top 100 Holding Companies
Tables Begin on Page 13

Acquisition and merger activity appears to be the main reason for the increased share at the leading firms. The top 100 firms in assets employed 1.053 million people at yearend 1987, up 4.1% from 1.012 million for the top 100 firms a year earlier. The number of people working in the industry was unchanged at 1.736 million, according to the U.S. Department of Labor's monthly "Payroll Survey."

Republic New York Corp. had the most assets per employee, according to the *American Banker*'s survey of the top 100 banking concerns. Republic, the nation's 28th largest banking company with assets of $22.4 billion, had 3,700 employees, or $6.1 million in assets per employee, on Dec. 31.

The company with the fewest assets per employee was State Street Boston Corp., the nation's 70th largest holding company. The firm had 6,943 employees and $7 billion in assets, or $1 million in assets per employee on Dec. 31.

Today's review consists of four major statistical listings: the top 100 bank holding companies in total assets, a geographical breakdown of the top 100 companies showing their total assets and employees, the top 100 bank

Fidelity Institutional Portfolios. Investment performance and diversification for today's trust market.

Fidelity Institutional Portfolios is a comprehensive investment management program designed to provide bank trust departments a convenient, cost effective way to meet the complex demands of today's trust market.

Comprised of a diversified line of no load equity, fixed-income, and money market funds, the program lets you choose among such funds as: Fidelity Overseas Fund, Equity Portfolio: Income, Fidelity Institutional Cash Portfolios, nine different bond funds, and several revenue sharing funds. The program frequently expands to include new investment options and services to help you respond quickly to changes in both financial markets and client needs.

Whether you use these funds as a package or individually to complement your existing investment management capabilities, your partnership with Fidelity Investments will provide proven investment management expertise, extensive operational and marketing support, and responsive client service.

For more complete information about the program, including fund prospectuses covering management fees and expenses, please contact your local Fidelity Institutional Services Representative or call Joseph T. Grause, Jr., Vice President, in our Boston office at 1-800-345-5033, extension 5525. In Massachusetts, call collect 617-570-5525. COMMENT

➜ Continued from Page 1

and midwestern thrifts — representing 4% of industry assets — that are surveyed by Olson Research Associates of Greenbelt, Md., tumbled from 72 basis points in 1986 to 43 basis points last year.

In 1986, thrifts took the opportunity afforded by sharply declining interest rates to realize as many gains as possible in the loan and bond portfolios. Nonoperating income ballooned from 5.7% to 8.1% of gross operating revenue. But the associations were merely borrowing from the future.

Expanded Numerator

Last year, rates continued dropping, albeit less rapidly, but there were apparently few additional profits available for booking. Nonoperating income nosedived. At the same time, nonoperating expenses continued to rise at a strong clip. Ergo the squeeze on below-the-line or nonoperating profitability, with its predictable impact on overall results.

The thrift plight is illustrated by the behavior of the ratio of net overhead to earning assets. At banks, the numerator of this ratio is noninterest expense minus noninterest income. At savings and loans, the numerator includes, in addition, nonoperating profits and expenses.

Influenced by increases in operating costs resulting in part from entry into such expense-intensive activities as nonmortgage consumer lending as well as by the rise in loan-loss provisions, the thrift overhead burden has grown substantially in the last five years. The bank burden, which excludes loan-loss expense, has lightened.

But in 1986, the sharp increase in bond and loan-sales profits caused the thrift overhead ratio to level off at around 1.15%. With the decline in such profits last year, the ratio once again surged, rising to 1.55%. This increase overwhelmed the modest improvements in both the spread and the net interest margin.

Losing Efficiency

Although the thrift margin continues to improve — at 2.26% of earning assets in 1987, it was more than double what it had been five years earlier — progress is limited by the high and growing level of nonearning assets and by the increasing reliance on borrowed funds.

The ratio of earning to total assets now stands at only 90%. Five years ago, it totaled 92.3%. Unencumbered by float, thrifts used to be more efficient asset utilizers than banks. As the level of impaired assets has risen, however, many thrifts have become less efficient than the banks, which at the same time have made considerable progress in solving their float problems.

The proportion of thrift assets funded with borrowed money rose to 24.2% last year, a five-percentage-point increase over 1986 and nearly a ten-percentage-point rise over 1983. Most of the five-year increase in borrowed funds has been in the short-term category.

Thrifts are borrowing more because of difficulties in attracting and retaining savings deposits. Last year, savings deposits funded only 68.4% of assets compared to 83.2% five years ago.

To be sure, savings increased 6.5% last year, but that was only because of the interest credited to existing accounts. Net of this interest, savings money actually dropped, as it has in each of the last four years. Quite obviously, the relative decline in savings deposits and the increased reliance on short-term borrowings make thrift profits much more vulnerable to the threat of rising interest rates.

At the Olson sample of thrifts, mortgage loans as a percent of total assets amounted to 70.7% in 1987, about the same as in 1986. Total loans increased to 79.7% of total assets, the first increase in five years. Nonmortgage loans continued to rise, reaching a five-year high of 9%.

Investment securities fell from 12.3% to 10.3% of assets, a five-year low. Of particular note is the anemic yield on investment securities — 6.47%. This is obviously the consequence of having cleansed the portfolio of most of the high-yielding bonds acquired in previous years.

Smaller Thrifts Recover

While thrift returns are in the aggregate quite poor, the picture varies a bit by asset size. The very small savings and loans appear to be doing much better than the larger institutions. Return on assets at the 22 thrifts with less than $100 million in assets reached 52 basis points in 1987, a gain of 10 basis points over 1986.

However, ROA at the 32 associations with between $100 million and $500 million in assets plunged from 98 to 52 basis points. And at the large associations — 16 with assets in excess of $500 million — the ROA went from 68 to 41 basis points.

Suspect Formula

Based on the data presented above, there is much reason to question the future viability of a substantial segment of the savings and loan industry. In the short run, the industry profit picture is clouded by the specter of rising rates and by the impact of FASB 91, which forces thrifts to amortize loan fees instead of taking them immediately into income. In the longer run, the basic profit formula of the type of thrift included in the Olson sample seems suspect.

Although the Olson group of thrifts have plenty of bad loans — scheduled items represent 35% of net worth — credit woes are not nearly as serious as they are at the mortally wounded associations located primarily in the central and southwestern parts of the country and therefore not included in this sample. Nor does the sample include any of the large California thrifts — the mortgage-banking entities — many of which are faring handsomely.

Rather, the Olson sample of 70 is composed for the most part of traditional thrifts located in areas enjoying relatively buoyant economic conditions. Their basic modus operandi is to borrow short and earmark a high proportion of these funds to home mortgages and consumer loans, in the hope of profiting sufficiently from thin credit spreads and the return from mismatched maturities.

Despite the fact that we are currently in the benign phase of the interest rate cycle — rates having trended down for most of the past five years — the returns from pursuing a basically traditional strategy are quite disappointing. Spreads at the Olson group of thrifts approximate 200 to 250 basis points, appreciably lower than the average bank spread of around 330 basis points. And who knows what portion of that already inadequate thrift spread is attributable to mismatch earnings which will evaporate once rates begin an upward climb?

It is hard to blink the notion that there isn't enough opportunity to profit from the traditional thrift business. There is just too little risk in conventional real estate lending. And without very much risk, there cannot be very much profit.

On the other hand, there is just too much risk in many types of nontraditional real estate lending, as should now be obvious to failed thrifts as well as to some marginally profitable associations in the Olson group. And there is also too much risk in attempting to supplement the earnings from conventional activities with very expansive yield-curve gambles.

Four Imperatives

The upshot would seem to be that (1) thrifts must confine their maturity mismatches to the short end of the yield curve; (2) they must also severely limit the proportion of assets earmarked to such activities as acquisition and development lending; (3) they must continue expanding in the nonmortgage consumer lending area; and (4) they must become familiar with the new initiatives in commercial lending, which emphasize loan pooling to reduce borrower covariances and thus raise risk-adjusted returns.

The last imperative is especially important. Prosperity, nay survivability, for many associations depends ultimately on the capacity to diversify into areas, especially the business credit area, where there is more risk than in home mortgage lending, but where the risks are still eminently controllable if managed in an intelligent and sophisticated fashion. ■

LETTERS TO THE EDITOR

Underwriting Requests Considered on Merit

To the Editor:

I am writing to clarify a report in the story entitled "Chase Securitizes Commercial Real Estate" (March 22, page 2).

The story reports that national banks are likely to file applications to underwrite assets bought from third parties, not originated by the bank itself. The story also notes that the Comptroller's office is concerned that the bank owns the asset, not how that ownership came about.

I did not say, however, that the Comptroller's office would approve all such applications. As always, we will consider each application on its merits before making a decision. I would appreciate it if you would make your readers aware of this correction.

J. Michael Shepherd
Senior Deputy Comptroller
Office of the Comptroller

Washington, D.C.

Something to Say? We Want to Hear

The *American Banker* welcomes letters from our readers.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number.

Holding Company Review

This review is a complete look at the top commercial banking firms in 1987, with comparable data for 1986. Included are rankings of the top 100 bank holding companies in assets; the top 100 bank holding companies in primary capital; and the top 100 firms in net income for 1987. In addition, the review contains a geographical breakdown of the top 100 firms in assets and a summary table which identifies the nation's superregional banking firms.

Sources of Data: American Banker questionnaire, and banks' yearend earnings releases. **Assets** and **Deposits** include all consolidated subsidiaries, both domestic and foreign. Data for 1986 are as reported in 1987 and have not been restated for acquisitions, mergers, or changes in accounting principals. **Banks Controlled:** includes only domestic commercial banks controlled, according to definitions of Bank Holding Co. Act. **Branches Controlled** are domestic commercial bank branches only. **(a)**—Agreed to acquire United Bank, Phoenix, from Union Bancorp., Los Angeles, on 1/28/88. **(b)**—Acquired Allied Bancshares, Inc., Houston on 1/29/88. **(c)**—Agreed to acquire Barclays Bank of California, San Francisco, from Barclays Plc, London, on 1/15/88. **(d)**—Acquired Central Bancorp. Inc., Cincinnati, on 2/29/88. **(e)**—On 1/1/88, Fleet Financial Group, Providence, and Norstar Bancorp,, Albany, N.Y., merged to form Fleet/Norstar. **(f)**—On 2/29/88, acquired Fidelcor, Philadelphia. **(g)**—On 2/29/88, acquired Shawmut Corp., Boston. **(h)**—Acquired by First Fidelity Bancorp., Newark, on 2/29/88. **(i)**—Company is in the process of recapitalizing, and yearend 1987 data were not available. Data for Sept. 30, 1987, were used. **(j)**—Acquired by Hartford National Corp., Conn., on 2/29/88. **(†)**—Revised since publication on 2/1/88.

An American Banker Survey

The Top 100 Firms Account for 60% of Employment in Banking

Continued from Page 3

holding companies in primary capital, and the top 100 banks and bank holding companies in net income for 1987. Summary tables identify the nation's superregional firms, the 30 banking firms with the largest losses, and the large commercial banks that are not controlled by a U.S. bank holding company. Tables begin on page 13.

The government's "Payroll Survey" found that the finance industry — which includes commercial and savings banks, savings and loans, insurance companies, mortgage firms, and credit companies — employed 3.278 million people at yearend 1987, up 4% from 3.152 million a year earlier. Thus, the top 100 commercial banking firms account for 32% of all workers employed in the finance industry.

The *American Banker* survey also found that for the third year in a row, growth in primary capital at the nation's top 10 banking companies grew substantially faster than assets. Primary capital increased 20.6% at the top 10 banks last year, while assets rose by 3.4%.

In 1986, primary capital rose 15.8% at the top 10 firms, compared with a 7.8% gain in total assets.

The superior growth in primary capital was attributed to the sharp rise in the allowance for loan and lease losses at the top 10 firms last year. Such allowances — which account for more than 32% of primary capital at the top 10 firms — jumped 126% last year, offsetting declines in equity capital and representing all the gain in primary capital at these institutions.

The sharp rise in the allowance for loan and lease losses was attributed to the special reserves set aside for potential losses on problem loans to lesser-developed countries.

For the top 10 firms, the allowance for loan losses totaled $22.8 billion, up $12.7 billion from $10.1 billion in 1986. Primary capital rose by $12 billion at the top 10 last year to $70.3 billion, up from $58.3 billion in 1986.

The *American Banker* surveyed the 200 largest bank holding companies and banks in the United States to prepare its rankings. Listed below are some of the more important findings.

- Total assets of the top 100 bank holding companies were $2.027 trillion on Dec. 31, up 5% from $1.931 trillion a year earlier.
- These firms had $1.528 trillion in deposits, up 14.6% from $1.333 trillion on Dec. 31, 1986. They controlled 1,352 domestic banks with 22,685 domestic branches at yearend 1987.
- The top 100 earners among banks and bank holding companies had combined net income of $6.9 billion in 1987, down 47% from $13 billion among the top 100 earners in 1986. The plunge in earnings was attributed to the large losses posted last year by many firms that took special loan-loss provisions against Third World loans.
- The three largest losses in the banking industry were sustained by Manufacturers Hanover Corp., New York, which lost $1.14 billion; Citicorp, New York, which lost $1.138 billion; and BankAmerica Corp., San Francisco, which lost $955 million.
- The number of superregional banking companies in the United States increased by 10 last year to 48, as defined by the *American Banker*. A superregional banking firm is a non-money center banking company that is ranked among the top 100 banking firms in total assets and that has merged across state lines to establish a full commercial banking presence in another state. ■

Dear Reader,
How Are We Doing?

The *American Banker* wants to make sure our annual bank holding company review and tables meet your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

(1.) How would you **change** the survey to make it more useful? What would you add?

(2.) What do you like **best** about the survey?

(3.) What do you like **least** about it?

(4.) How do you use the survey in your work?

American Banker

Three important factors in selecting a data processing company.

Responsiveness
Averaging over 15 years of experience, M&I's account managers specialize in results. Dedicated to customer satisfaction, these banking veterans coordinate the talents of the entire M&I support team. Together our product support representatives, data communications analysts, and customer service specialists produce the high level of service to which you are entitled.

Technology
Flexibility is inherent to the design of M&I software. Its sophisticated database architecture and definable features allow you to tailor our products to meet your specific needs. Six of the 25 largest U.S. financial institutions utilize M&I's Integrated Banking System*. This same software runs in the service bureau environment and can deliver advanced technology to you.

Commitment
For more than 20 years, M&I has been supplying the financial industry with quality data processing services. Over 400 financial institutions nationwide with assets ranging from $3 million to $6 billion receive reliable data processing services from M&I. For more information, call Joe Delgadillo, Vice President/Financial Services Group at 1-800-558-7707 (in Wisconsin call 1-800-242-9225) extension 2329.
